1 Introduction

One of the key IATA priorities is to drive further standardization of ground operations process, with a primary focus on risk reduction in ground operations. Driving forces within this long-term strategy are two key industry initiatives: ISAGO and IGOM. To ensure IGOM/ISAGO ongoing relevancy and fit for purpose, multiple changes are made to both initiatives each year. This manual provides guidance to airlines and GHSPs, helping them navigate effectively through the changes.

This User Guide covers guidance for airlines and GHSPs to:

1. Create IATA Customer Portal account (user and company) as an entry point to any IATA service.
2. Onboard (airlines and GHSPs) on Operational Portal (Ops Portal) (with the purpose of declaring their gap analysis with IGOM and other industry standards as the Portal evolves)

Please note that if an operator provides ground handling services, they are considered a GHSP for the purpose of this User Guide (regardless of if they-self handle or offer the services to other customers). Therefore, any operator that has both functions – airline and GHSP, they will need to have two different profiles/accounts on the OPS Portal. Please read further guidance below.

Future revision of this User Guide will also include:

3. GHSPs onboarding on One Source to replace the ISAGO Registry. (Any GHSP already today can have its profile on ONE Source, however, for ISAGO registered/accredited GHSPs it will be mandatory to have a profile on ONE Source as the registration details will move from Registry to ONE Source)

2 General Definitions

This section describes and explains common definitions that will be used in this user guide.

IATA Customer Portal

IATA Customer Portal is an online platform that serves as a gateway for its member airlines, GHSPs, and other industry stakeholders to access various IATA services. The platform includes a variety of tools and resources, as well as easy access to a wide range of IATA products and services. Ops Portal and ONE Source are two of the many services available via the IATA Customer Portal.

IATA Operational (OPS) Portal

IATAOPS Portal is an online platform for airlines and GHSPs providing access to a range of operational standards on different ground handling requirements. The portal also facilitates the exchange of operational information between stakeholders. Through the OPS Portal airlines and GHSPs can easily declare their compliance with the IATA Ground Handling Manual (IGOM) provisions, the established standard for ground handling worldwide. In addition, stakeholders can record and exchange information as well as post any variations to IGOM in their ground handling requirements.

Currently, the OPS Portal includes:	<ul style="list-style-type: none">▪ IATA Ground Handling Manual (IGOM)
Throughout 2024, the OPS Portal will be expanded to also include:	<ul style="list-style-type: none">▪ Airport Handling Manual (AHM) Chapter 11 Training▪ Organization and Management (ORM)▪ Cargo and Mail Handling (CGM)

NOTE: Terms IGOM Portal and OPS Portal are equivalent. The Portal started as IGOM Portal and was renamed to OPS Portal as a decision was made that more industry requirements shall be part of the portal online tool.

User account

An individual account that a person needs to create to access IATA Customer Portal.

Company account

An organizational account that belongs to a company. One company account for each physical location of an organization. Example, if a GHSPs called "GroundServe Inc." has operations at only two locations – BRU and AMS. Then, GroundService Inc. will have two company accounts, one for each location based on their physical addresses at those locations.

Another case is for Flybetter airline that has one physical location/address for BCN airport, as an operator and GHSP. The Flybetter airline will also have two company accounts with same physical location, however two different profiles with two different account record types: one as an airline and second one as GHSP (airline supplier). Read further guidance below.

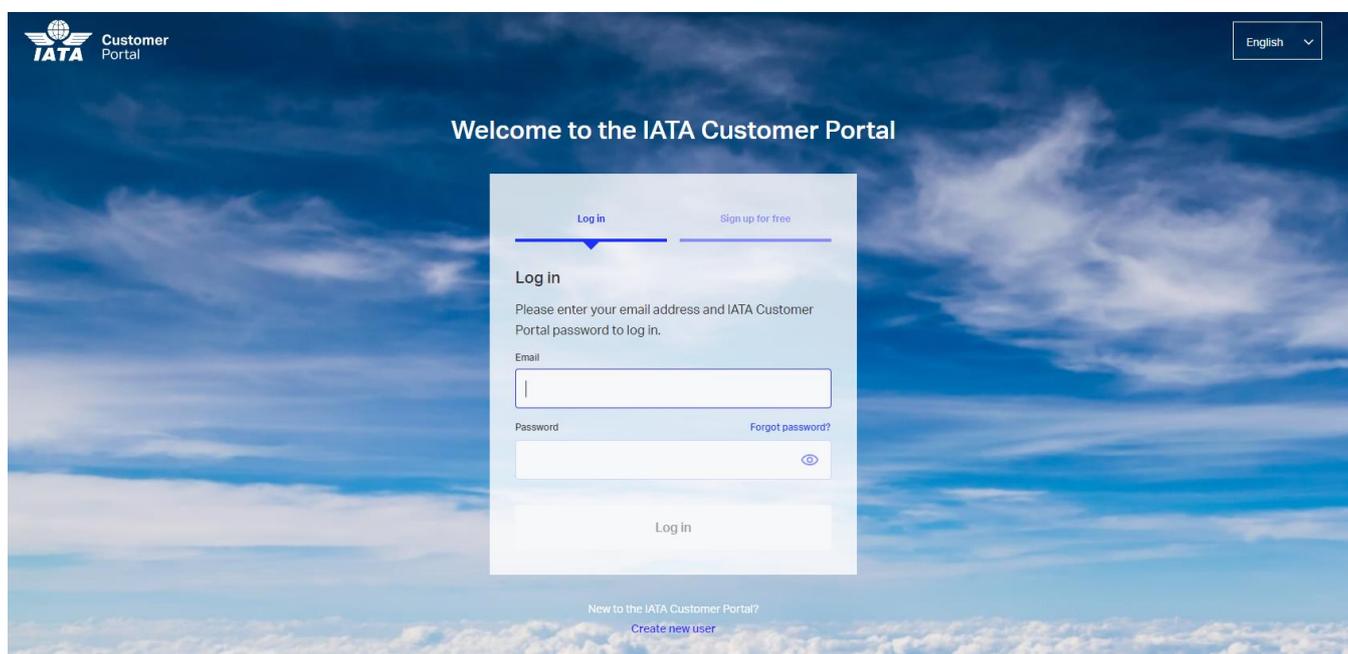

3 IATA Customer Portal

3.1 Accessing IATA Customer Portal

IATA Customer Portal can be accessed using a web browser on a computer or a mobile device. For the best user experience, using a computer is recommended. No other components or software are required other than an active internet connection.

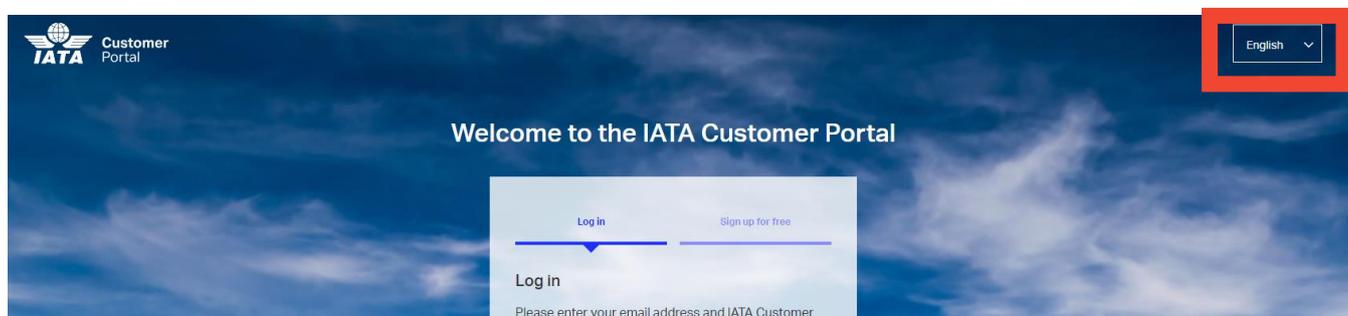

The IATA Customer Portal can be accessed at: <https://portal.iata.org/s/>

Upon clicking on the above URL, you will see a screen as below:

3.2 Changing language

You have the option to change the language of the IATA Customer Portal should you need. To change the language, simply click on the box on the top right corner and select your desired language from the dropdown.

The webpage will refresh and display information in your chosen language.

Note:

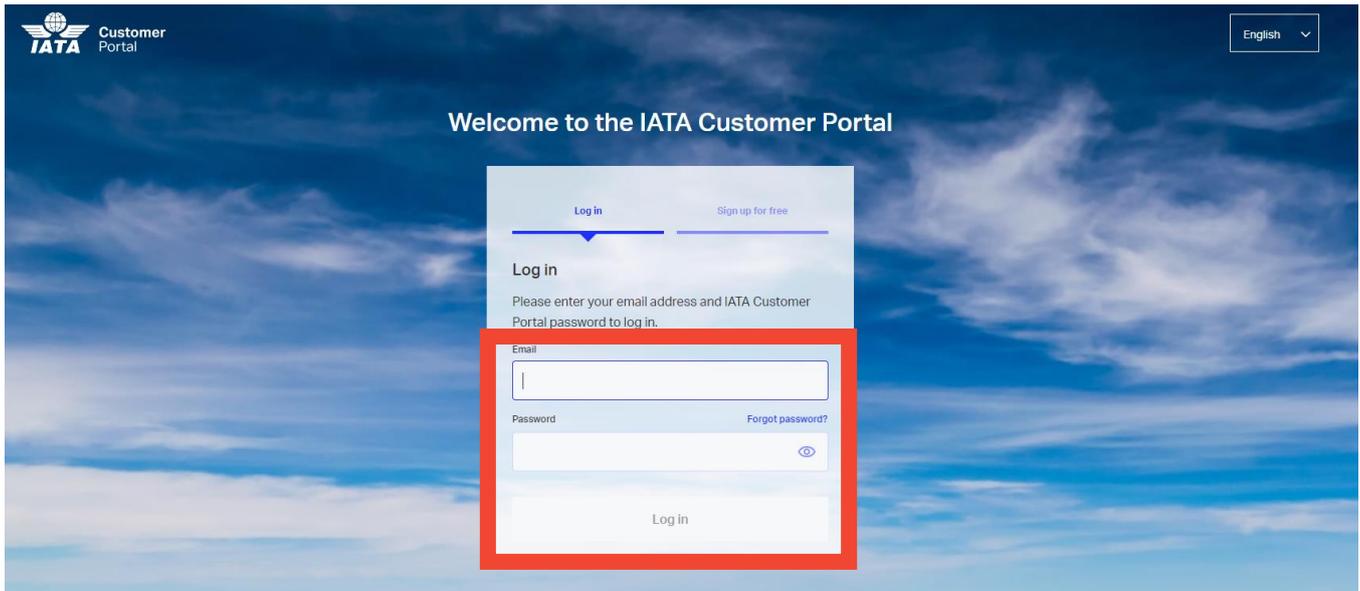

1. IATA Customer Portal is not yet available in all languages.

2. Although the language of the IATA Customer Portal can be changed, please **only use English** while entering requested information.

3.3 In case you do have an IATA Customer Portal account

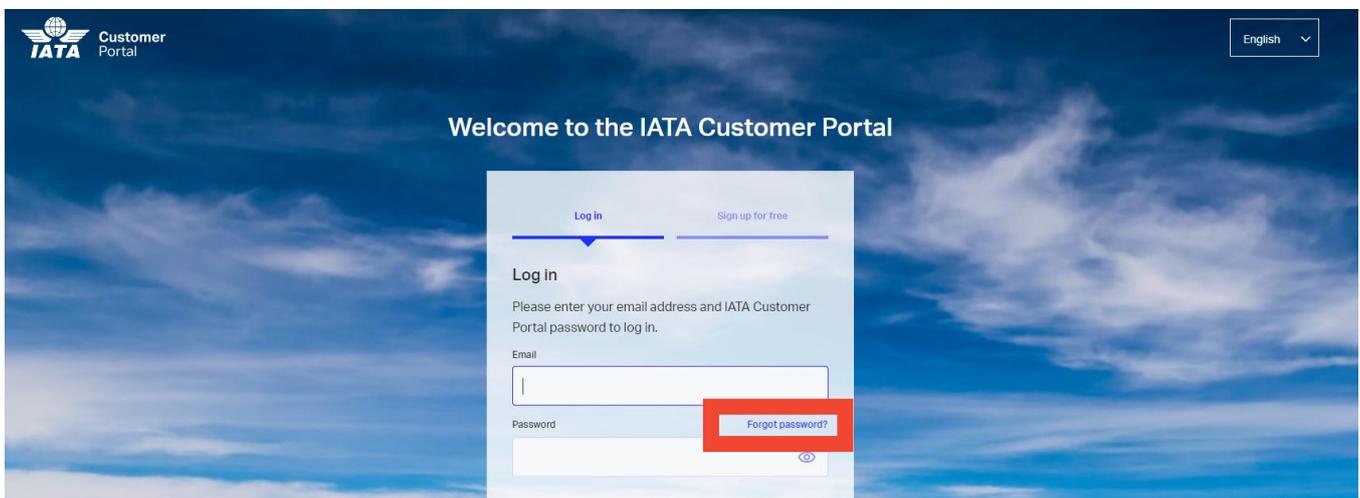

You can login to IATA Customer Portal by entering your **email** address and **password** in the fields highlighted below. And then click on **Log In**.

