

# How does Weblink work?

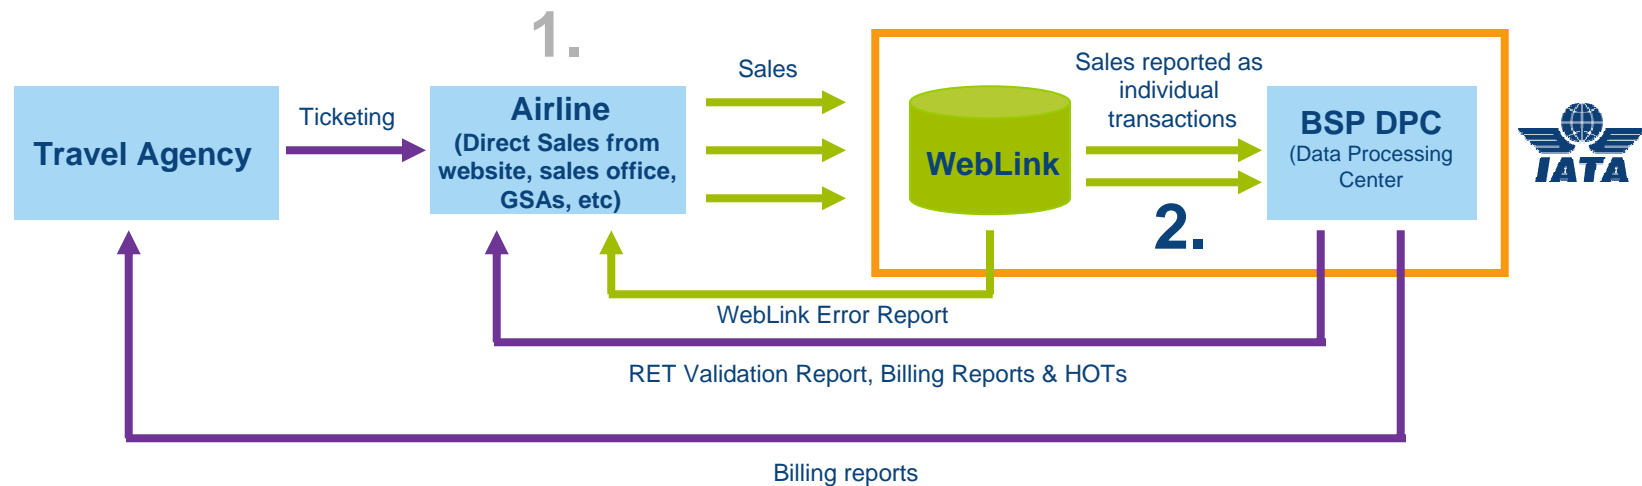

# How does WebLink work?

1. Travel agencies book and issue tickets directly on the airline reservation system for each BSP. The airline creates and uploads the sales files (RET or TCN format) on WebLink using BSPLink.

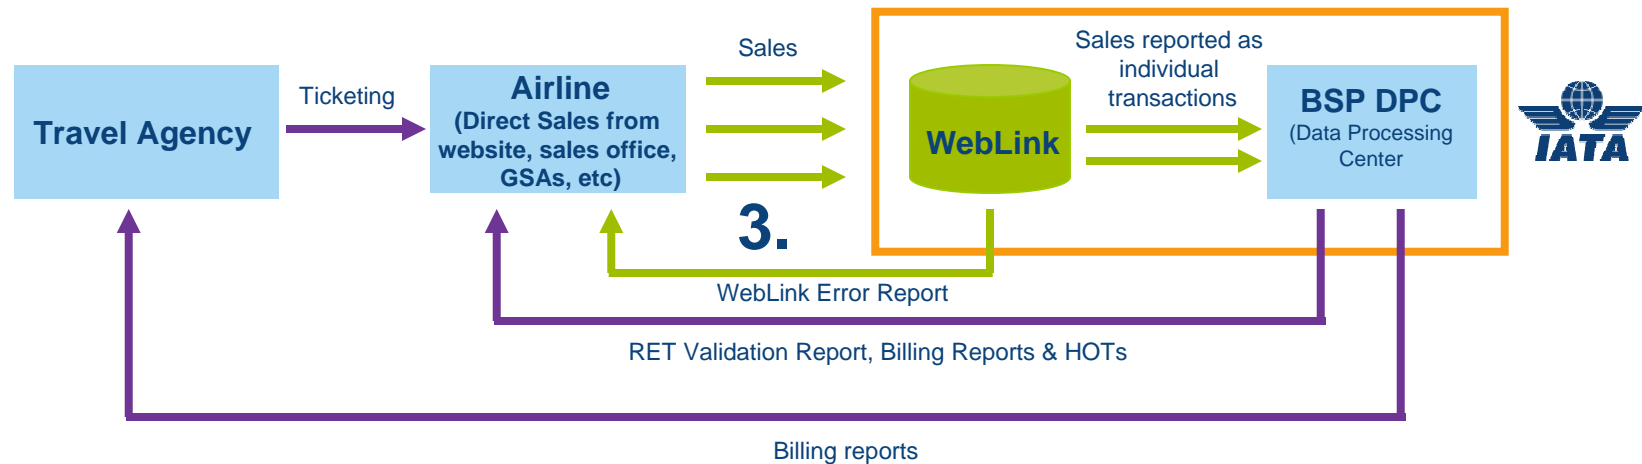

# How does WebLink work?

1. Travel agencies book and issue tickets directly on the airline reservation system for each BSP. The airline creates and uploads the sales files (RET or TCN format) on WebLink using BSPLink.
2. The file is then processed by WebLink.

