

IATA Aviation Safety Culture Survey (I-ASC) Workshop

Date: Monday, 24 April 2017

Time: 1730-1830 / **Location:** TBA

(Seats are limited. Registration is first come, first served)

Target Group	Safety Managers and anyone involved in supporting the safety management requirements of their organization
Workshop Objectives	This workshop is designed to introduce participants to the IATA Aviation Safety Culture survey and its benefits, including how it supports safety management requirements.
Summary	<p>If you are already performing your own internal safety culture survey, I-ASC will not only help you save time and resources - you will also access expert analysis of results that you can benchmark to the industry.</p> <p>The Workshop will cover the survey framework, features and an overview of the survey process. A review of a sample I-ASC survey report will also be provided, allowing participants to evaluate its benefits and practical applications. It also includes a communication plan to help you roll out the survey to your employees.</p>  <p>In addition to standard features, the survey can be customized for the specific needs of your airline. Survey results can be further analyzed by hierarchy, years of service, geography, operational sections, etc. The operational sections are aligned with IOSA, to facilitate links with audit findings and comparability across the industry.</p> <p>IATA can facilitate further in-depth analysis, including the identification of behavioral factors, and help with defining an action plan to address any gaps identified by the survey.</p> <p>Join this Workshop to learn more about the added value of I-ASC to your safety management processes.</p>

SAFETY AND FLIGHT OPS CONFERENCE

SEOUL, REPUBLIC OF KOREA
24 — 26 APRIL 2017