If you already have a user account and are able to access IATA Customer Portal successfully, you do not have to do anything at this time.

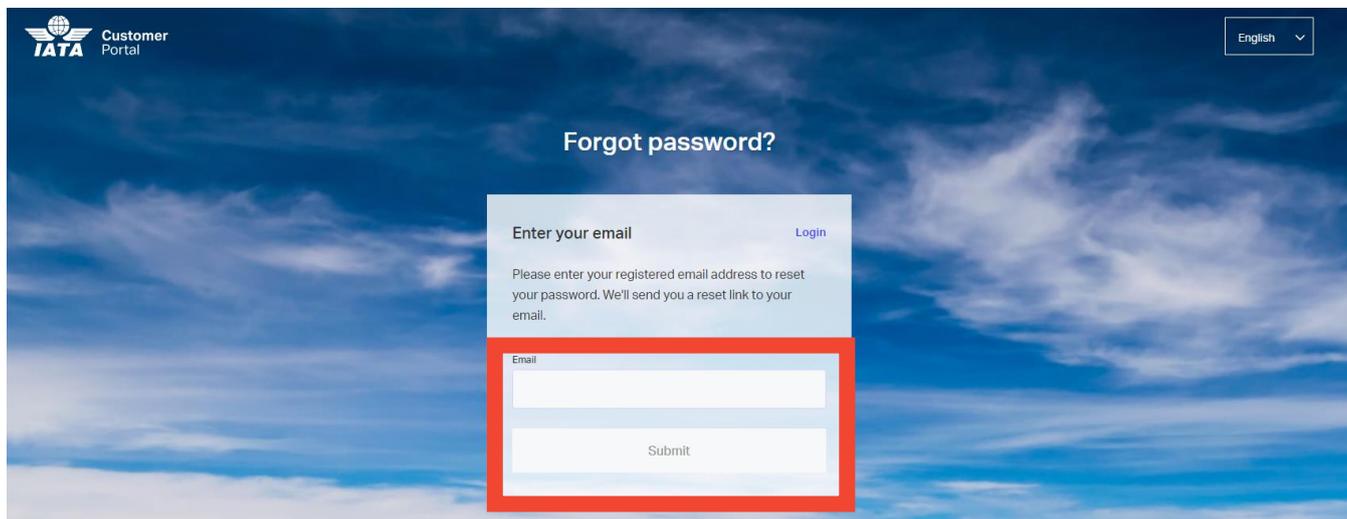

3.4 Check if you have an IATA Customer Portal account / Recover your account

If you are unsure whether you have an IATA Customer Portal account or if you forgot your password, click on **Forgot Password?**

Upon clicking on the **Forgot Password?** you will be redirected to a new webpage. You will be asked for your email address to reset your password. Enter your email address in the highlighted box below and click on **Submit**.

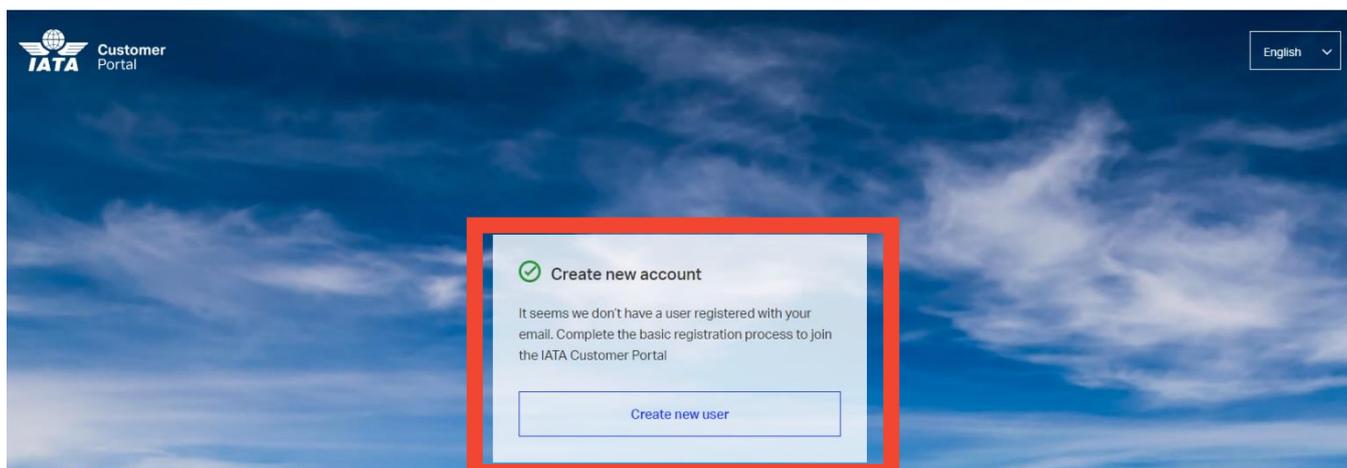

3.4.1 Reset your password

If you do have an account for IATA Customer Portal, you will receive an email with instructions to reset your password. Please follow the guidelines in the email to reset your password.

Once the password is reset, try to log in as in [3.3](#). If you are able to successfully login to IATA Customer Portal, you do not have to do anything else at this time.

3.4.2 No account found

If you do not have an IATA Customer Portal account, you will see the following screen. In this case, you can proceed to [3.5](#) to create an IATA Customer Portal account.

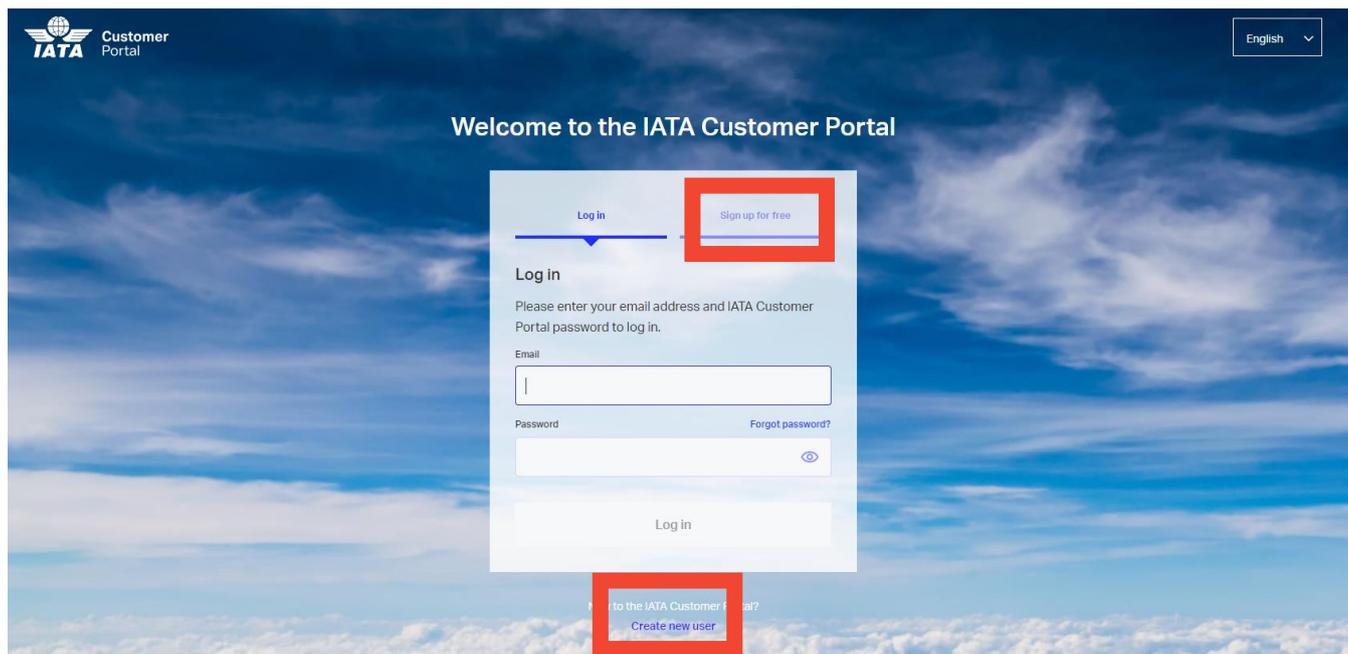

3.5 In case you don't have an IATA Customer Portal account

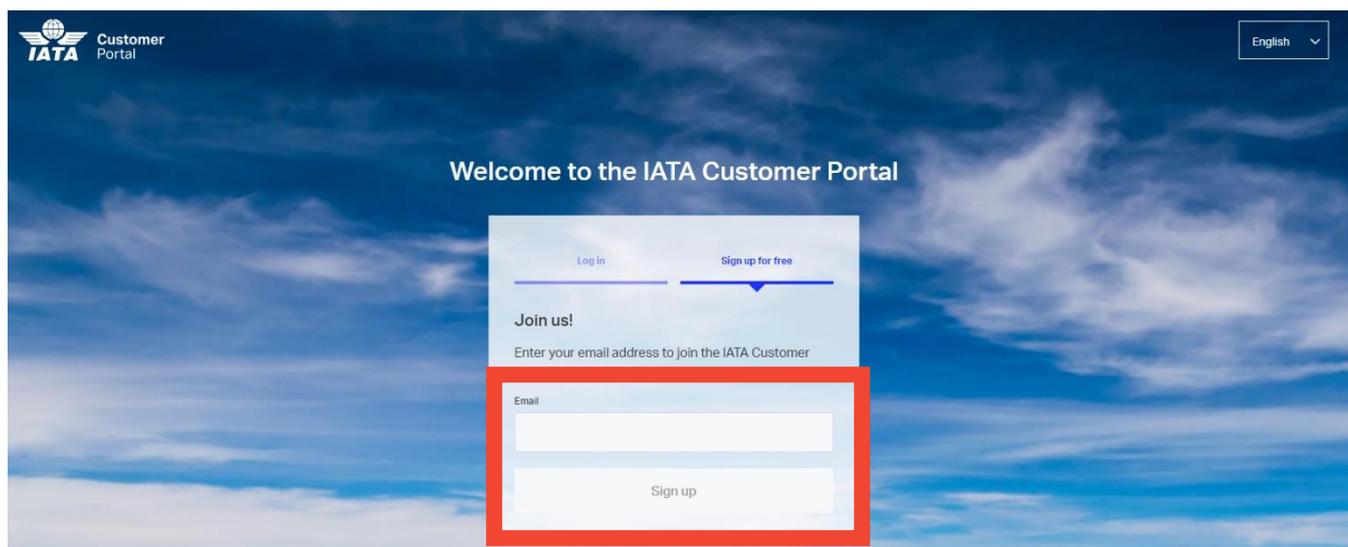

If this is the first time you set up a user account, you will need to follow the steps below to create a new one.

3.5.1 Create a new user account

To create a new account, click on either **Sign up for free** or **Create new user**

Upon section, you will be asked to provide your email address. Please provide your **professional** email address (work account) and click on **Sign up**.

You will be presented with the the following screen and two options: **Work** or **Personal**. Please click on **Work** to proceed.