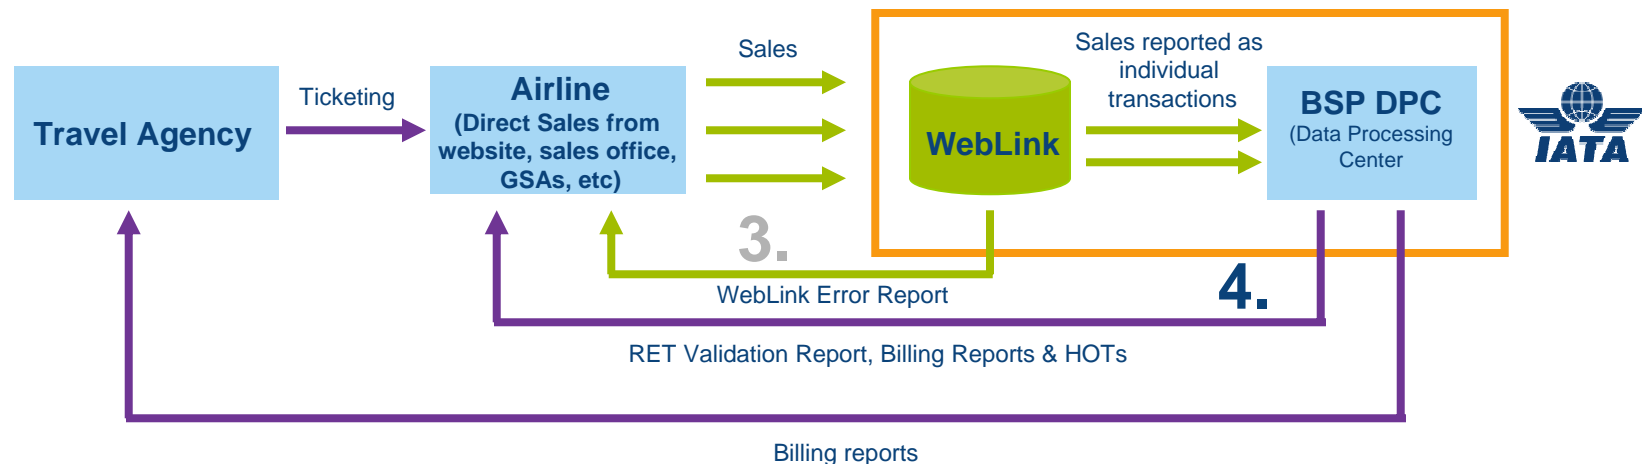

# How does WebLink work?

3. WebLink parses the airline direct sales file by country, validates the integrity of each transaction and generate an error report (available on BSPLink).

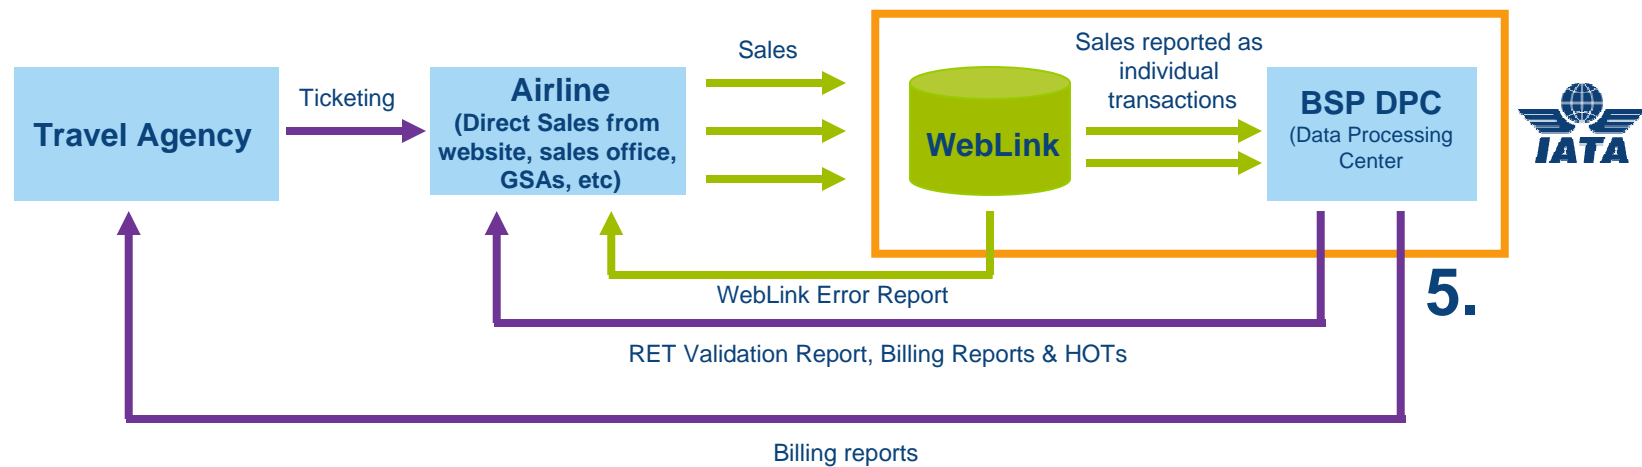

# How does WebLink work?

3. WebLink parses the airline direct sales file by country, validates the integrity of each transaction and generate an error report (available on BSPLink).
4. WebLink generates a DISH standard RET file in the required revision, which is sent to the BSP / DPC for billing and settlement processing.

## How does WebLink work?

5. As a part of the standard BSP process in place today, the airline receives all the traditional BSP output, including Billing Reports, HOTS, and RET Validation Reports back from the BSP via the airline's preferred method.
