

IATA Flight Data Connect Workshop

Date: Tuesday, 25th April 2017

Time: 17:30-18:30 / **Location:** TBA

(Seats are limited. Registration is first come, first served)

Target Group	This workshop is intended for airline employees working in safety or flight operations departments
Workshop Objectives	The objective for this workshop is to demonstrate the potential of Flight Data Connect. The attendees will be shown how this powerful service can improve the safety level of their organization and help them in many other areas such as fuel saving, engine health, and maintenance.
Summary	 <p>The International Air Transport Association (IATA) has teamed up with Flight Data Services, a global leader in Flight Data Monitoring and Flight Operations Quality Assurance, to bring to you Flight Data Connect.</p> <p>Flight Data Connect is a unique, industry-leading flight data analysis service, which allows airlines to outsource this function to an external provider easily and securely.</p> <p>In addition, Flight Data Connect is the only flight data monitoring (FDM) service in the world that allows the user to identify commercial flight safety issues for a wide variety of safety topics, for many types of aircraft, across a global database. It also allows flight operations and safety departments to proactively identify safety hazards.</p> <p>Join our interactive demonstration to see how you can monitor your flight safety events and exceedances, receive reports, graphs and visualization within minutes of upload. We will also demonstrate the capabilities of the platform for data sharing for operators.</p>