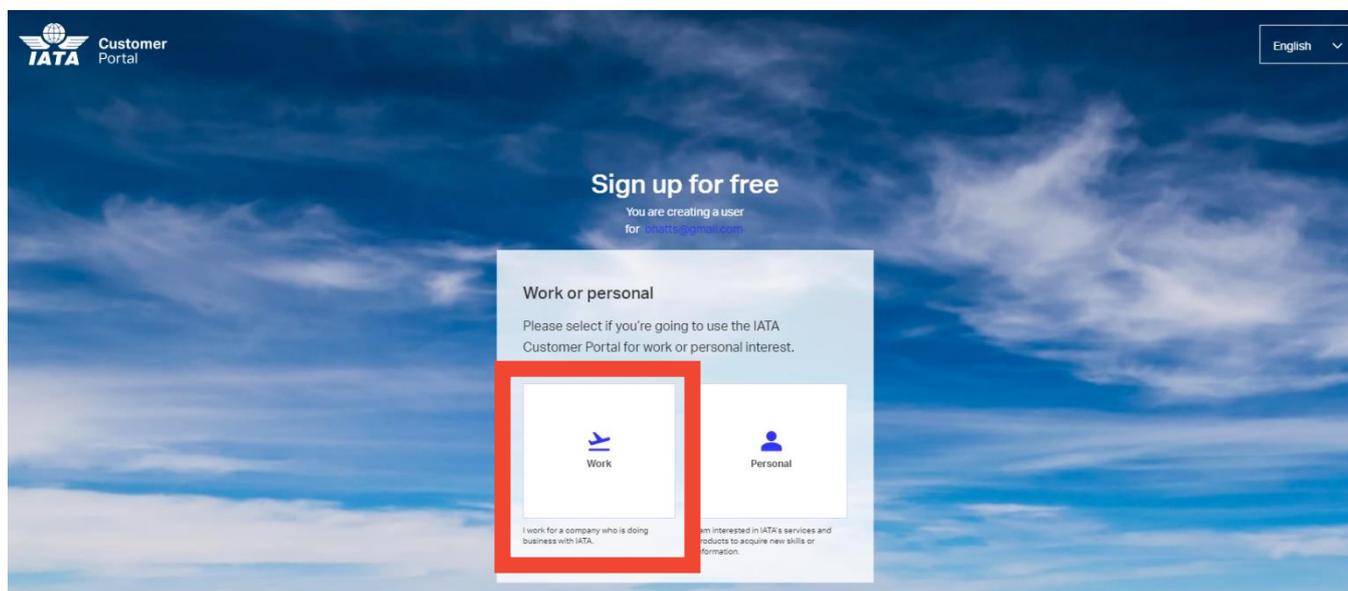

User Guide to Ground Ops Platforms

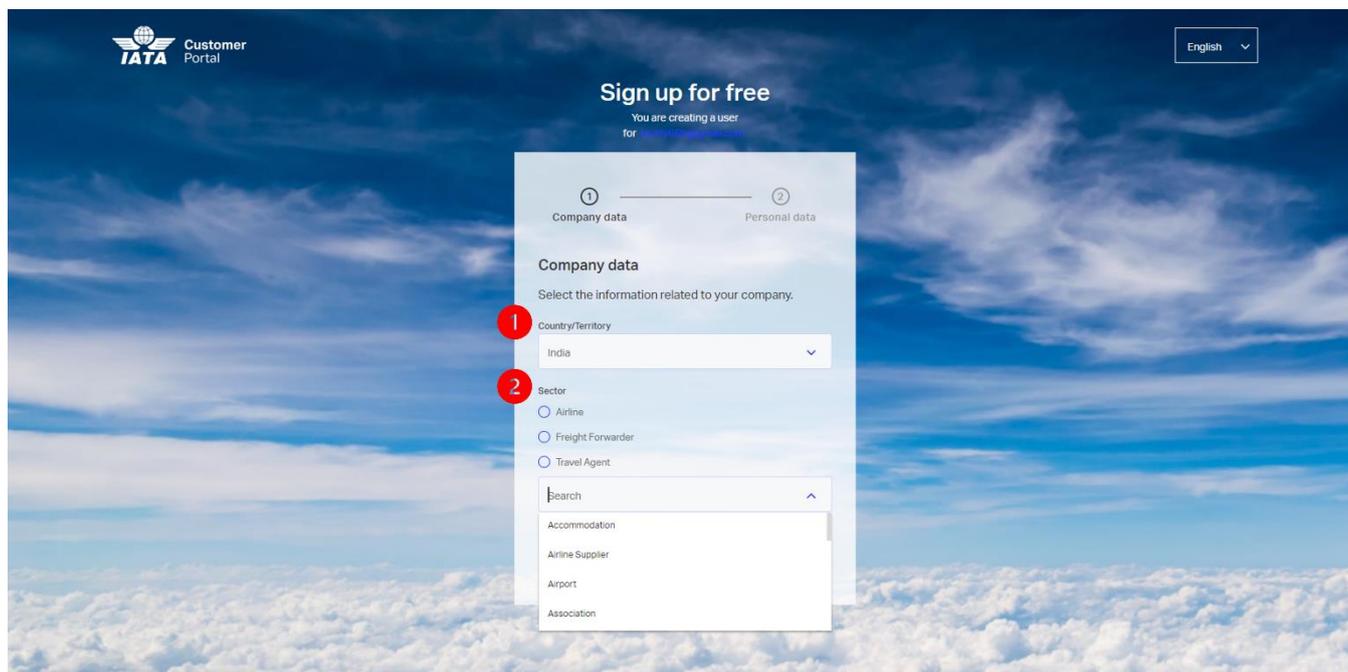

Version: 02

Revision: 00

Publication date: 31-Aug-2023

Fill out the form by first choosing your **Country/Territory** from the dropdown menu and then selecting the corresponding **Sector** that fits your organization.

If you are an airline, please select **Airlines**.

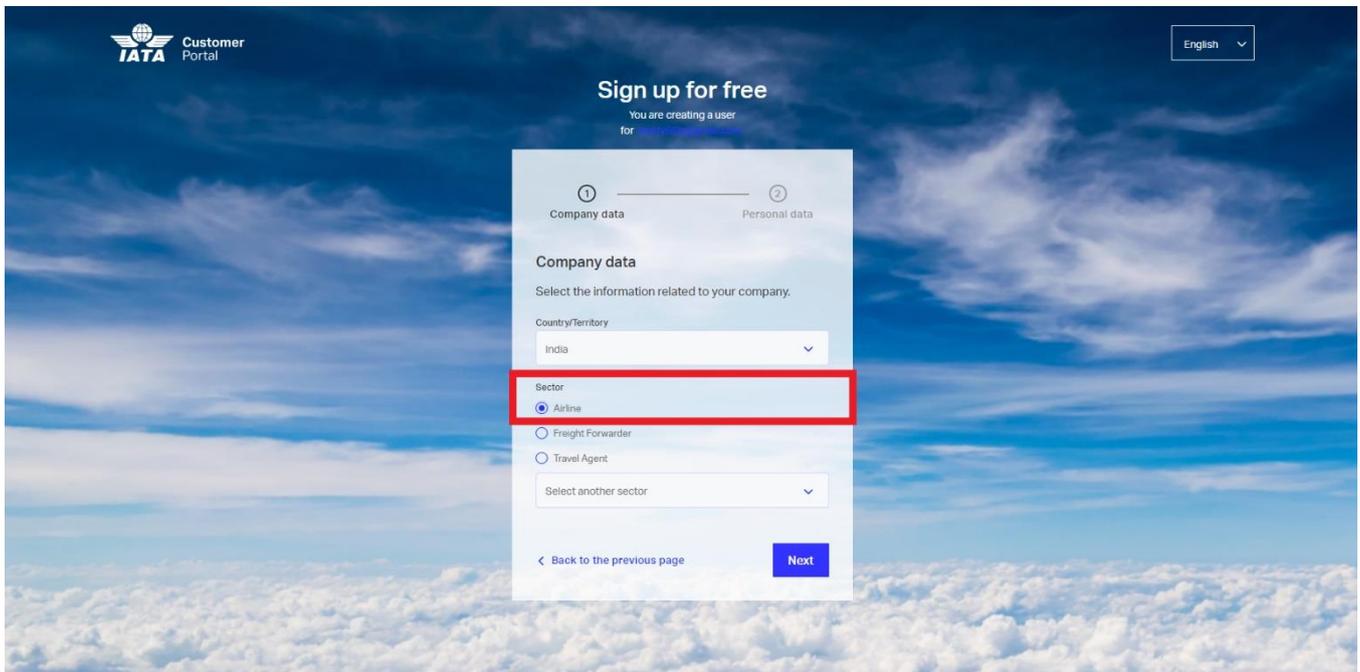

User Guide to Ground Ops Platforms

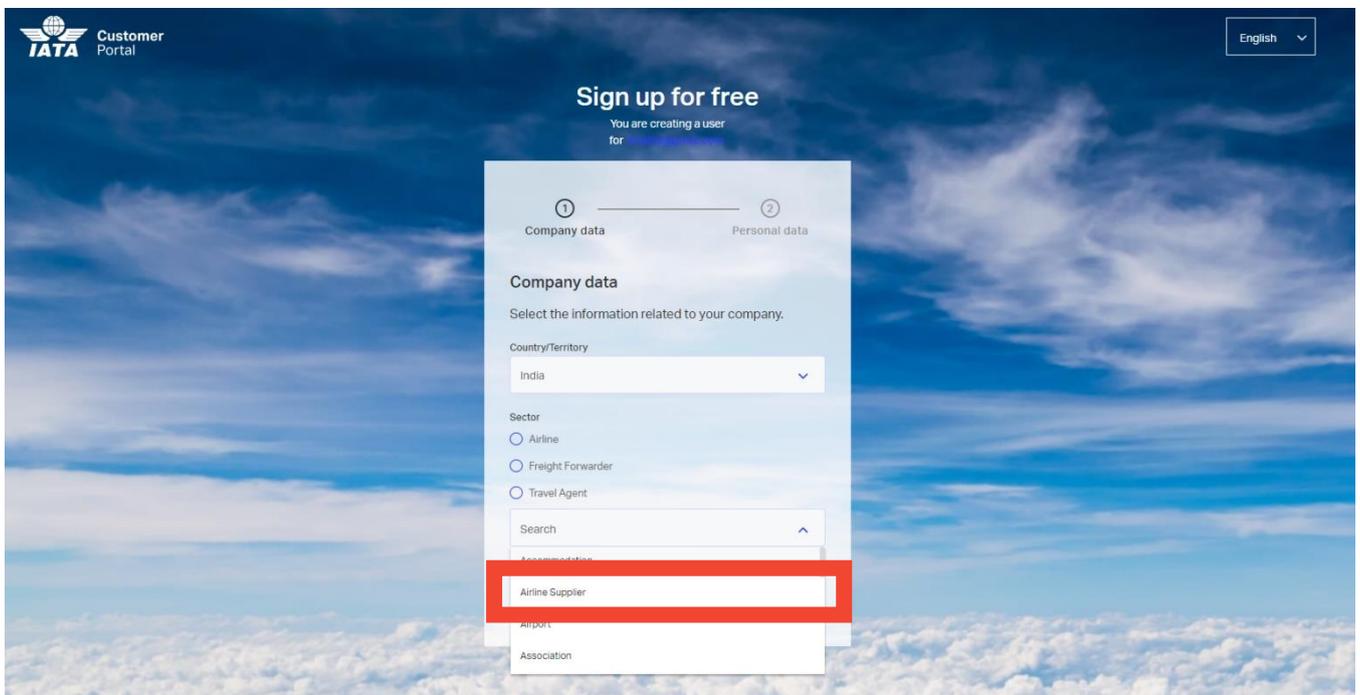

Version: 02

Revision: 00

Publication date: 31-Aug-2023

If you are a ground service provider, please click on **"Select another sector"** to open a dropdown list. Then, specifically choose **"Airline Supplier"** from the dropdown options.

Once the sector is correctly selected, click on **Next**.

Revision: 00

Publication date: 31-Aug-2023

The screenshot shows the 'Sign up for free' page on the IATA Customer Portal. The page is titled 'Sign up for free' and 'You are creating a user for [redacted]'. It features a progress indicator with two steps: 'Company data' (Step 1) and 'Personal data' (Step 2). The 'Company data' section is active and contains the following fields: 'Country/Territory' (dropdown menu with 'India' selected), 'Sector' (radio buttons for 'Airline', 'Freight Forwarder', and 'Travel Agent', with 'Airline' selected), and 'Select another sector' (dropdown menu). At the bottom of the form, there is a 'Back to the previous page' link and a 'Next' button, which is highlighted with a red box.

Provide your **First Name** and **Last Name** in the highlighted boxes. You can read **Privacy Policy** and **Terms of Use** by clicking on them. Once ready, click on **Next**.

The screenshot shows the 'Sign up for free' page on the IATA Customer Portal, now at Step 2: Personal data. The progress indicator shows 'Company data' as completed (with a green checkmark) and 'Personal data' as the current step. The 'Personal data' section is active and contains the following fields: 'First name (Given name)' and 'Last name (Family name)', both of which are highlighted with a red box. Below the name fields, there is a message: 'By clicking Next you confirm you have read and agree to the following terms: [Privacy Policy](#) [Terms of Use](#)'. At the bottom of the form, there is a 'Back to company data' link and a 'Next' button, which is highlighted with a red box.

You will be presented with the following screen which informs you of an email sent to you for next steps.

4 IATA Operational Portal

Once you have successfully completed your registration in the IATA Customer Portal, accessing the IATA OPS Portal is easy. But before that, here is some information for you to better understand IATA OPS Portal.

