

# IATA GSSA Registration Programme

A Partnership for Success

Evolving in a complex world of logistical solutions, today's GSSAs have brought innovative engineering to the cargo industry of modern times. With today's global economic shifts, the GSSAs' value is perceived in their ability to adapt quickly to market changes. Branching out into many intricate avenues, the GSSAs play a key role for many airlines, which, for economic and/or expanding operations purposes, outsource their total cargo activity to a GSSA.

To support this developing business relationship, IATA Cargo has introduced a global programme geared to the advancement of standards within a regulated business environment. IATA Cargo has therefore worked with FAGSA, the largest association of Cargo GSSAs in the world, to create the IATA GSSA Registration Programme.

IATA is aware of the importance of the GSSA's contribution to a successful cargo industry and therefore it has created a recognition award process, which enables GSSAs to attain an IATA certification. The internationally accepted IATA logo brings distinction and professional recognition and it will enhance any GSSA's image to prospective clients. The accreditation process considers the GSSA's ability to carry out those requirements, which are normally requested by most airlines when appointing a GSSA.

In a fast and competitive industry, an effective partnership with IATA will form an expanding community of professionals who will not only speed ahead of the competition, but who will also establish a known standard in industry professionalism. IATA Cargo is constantly seeking solutions today to meet the expected demands of tomorrow as they evolve within the many faceted intricacies of the cargo industry.
