Deployed in Release Number	SalesForce Issue Number	SalesForce Priority	Revised Issue Summary	Release Note Communication
1.10.8	8126749	Minor	Validation report not showing the incorrect flight date	Area: ISWEB Issue: There was an issue while parsing PAX IS-IDEC file. Currently, if invalid value is provided for the field flight date it is correctly failing in validation process. But in the validation report no value is printed for this field. Instead it should print the invalid value as provided in IS-IDEC A) After further analysis, we found that the same issue exists in the validation report (R2) generated for the following fields submitted using IS-IDEC: I) Billing Category PAX: 1. Flight Date field of non-sampling coupon record 2. Flight Date field of non-sampling BM/CM Coupon breakdown 3. Flight Date field of sampling coupon record II). Billing Category CGO: 1. AWB Date field of AWB Record 2. Date of Carriage (or Transfer) of AWB Record 3. Transfer Date of RM AWB breakdown Record 4. Date of Carriage (or Transfer) of BM/CM AWB breakdown Record While testing, we found following three more issues

© Copyrights Reserved. IATA 2017

1.10.8	8126749	Minor	Validation report not showing the incorrect flight date	Currently, in validation report (R2) generated for PAX IS-IDEC, no value is populated in the column 'Error Level' if validation fails because of invalid/incorrect 'Your Invoice Billing Date'. Instead it should populate appropriate error level i.e. Rejection Memo, Sampling Form F, Sampling Form XF 2. For PAX FORM D, Form F and Form XF, there is a redundant validation performed for the field "Provisional Billing Month". Because of this redundant validation, additional incorrect error is printed in validation report (v2) 3. If invalid value is provided in the field 'flight date' for coupon breakdown of PAX Billing Memo or PAX Credit Memo, the system was not throwing any validation error Corrective Action:**:** The code has been fixed so that, 1. If any of the date fields mentioned above fails in validation, field value column in validation report will print value of the field as provided in IS-IDEC 2. In validation report (R2) correct error level will be printed if field 'Your Invoice Billing Date' fails in validation 3. Redundant validation performed on field "Provisional Billing Month" of PAX FORM D, Form F and Form XF is removed. 4. If invalid value is provided in the field 'flight date' for coupon breakdown of PAX Billing Memo or PAX Credit Memo, the system will throw validation error

Deployed in Release Number	SalesForce Issue Number	SalesForce Priority	Revised Issue Summary	Release Note Communication
1.10.8	8133607	Minor	Correctable Error	Area:ISWEB Issue: There is an issue in the IS-WEB PAX "Validation Error Correction" screen. This issue is applicable when NO value is provided in the input file for the field ‘Reference Field 1’ for EMD Rejection Coupon and it is updated as Error Correctable. Even though the value of field 'Reference Field 1' is corrected with valid RFIC code, the corrected value is not getting updated in database i.e. value of field remains blank. However, error correction status of this error is updated to ‘Error Correction Successful’ hence it is removed from the Error Correction screen. After this if a user is correcting field ‘Reference Field 2’, the system is throwing following error: “Reference Field 1 contains an invalid or blank RFIC value. This field cannot be corrected till Reference Field 1 is updated with a valid RFIC value." The same issue also exist when NO value is provided in the input file for the field ‘Reference Field 2’ for EMD Rejection Coupon but valid value is provided for ‘Reference Field 1’ Corrective Action: The code has been fixed to correctly update the value of field 'Reference Field 1' and ‘Reference Field 2’ upon error correction. After this fix, since the value of field ‘Reference Field 1’ will be updated correctly, the system will allow to update a value of field ‘Reference Field 2’.

Deployed in Release Number	SalesForce Issue Number	SalesForce Priority	Revised Issue Summary	Release Note Communication
1.10.8	8201639	Minor	ISWEB Session expires	Area: ISWEB Issue: Currently, when user is inactive on IS-WEB Home Screen for time more than session time out value (which is currently 30 minutes), in background the system is continuously generating session time out errors and logging the same in error log. This is happening till user interacts with the page i.e. when user refreshes the page. This unhandled error is leading to increase in size of log files on the server Corrective Action: The code changes have been done to handle session time out errors in above scenario. After this fix unnecessary log entries will not be generated for such errors

Deployed in Release Number	SalesForce Issue Number	SalesForce Priority	Revised Issue Summary	Release Note Communication
1.10.8	8201650	Minor	Invalid pages are requested on the SIS Web Server	Area: ISWEB Issue: Currently, when invalid web pages are requested on the IS-WEB e.g. https://isweb.iata.org/MSOffice/cltreq.asp, the system is throwing unhandled errors and unnecessary log entries are generated. This is leading to increase of size of log files on the server Corrective Action: The code changes have been done to handle invalid page requests. After this fix unnecessary log entries will not be generated for such errors