4.1 Guide to OPS Portal platform

4.1.1 Definitions

4.1.1.1 Account Types

Airline account

Each airline can have only one account per Air Operator Certificate (AOC).

Station (Location)

Refers to the location of each account.

Ground Handling Service Provider (GHSP) accounts

GHSPs can have multiple accounts depending on the number of locations in the GHSP's network, but only one account per location.

Airlines that also provide ground handling services to third parties as a GHSP will need to create separate accounts:

- As an airline (with one account per AOC)
- As a GHSP (with one account per location)

4.1.1.2 User Types

The platform is designed to assign different user profiles that have specific accessibility and permissions. The roles that a user can have in the OPS Portal platform are:

IGOM Admin

The company administrator of the account. The IGOM Admin can access all the sections currently enabled in the platform (Dashboard, GAP Analysis, Notifications, Variation Report, IGOM Document Description and Station Administration).

Editor

The Editor is primarily assigned to complete a section or sections of the gap analysis on behalf of the IGOM Admin. The Editor will have access to the Dashboard, GAP Analysis, Variation Report and IGOM Document

User Guide to Ground Ops Platforms

Version: 02

Revision: 00

Publication date: 31-Aug-2023

Description sections.

Viewer

The Viewer is primarily a company employee who has an interest in viewing variation(s) in the accounts of the members of the portal with which the company is sharing information. The Viewer can see the Variation Report and IGOM Document Description sections.

Station Acknowledger

The Acknowledger has access to the same sections as a Viewer, but with the addition of the Notifications section, where they will receive information about the published gap analysis. The Acknowledger is a role primarily designed for GHSP organizations. The role is meant to be the main point of contact of a GSHP Station who oversees handling documentation from customers and distributing it to the personnel.

Service Administrator

When inviting users to the IGOM portal, there is an option to include the Service Administrator role. This role grants the selected users the ability to manage all subsequent accesses, invitations, and workflows within the company. In another words, this allows the person to invite any other person in the company to join your company's IGOM Portal account.

It is up to the inviter/IGOM admin and service administrator to decide whether to use this option.

Sections	Functionalities \ Roles	IGOM Admin	Editor	Station Acknowledger	Viewer
Dashboard	Visualize own station /airline charts	Yes	Yes	Yes	Yes
GAP Analysis	Create / Clone GAP Analysis	Yes	No	No	No
GAP Analysis	Edit Chapters of GAP Analysis	Yes	Yes	No	No
GAP Analysis	Attach GOM Documents	Yes	No	No	No
GAP Analysis	Send notifications	Yes	No	No	No
GAP Analysis	Edit section "Notes" in Gap Analysis	Yes	Yes	No	No
GAP Analysis	Publish a GAP Analysis	Yes	No	No	No
Variation	See Variation description / attachment s	Yes	Yes	Yes	Yes
Variations	Read variations for own station	Yes	Yes	Yes	Yes
IGOM Document	Read the last IGOM	Yes	Yes	Yes	Yes
IGOM Document	List and read older IGOMs	Yes	Yes	No	No
Notifications	Send notifications	Yes	No	No	No
Notifications	Read & acknowledge notifications	Yes	No	Yes	No
Account Administration	Invite other User of the platform to share information	Yes	No	No	No
Account Administration	Assign roles in the account	Yes	No	No	No

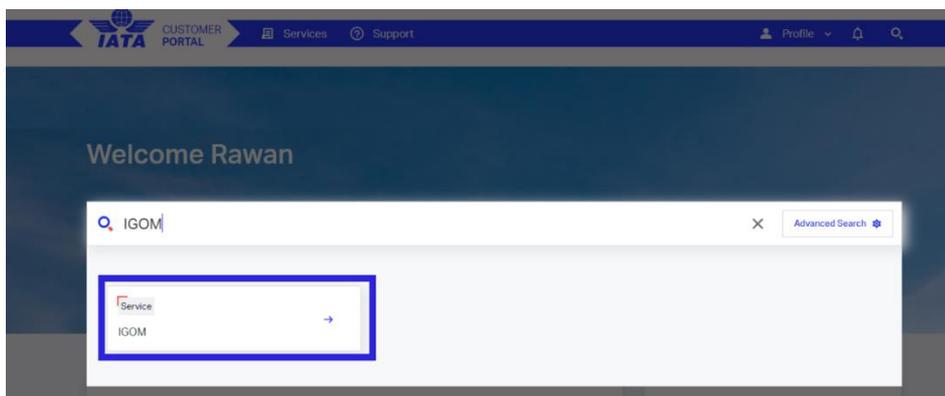

4.2 OPS Portal Registration

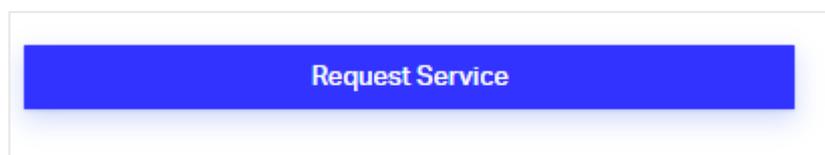

There are two ways of how to request access to the OPS Portal and both ways to access the portal is straightforward and can be completed by following the steps outlined below:

First Option

- If you already have access to the IATA Customer Portal, as instructed in [section 3](#) of this user guide, log in to the IATA Customer Portal and search for "IGOM" in the search bar and choose the "IGOM" service.

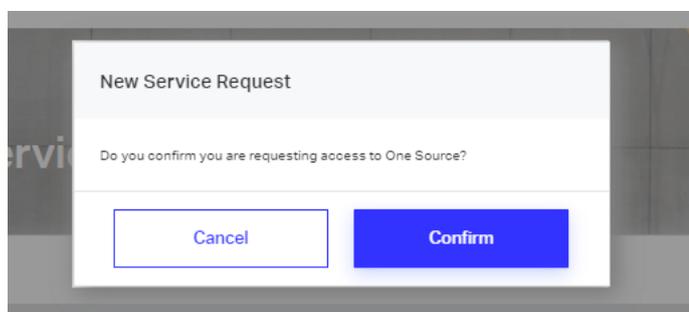

Next, click on the "Request Service" button.

Note: if you haven't yet filled your profile, the system will ask you to do it now. Follow the instructions in [section 3.5.2](#)

- Confirm you are requesting access:

Second Option

- Begin by navigating to the IATA website at [IATA - Home](#) and selecting the "Programs & Policy" tab from the top menu.
- From the drop-down menu, choose "Ground Operations" under the "Operations & Infrastructure" sub-menu.

User Guide to Ground Ops Platforms

Version: 02

Revision: 00

Publication date: 31-Aug-2023

- On the Ground Operations page, click on "Operational Portal" [IATA Operational Portal \(IGOM Portal\)](#) and scroll down to the "Sign up for the Ops Portal now" section.
- Fill in all the required information and ensure that you have checked the consent box before submitting your application by clicking the "Sign up" button.

Ops Portal features

- **Notification function:** communicate information about your variations to the IGOM once and update all partners in real time.
- **Gap analysis:** benchmark your procedures and monitor where they differ from IGOM. If you have no variations, effortlessly adopt the IGOM in full.
- **Variation report:** facilitate the identification of variations from IGOM and share them with your business partner.
- **Dashboard:** get insight on your performance, with customizable reports and charts.
- **Station administration:** keep your data confidential, telling only those who need to know.
- **Always up to date:** receive the latest changes to the IGOM as they're approved.
- **Easy to manage:** assign different roles within your organization.
- **It's free: sign up today.**

- Click on the "Click here to continue" link as indicated in the image below:

- Finalize your personal profile information in the IATA Customer Portal as instructed in [section 3.5.2](#)
- Check your email and click on "Take me to the Portal."

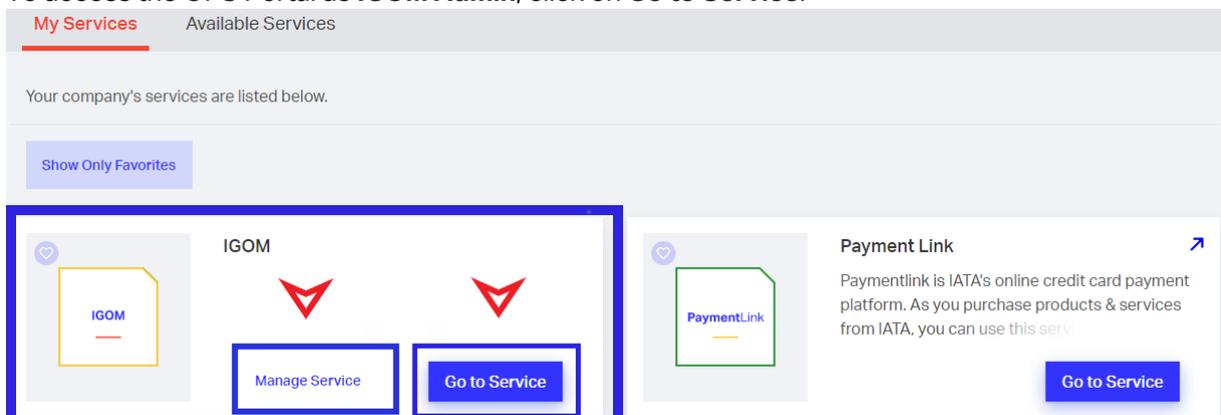

Once you have completed the information in your personal profile, the registration is active.

Welcome to IATA Customer Portal >> Posta in arrivo x

4.2.1 Access Granted

- The person of the company who is first given access to the OPS Portal will have two roles: **IGOM Admin** and **Service Administrator**.
- To access the functionalities of the **Service Administrator**, click on the **Manage Service** button.
- To access the OPS Portal as **IGOM Admin**, click on **Go to Service**.

4.3 OPS Portal Main Features

The OPS Portal platform is divided into the following sections:

- Manage Service (invitation Step 1)
- Station administration (invitation Step 2)
- Dashboards
- GAP analysis
- Notifications
- Variation report
- IGOM document description

First two items are related to inviting other users to the OPS Portal. Except for Manage Service, all other sections are accessible from the sidebar menu of the page:

The screenshot shows the IATA Customer Portal interface. At the top, there is a navigation bar with the IATA logo, 'Customer Portal' text, and dropdown menus for 'Services' and 'Support'. On the right, there is a search bar, a notification bell, and a user profile icon for 'Rawan Hafez'. Below this is a secondary navigation bar with 'ONE SOURCE' and 'Dashboard' tabs, along with 'Air test' and a notification badge. The main content area is titled 'General Overview' and features a search bar, a table with one row of data, and a pie chart showing the status of all stations.

4.4 Service Administrator “Manage Service” (Invitation Step 1)

By clicking on “Manage Service” you will access a page where you will be able to invite people in your company to join your company’s account.

To invite a person to join the account:

- Enter a valid email address.
- Choose if the person will be a **Service Administrator** or **Blank**
- Click on **Invite**

There are two different options you can choose when inviting people: **Service Administrator** or **Blank**.

If you invite a person by selecting the **Service Administrator** option, the person will be able to invite other people from your company to the account.

If you invite a person by selecting the **Blank** option, the person will not be able to invite any other person to the account, meaning the person will not be enabled as an additional **Service Administrator**.

Here is how to assign these roles:

Home > Services > Manage Services

IGOM

4.5 Station Administration

4.5.1 General

Access to the Station Administration page is only available to people who have been assigned the IGOM Admin role.

