

## **IATA CONSULTING – CIVIL AVIATION AUTHORITIES REGULATORY OVERSIGHT & INSTITUTIONAL DEVELOPMENT**

As air transport expands at an increasingly rapid pace, civil aviation regulatory institutions face more complex challenges to enhance flight safety and security that protect consumers and sustain development. With escalating traffic growth, new players in the marketplace, technological improvements, and larger new airport infrastructure, the modern civil aviation regulatory organization must ensure that it is equipped to provide appropriate levels of regulatory oversight. Qualified staffing, training and sustainability are all issues that must be addressed by the Civil Aviation Authority of the 21st century.

IATA offers a wide range of consulting services in civil aviation. These range from the development of primary legislation and regulations to institutional development and structuring, as well as preparation of National Civil Aviation Security Plans, Airport Emergency and Contingency Plans, and Safety Management Systems (SMS). Some of the activities (such as SMS) are conducted from the perspective of the operator as well as for the regulator.

IATA has successfully completed projects in Africa, Central and South America, Asia, the Caribbean and the Middle East in civil aviation policy, strategy and regulatory oversight on behalf of governments, regional and international organizations, and Civil Aviation Authorities.

- ✦ IATA offers an unequalled expertise to assist in fulfilling the vision for a safer, more competitive and sustainable civil aviation industry.
- ✦ Organizational Structuring and Institutional Development of Aviation Regulatory Authorities
- ✦ Safety and Security Oversight Capacity Building
- ✦ Economic and Technical Laws and Regulations
- ✦ Economic Oversight of Privatized Aviation Infrastructures
- ✦ Provision of Flight Operations, Airworthiness and Licensing Inspection Services
- ✦ Development of Liberalization Strategies
- ✦ Implementation of National Aviation Security (AVSEC) and Facilitation Programmes
- ✦ Safety Management System Implementation
- ✦ Change Management
- ✦ Strategic Alignment
- ✦ Development of financing mechanisms for regulatory oversight.