The Station Administration page has two tabs to manage the following:

User Guide to Ground Ops Platforms

Version: 02

Revision: 00

Publication date: 31-Aug-2023

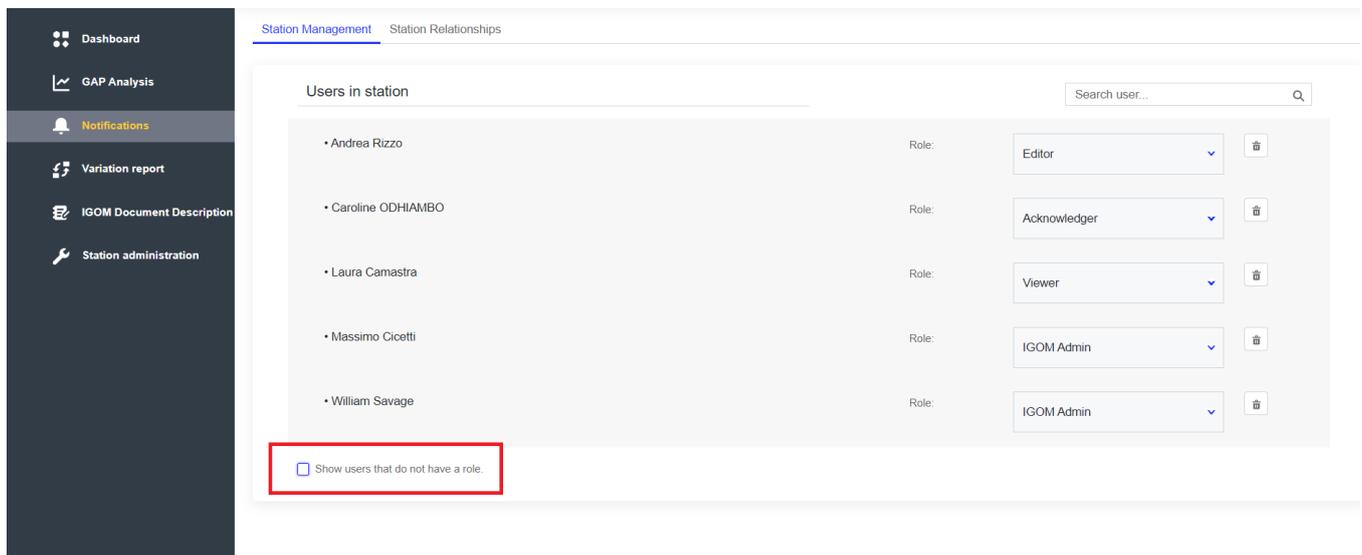

Station Management: assign roles to people you have invited to join your OPS Portal account.

Station Relationships: Create relationships between accounts.

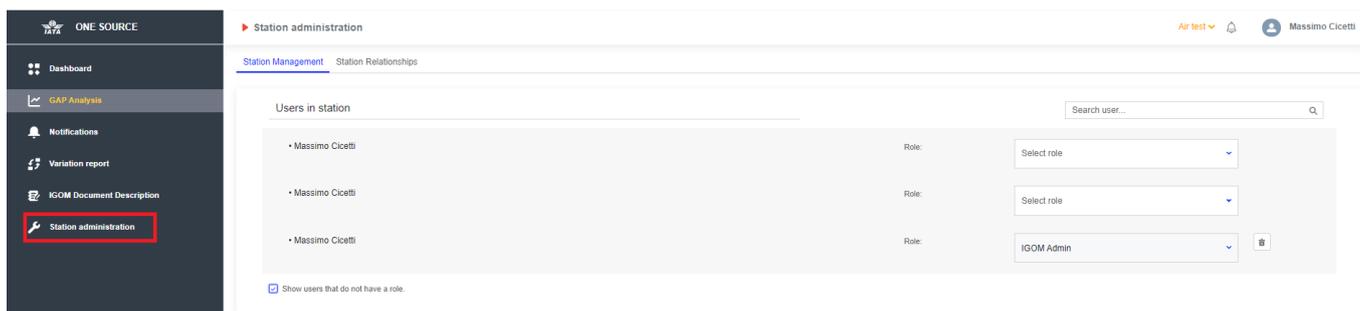

4.5.2 Station Management (Invitation Step 2)

In this tab, the IGOM Admin can assign a role to each person in the account.

Below the list of users, there is a checkbox labeled "Show users that do not have a role." Enabling this checkbox will display users who have not been assigned a role, making it easier to identify and manage their roles.

Example:

Clicking on arrow next to the name of the user will allow to assign a role to the users.

• Laura Camastra	Role:	Viewer	
• Massimo Cicetti	Role:	IGOM Admin	

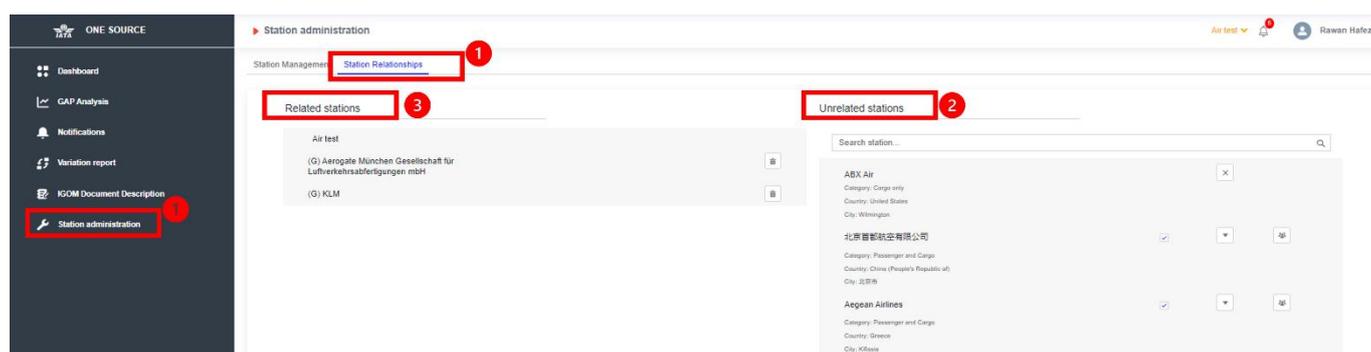

All these options will allow the IGOM Admin to easily manage the roles of users at their station.

4.5.3 Station Relationships

The Station Relationships tab is a workspace where the IGOM Admin can manage relationships between different OPS Portal accounts.

To establish a hierarchy group or a group relationship with other companies existing on the OPS Portal, users can follow these steps using the Station administration page and the station Relationships tab:

1. Access the **Station Relationships** tab. This tab is located on the **Station administration** page.
2. On the right side of the screen, under **Unrelated stations**, a list of companies with OPS Portal accounts will be displayed.
3. On the left side of the screen, under **Related stations**, companies that the user already has a relationship with will be listed.

4.5.3.1 Create a Hierarchy Group (internal – within same organization)

What is a hierarchy group?

A hierarchy group creates a “parent/child” relationship. A “parent” can share documentation loaded in the “Document” section to all members of the hierarchy and give any member of the group the opportunity to “clone & reuse” an existing gap analysis published by the parent.

Typically, a generic version of the gap analysis is created at the headquarters or “parent” level by the IGOM Admin. It can then be cloned, reused, and adjusted for the specific “child” account.

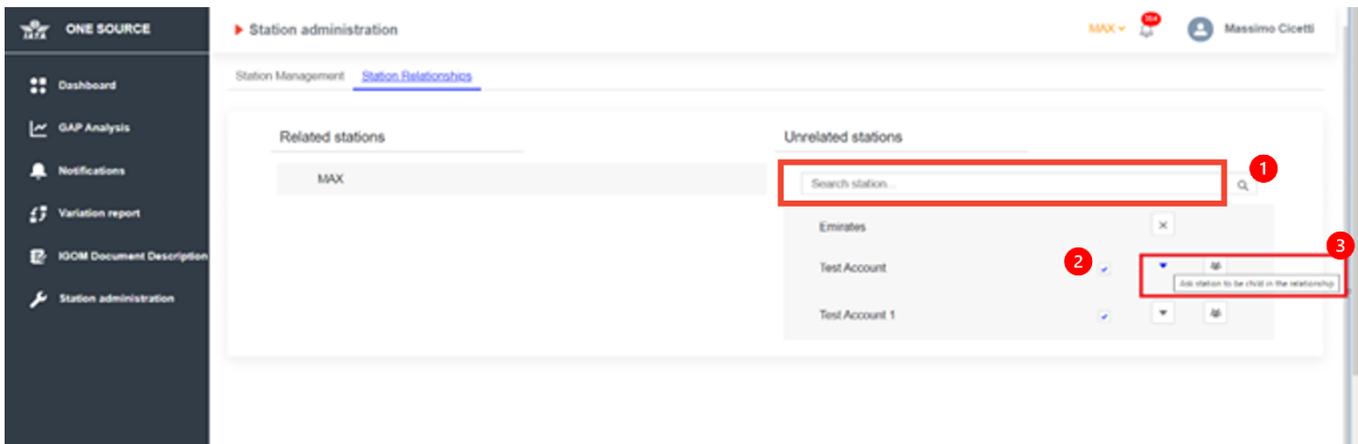

This option can be used by GHSPs operating at multiple stations to link all the stations under one umbrella. In this case, the headquarters station (parent) will send a request to the outstations to become a “child” in the hierarchy.

This option can also be chosen by airlines to either link different AOCs of the same group under one umbrella or to link the airline to its own ground handler (e.g., airlines also having a ground handling department).

How to create a hierarchy group:

To create a hierarchy group relationship with another account, the IGOM admin should perform the following:

1. Utilize the search functionality provided to locate the desired account with which to establish a hierarchy group.
2. Once the account is found, there is an option to control notifications within the relationship. The requesting account must choose whether to activate the notifications for communications by ticking the mark.
3. Once the notification aspect is determined, the IGOM admin should proceed by clicking on the **downward arrow** symbol as shown below.

4. By clicking the downward arrow, an invitation request will be sent to the other account.
5. The IGOM admin of the other account will then have the option to either accept or decline the hierarchy group relationship request.
6. If the request is accepted by the IGOM admin of the other account, that company's name will be moved to the left side under **Related stations**.

4.5.3.2 Create a Group Relationship with Another Account (external – with other organization(s))

What is a group relationship?

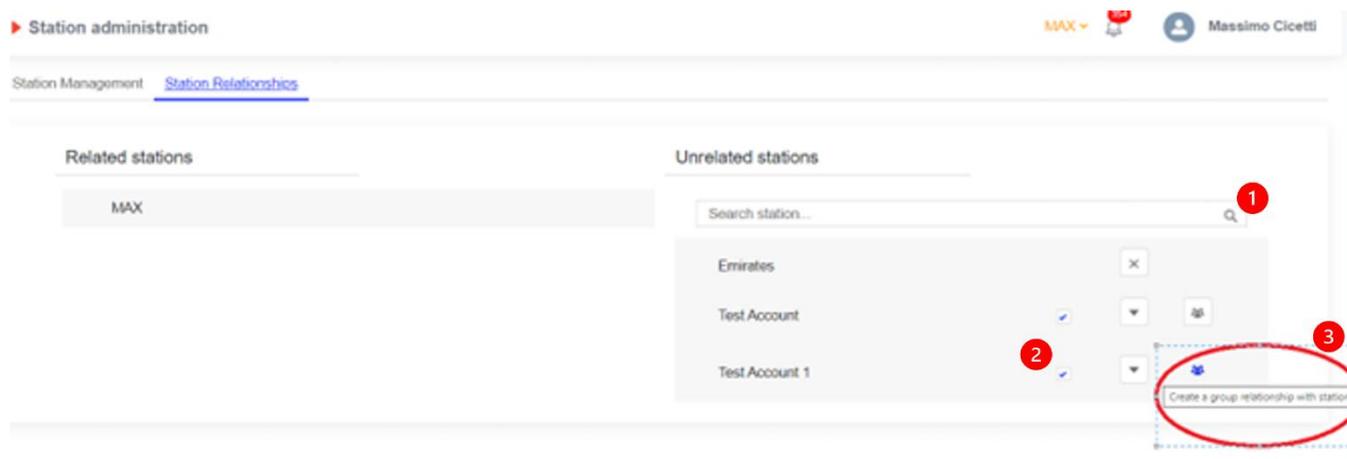

This option is used to create a relationship between an airline and a GHSP to make it possible to share information between the accounts in the relationship. Group relationships allow accounts to share their gap analysis variation reports for review.

How to create a group relationship:

To create a group relationship with another account, the IGOM admin should perform the following:

1. Utilize the search functionality provided to locate the desired account with which to establish a hierarchy group.

- Once the account is found, there is an option to control notifications within the relationship. The requesting account must choose whether to activate the notifications for communications by ticking the mark.
- Once the notification aspect is determined, the IGOM admin should proceed by clicking on the **group** symbol as shown below.

- By clicking the group symbol, an invitation request will be sent to the other account.
- The IGOM admin of the other account will then have the option to either accept or decline the group relationship request.
- If the request is accepted by the IGOM admin of the other account, that company's name will be moved to the left side under **Related stations**.

4.6 Dashboard

The dashboard on the main page of the OPS Portal provides a comprehensive overview of your company's information. It includes:

- Company name
- Type of company
- Country and city
- Latest published gap analysis date, indicated as **Last Revision**
- Number of variations reported in the latest published gap analysis.
- Notification acknowledgment, if any notifications were sent during the publication of the latest gap analysis (for further details, refer to [section 4.8](#) on Notifications)
- **Go to Report** button.

4.7 Gap Analysis

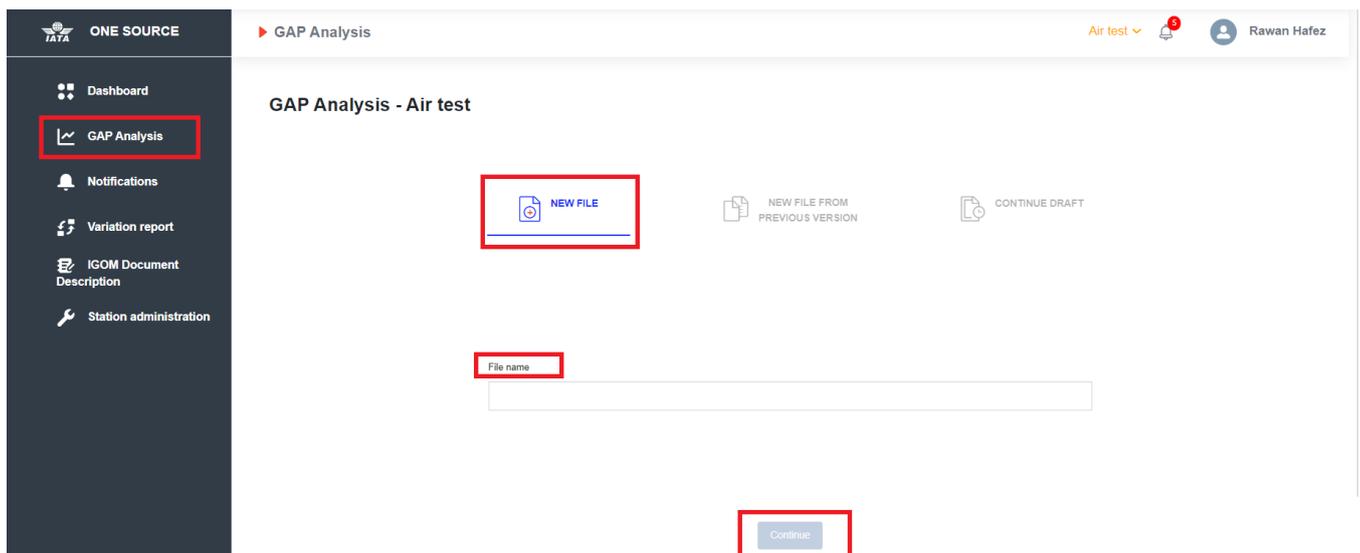

4.7.1 Introduction

The GAP Analysis section is the core of the OPS Portal. It allows the company to benchmark its own procedures against those of IGOM, indicating areas of conformance, variations and what is out-of-scope in the company's documentation in comparison to IGOM. To better understand IGOM implementation, it is recommended to view the [IGOM Implementation video](#).

It is important to note that a gap analysis shows conformity (or not) at a documentational level only. It does not indicate conformity for implementation.

4.7.2 New File

The **New File** wizard enables the IGOM Admin to initiate the creation of the initial company gap analysis. The process for creating a new gap analysis begins with naming the file, ensuring that the name accurately represents the company, version number, and, if applicable, the gap edition. Upon clicking **Continue**, a new page will be presented, presenting all IGOM procedures that need to be reviewed and completed.

4.7.3 New File from a Previous Version (Published Gap Analysis Clone and Reuse)

When a new edition of the IGOM is released, the Administrator has the option to clone and reuse an existing gap analysis. This can be done by following these steps:

Cloning an Existing Published Gap Analysis:

- Select **New File for a Previous Version**: The Administrator chooses this option to initiate the cloning process.
- List of Previously Published Gap Analyses: A list of previously published gap analyses will be displayed, including any gap analysis created at the headquarters or "parent" level, if a hierarchy group has been established between accounts.
- Select the Desired Published Gap: From the list, the IGOM admin selects the desired gap analysis, renames it, and saves it.

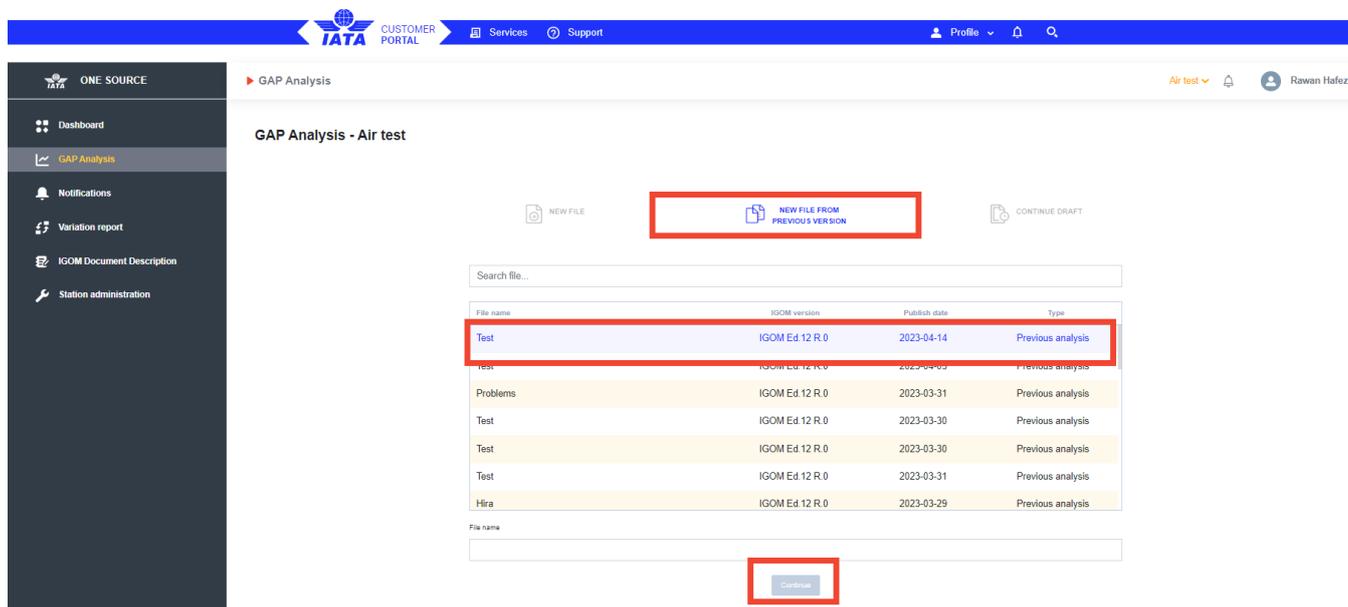

User Guide to Ground Ops Platforms

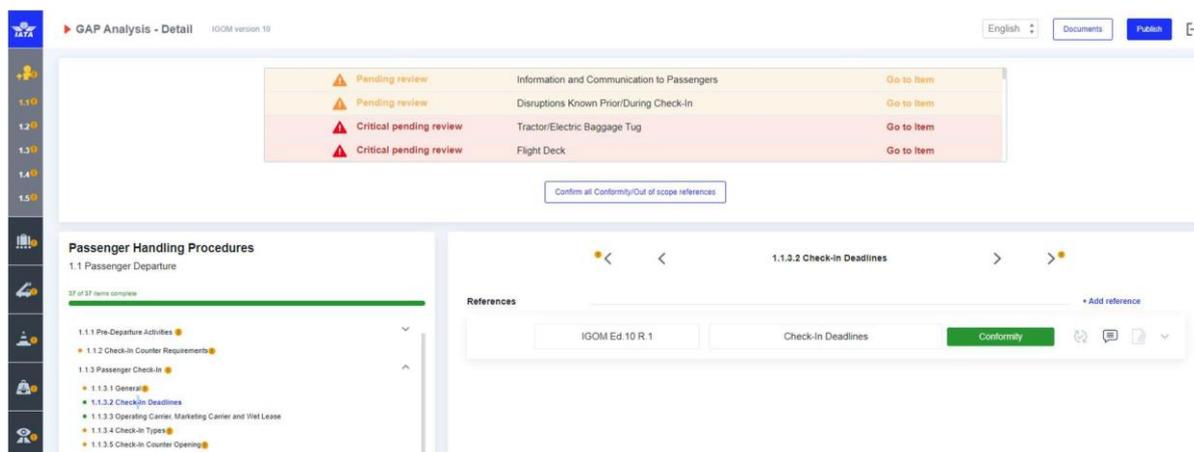

Version: 02

Revision: 00

Publication date: 31-Aug-2023

When accessing an already published gap analysis, it will display with all the references already filled in. Any IGOM items that have been updated with the latest IGOM version will be highlighted for easier comparison by the IGOM admin/Editor.

Any IGOM procedures that have been amended between IGOM editions will automatically have their reference mappings changed to "variation." A list of these procedures will be generated for review on top of the gap or screen, and each item on the list must be reviewed before proceeding with the publication of the gap analysis. To expedite the review process, you can utilize the **Go to Item** feature, which allows quick navigation to each item then review the mapping response and update it if needed, as outlined in [section 4.7.8](#) of the **References**.

User Guide to Ground Ops Platforms

Version: 02

Revision: 00

Publication date: 31-Aug-2023

	Pending review	Cabin Baggage	Go to Item
	Pending review	Checked Baggage	Go to Item
	Pending review	Dangerous Goods in Baggage	Go to Item
	Pending review	Bulky and Oversized Baggage	Go to Item

On the other hand, IGOM procedures that have remained without any amendments between IGOM editions will retain their mapping status as in "conformity" or "out of scope" but will require revision. There are two different ways to proceed with the review of "conformity" or "out of scope" mapping references:

1. To simplify the revision process, you can simply click on **Kindly click here to confirm the review of all conformity/out of scope references that have remained unchanged across IGOM editions**. This will automatically confirm the revision of all those items with a single click.

[Kindly click here to confirm the review of all conformity/out of scope references that have remained unchanged across IGOM editions](#)

2. Review each item individually and confirm the revision by either opening each reference and clicking "save" or by clicking the circle button.

4.7.4 Continuing a Draft Version of the Gap Analysis

Once a gap analysis is started, all information is automatically saved in the OPS Portal. When accessing the wizard, the automatically saved draft gap analysis will be available so the Editor or IGOM Admin can continue to fill in the remaining information and/or modify data already in the gap analysis.

The **Discard draft** button serves the purpose of deleting any unwanted drafts from the system. This functionality allows for the removal of drafts that are no longer needed or relevant. We would encourage you to delete any obsolete drafts to avoid working on the incorrect draft.

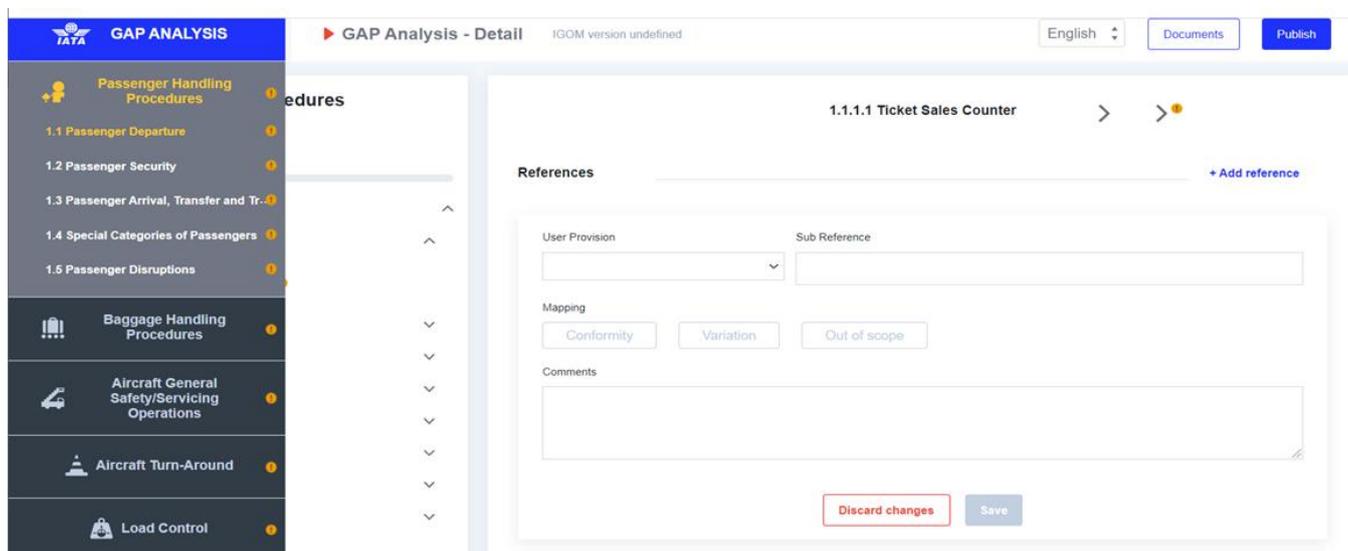

4.7.5 Gap Analysis Details

The gap analysis wizard is divided into multiple sections. There is a sidebar menu on the left where the IGOM chapters and subchapters are displayed. This menu can be collapsed or expanded by clicking the IATA logo at the top of the sidebar.

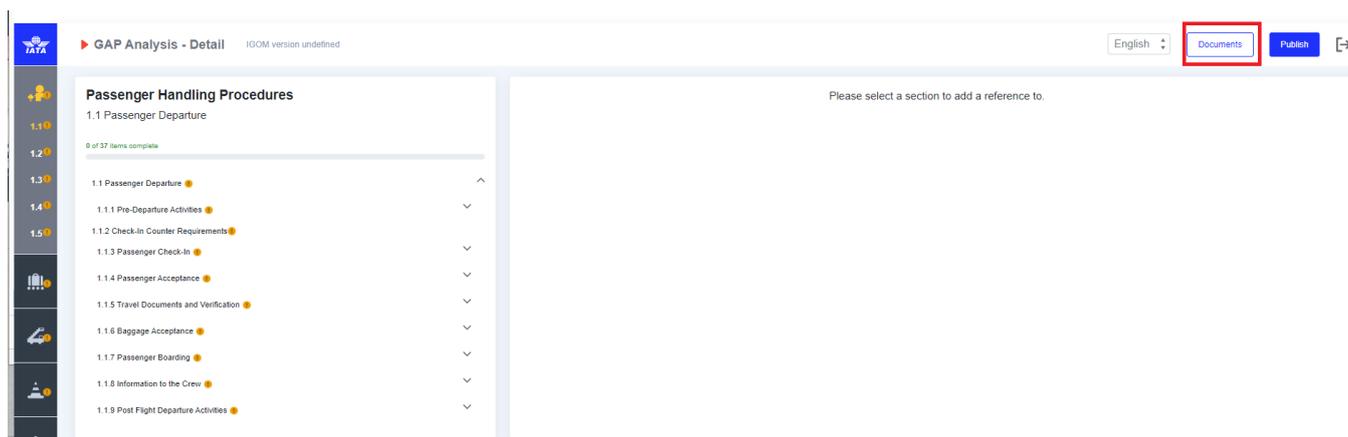

Collapsed View:

Expanded View:

To be able to start filling in the gap analysis, the "Document" section first needs to be populated.

4.7.6 Documents

To populate the **Document** section, there are two options: **Adopt IGOM** or **Add document**.

4.7.6.1 Adopt IGOM

The **Adopt IGOM** button is available only when the gap analysis is empty. If a company chooses to adopt IGOM in its entirety, then, by clicking the **Adopt IGOM** button, all the information in the gap analysis will automatically turn to "green." This indicates conformity with the reference and sub-reference as it is published in IGOM.

Nevertheless, if a user still has a variation(s), it is possible to add other document references by using the **Add document** function.

For those organizations that have set up a hierarchy group, all documents uploaded in the OPS Portal in an individual account will be visible to all members of the group. For more information, please see [Section 4.5 Station Administration](#).

4.7.7 Gap Analysis Display

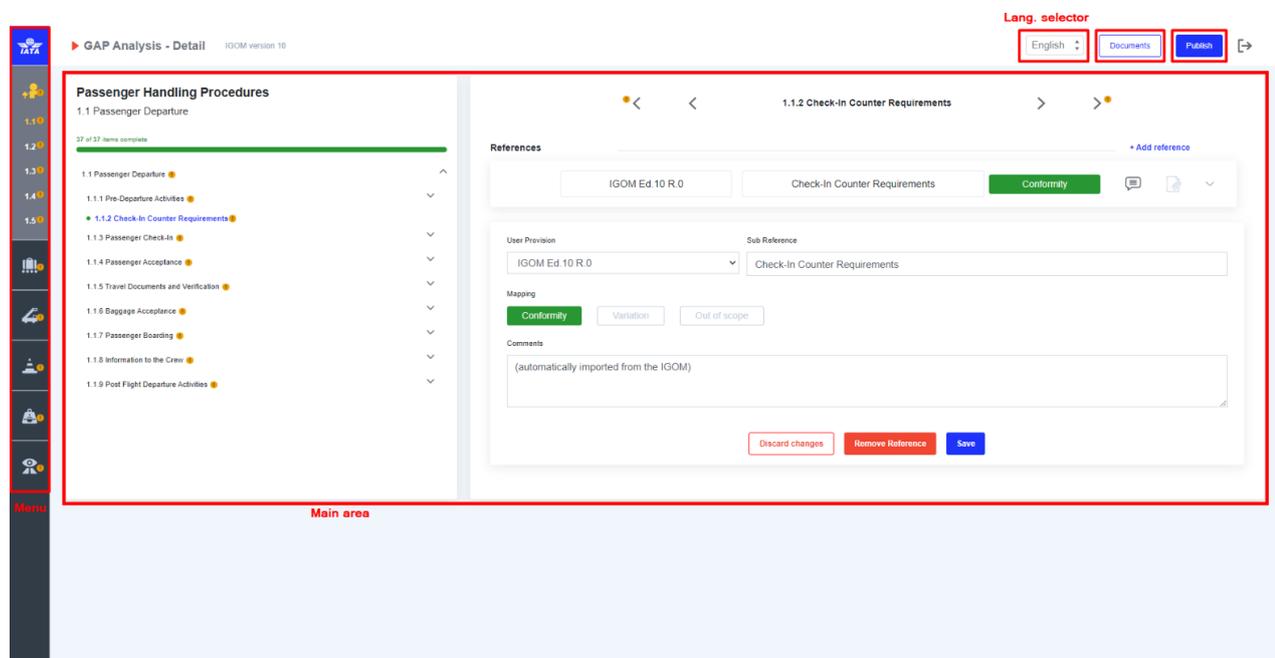

Chapter 1 of IGOM "Passenger Handling Procedures" is displayed by default. All subchapters are displayed in the main area. These subchapter(s) contain a navigation menu for the items of the selected subchapter. A progress bar indicates how many items per section have been assessed as "Conformity," "Variation" or "Out of scope."

Fillable fields are only provided for the subchapters of IGOM that contain a procedure. For example, in the screenshot shown below, the "collapsed view" shows that sub-chapter 1.1.1.1 is fillable while its parent sections 1.1.1 and 1.1 are not.

The screenshot shows the 'GAP Analysis - Detail' interface for 'IGOM version 10'. The main content area is titled 'Passenger Handling Procedures' and displays a tree view of subchapters. The subchapter '1.1.1.1 Ticket Sales Counter' is highlighted with a red box. To the right, the 'References' section is empty, with a message: 'To be able to assign any reference, you need to add a document first.'

When more than one language of IGOM is uploaded by IATA, a language selector will appear in the top right corner of the screen.

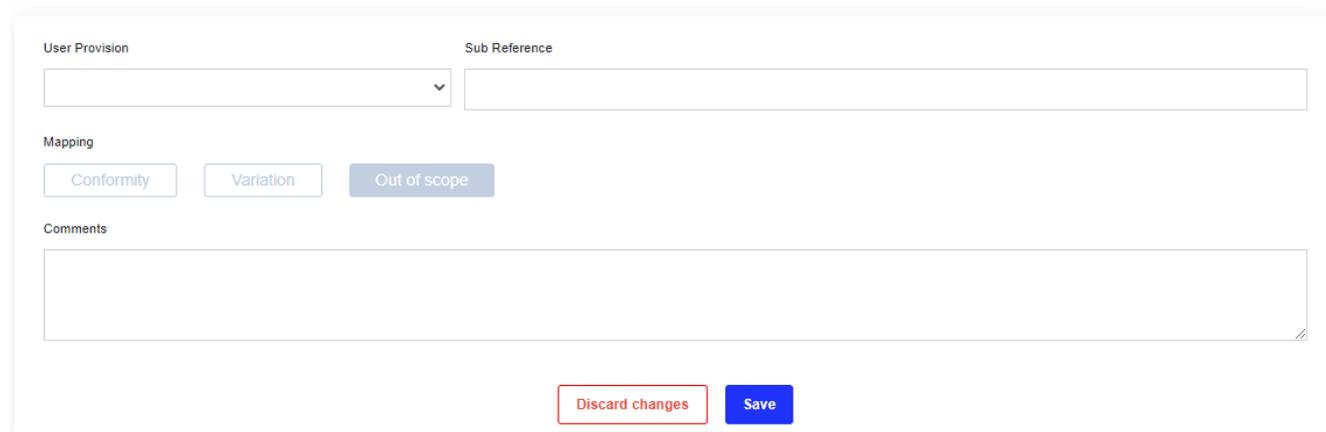

All the documents necessary for referencing in the gap analysis first need to be uploaded in the documents section. See [Section 4.7.6.2 Add Document](#).

Lastly, once the gap analysis is completed and ready to be published, click on the "Publish" button in the top right corner of the screen. For more information on the Publish function, see [section 4.7.12 Publish GAP Analysis](#).

4.7.8 References

This is where you compare your reference documentation to IGOM.

Under **User Provision**, there is a drop-down menu that displays a list of all the documents previously loaded into the Document section.

Sub Reference is the part (typically a numbered section) of the manual or document to be referenced.

References

[+ Add reference](#)

User Provision: Sub Reference:

Mapping:

Comments:

If an IGOM procedure is covered in different parts of the company's documentation (e.g., in two different sections of the same manual or even in different manual(s)), the function **Add reference** can be used. This allows the company to add as many references to their documentation as are needed to fully address the IGOM procedure.

Mapping:

Comments:

Second reference inserted:

References

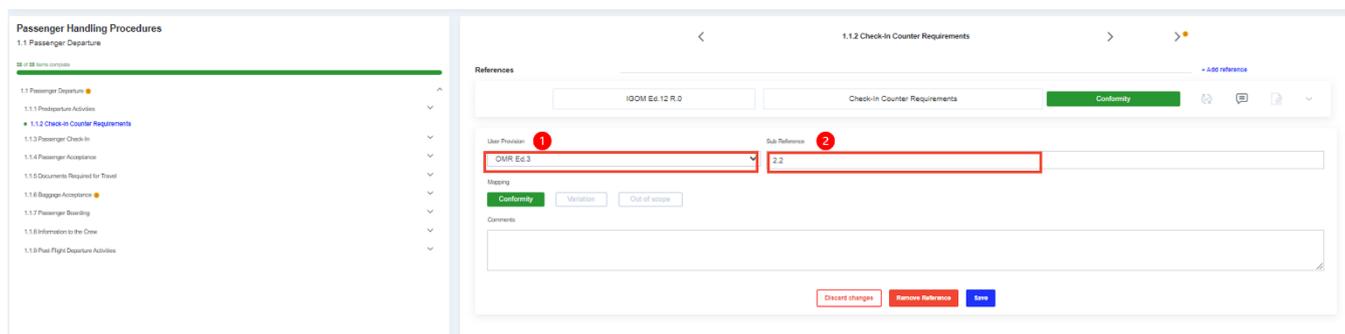

+ Add reference

AHM Ed.1	3.2	Conformity		
UM Ed.2	1.1.3	Conformity		

4.7.9 Assess Conformity

If the reference is marked as "Conformity" and to be able to successfully save the progress., the user needs to:

1. Choose their own company's GOM within the **User Provision** section.
2. Ensure that the **Sub Reference** field reflects the corresponding numbering from their GOM."

4.7.10 Out of Scope

If the reference is marked as "Out of scope ", it is possible to save without the need for a reference to company documentation.

4.7.11 Variations

4.7.11.1 General

In IGOM, a variation refers to situations where an operator or provider does not comply with the procedures outlined in the manual. If you come across any discrepancies between the user manual and IGOM, where a procedure in the user manual does not align with the corresponding procedure in IGOM due to differing steps or requirements, you should mark it as "Variation". If the reference is marked as "Variation ", the "User Provision," "Sub Reference" and "Variation Description" fields are mandatory. The text inserted in the "Variation Description" will be displayed in the variation report. There is also the opportunity to "Attach" supporting documents that can be subsequently downloaded.

Note:

- The "Variation Description" field is a required field and will be visible to all end users. The Editor shall clearly describe where and how the company procedure differs from the existing IGOM procedures. This

description will be transferred to the Variation Report, which can be shared with another account within the Group Relationship - [see 4.5.3.2 Create a Group Relationship with Another Account](#) for more details.

- A "Comment" is for notes for internal use only (the account's IGOM Admin and Editor).

The screenshot shows the 'References' section of the IGOM interface. On the left is a navigation tree with items like '1.1 Passenger Departure', '1.1.1 Pre-Departure Activities', etc. The main area shows a variation report for 'EOEM Ed.4 R.2' with sub-reference '3.3'. The 'Mapping' section has buttons for 'Conformity', 'Variation', and 'Out of scope'. The 'Comments' field is highlighted with a red box and contains the text 'we should revisit this procedure'. The 'Variation Description' field is also highlighted with a red box and contains 'This is [my variation]'. Below this is an 'Attachments' section with a 'Browse files' button highlighted by a red box. At the bottom are 'Discard changes' and 'Save' buttons.

4.7.11.2 Variations from IGOM Non-safety Critical Procedures

Variations from IGOM's non-safety critical procedures will be automatically highlighted in amber.

The screenshot shows the 'References' section for '4.1.2.1 Aircraft Arrival at a Gate or Open Ramp'. The left navigation tree shows '4.1.2.1 Aircraft Arrival at a Gate or Open Ramp' highlighted in amber. The 'References' section shows a list of references with 'Aircraft Arrival at a Gate or Open Ramp' highlighted in amber and a 'Variation' button also highlighted in amber.

4.7.11.3 Variations from IGOM Safety Critical Procedures

Variations from IGOM's safety critical procedures will be automatically highlighted in red.

The screenshot shows the 'References' section for '4.4.2.3 Opening of Cabin Access Doors from Inside by Authorized and Trained Ground Staff'. The left navigation tree shows '4.4.2.3 Opening of Cabin Access Doors from Inside by Authorized and Trained Ground Staff' highlighted in red. The 'References' section shows a list of references with 'AHM Ed.1' and '3.3' highlighted in red and a 'Variation' button also highlighted in red.

4.7.11.4 Multiple Language Option

The system is designed so companies can insert variations descriptions in multiple languages. This option facilitates the display of variations in more than one language.

References

Reference	Version	Status	Actions
AHM Ed.1	3.2	Conformity	Comment Download
UM Ed.2	1.1.3	Conformity	Comment Download
QOM Ed.1 V.1	3.3	Variation	Comment Download

In cases where there are multiple document references to an IGOM procedure, the mapping responses for these references will follow the following structure and color code automatically:

- All the reference mappings are in conformity with the entire IGOM procedure, are considered compliant and are marked in green.
- all the reference mappings are out of scope, the entire IGOM procedure is considered out of scope and is marked in grey.
- All the reference mappings are variations, the entire IGOM procedure is considered variation and is marked in amber or red. The variation description gets transferred to the variation report.

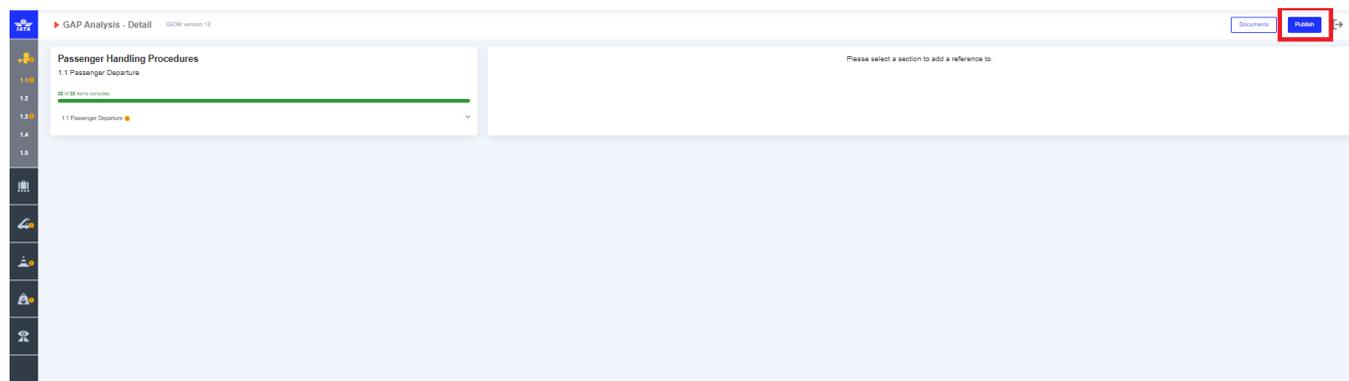

- reference mappings contain both conformity and variation, the entire IGOM procedure is considered as a variation and is marked in amber or red, The Variation Description gets transferred to the variation report.
- reference mappings include both conformity and out of scope, the entire IGOM procedure is considered as out of scope and marked in grey.
- reference mappings include both variation and out of scope, the entire IGOM procedure is considered as variation and is marked in amber or red, The Variation Description is transferred to the variation report.
- reference mappings include conformity, variation, and out of scope, the entire IGOM procedure is considered as variation and is marked in amber or red. The Variation Description is transferred to the variation report.

4.7.12 Publish GAP Analysis

Once the gap analysis has been fully completed or partially completed (with at least one chapter completed to 100%), it is possible to “Publish” either the entire gap analysis or selected chapters by choosing either “Select All” or just the chapters to be published. Publishing enables the sharing of the information in the gap analysis with all other accounts with which it has a relationship.

Click on the **Publish** button to publish the selected gap analysis.

At the same time as publishing the gap analysis, it is possible to establish an “Effective Date” to be associated with the gap analysis. Should this effective date be more than seven days after the publishing date, a reminder date can also be set.

Notifications (see [Section 4.8](#) Notifications) regarding the publishing of the gap analysis can also be sent. These notifications can be selected as either **Action Required** or **Informative**.

Action Required notifications trigger the sending of an email listing all the items together with their variation status and a link to acknowledge all of them.

Informative notifications trigger just the sending of an email listing all the items together with their variation status.

4.8.1.1 Notifications about Variations

When an item in the gap analysis is published or changed, the system will give the option to send a notification to all the accounts of the network (e.g., IGOM Admin and Acknowledgers, where applicable).

If the recipient of a notification is an IGOM Admin or Acknowledger, that recipient will be able to acknowledge notifications that are pending review. In both cases, clicking on one of the notifications will expand the message to show the complete content.

- New IGOM published [Hide detail](#) 3 months ago
- The "IGOM" manual has been published and is available for the creation of a new GAP Analysis. Its date of publishing will be 2021-05-24 00:00:00.
- Test subject multiple users [View detail](#) 5 months ago

4.8.2 Sending a Reminder Notification

If a notification has not been actioned by the Acknowledger, an automatic **Reminder notification** can be sent. These reminder notifications will be sent via email and will contain an **Acknowledge** button that will redirect the recipient to the IGOM Portal. A reminder can be set only if the effective date is seven or more days after the gap analysis is published.

Automatic notifications can be set up so the system will send reminders to different users that need to **Acknowledge** any specific change or update.

→ Forward

THIS LINK will direct the user to the OPS Portal to review the notification and its contents.

4.8.3 Manual Notifications

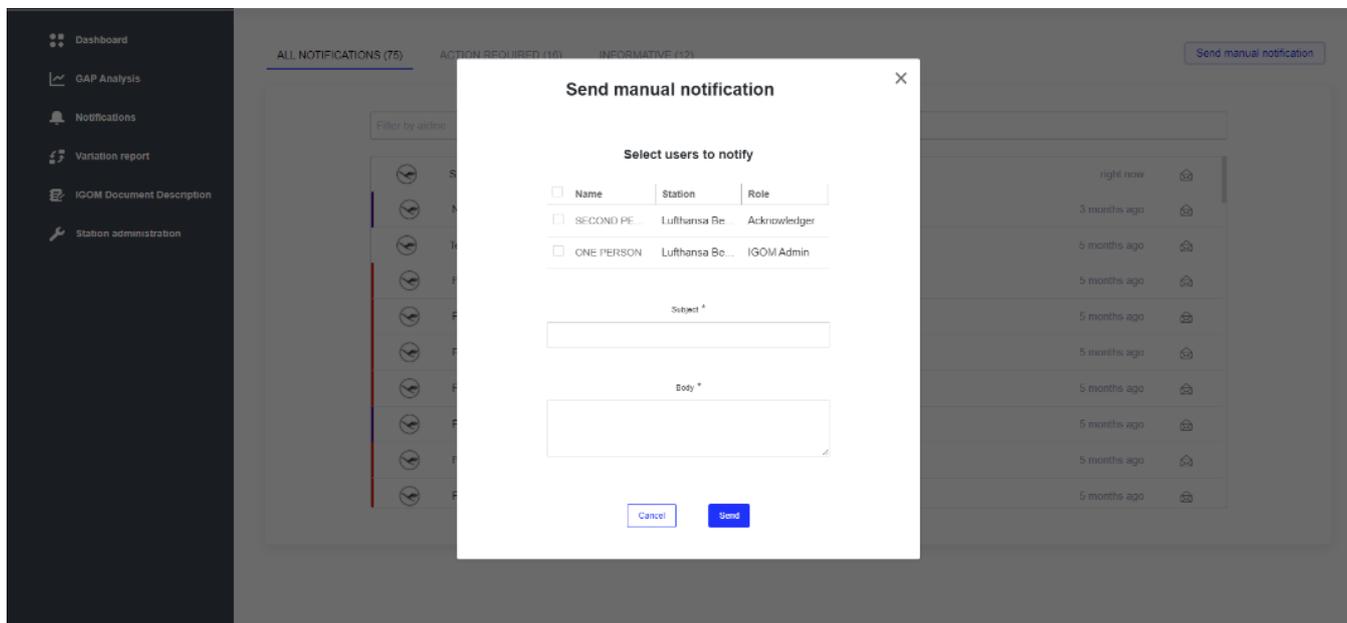

The IGOM Admin can use the **Send manual notification** button to send a notification to a list of users at any time.

ALL NOTIFICATIONS (74) ACTION REQUIRED (16) INFORMATIVE (12) [Send manual notification](#)

Filter by airline

	New IGOM published View detail	3 months ago	
	Test subject multiple users View detail	5 months ago	

This notification will have a subject and body and it can include free text.

4.9 Variations Report

The Variations Report page displays the variations identified in a specific gap analysis. Instead of manually going through a whole GAP Analysis document, the Variations Report makes it much easier to see what variations were identified in the document. The Variations Report includes a list of all the companies with which your company has established a group relationship, granting access to them. To access the detailed variation report, a **Go to Report** button is provided.

The relevant information about them is summarized in columns such as:

- Name of the GAP Analysis
- IGOM version
- Effective Date

User Guide to Ground Ops Platforms

Version: 02

Publication date: 31-Aug-2023

Lufthansa [Change station](#)
Koeln, Germany

GAP Analysis	Type	IGOM version ...	Effective date
Lufthansa GOM (Test)	Published	IGOM Ed.10 R.1	2021-11-03

Selected GAP Analysis:

Aircraft General Safety/Service Operations

Ramp Safety in Aircraft Handling

GAP Analysis	IGOM
GHP R.101 - 3.2 Danger Ar...	3.1.2 Engine Danger Areas

Once in the report area, a dropdown menu will allow the user to select which GAP Analysis to check. There is an option to select a previous version of the GAP Analysis, and, if selected, the page will refresh showing the variations for that selected version.

Air test [Change station](#)
Spain

IGOM Ed.12

GAP Analysis	Type	IGOM version ...	Effective date
IGOM edition 12 cloning Test (Ra...	Published	IGOM Ed.12 R.0	2023-07-06

Selected GAP Analysis:

Aircraft General Safety and Servicing Operations

Ramp Safety in Aircraft Handling

GAP Analysis	IGOM
IGOM Ed.12 R.0 - Engine ...	3.1.2 Engine Danger Areas

Once a GAP Analysis is selected, the variation list is displayed, sorted by chapter and section. In this way, it is possible to see either all the variations at once, or just the ones related to a specific chapter.

The Variations Report will show:

- IGOM item (chapters, subchapters).
- Name.
- Mapping to the company's own GOM document.
- Comments field.
- Attachments that were used to provide extra information about the variation. Any attachments will be downloadable for local storage.

4.10 IGOM Document Description

The **IGOM Document Description** section is used by IATA to upload the IGOM manual every time there is a new edition or update. It also allows any account member to see the structure of the IGOM document.

When this page is accessed, it defaults to the latest IGOM edition. The document is displayed with collapsible sections and navigation through chapters and subchapters, so it is easy to view, read and navigate.

The latest IGOM edition highlights the items that have been changed from the previous edition. Different colors are used to indicate if the item has either been added or modified compared to the previous edition. When the item is deleted from the previous version, an "x" is placed where the item used to be. An arrow "∧" on the right side of each section allows the section to be collapsed.

Next to the current IGOM document title, there is a link that allows the user to select another IGOM document edition.

4.11 Account Suspension

It is the duty of each user to keep their information in the portal up to date with the current IGOM edition. Each new edition of IGOM has a publishing date and an effective date set for three months after the publishing date. It is expected that all users will review/update their information in the GAP Analysis before the effective date. The account will be suspended if the user fails to update the information within eight months of the effective date.
