

# It's taking off!

## See how the industry is reaching new heights.

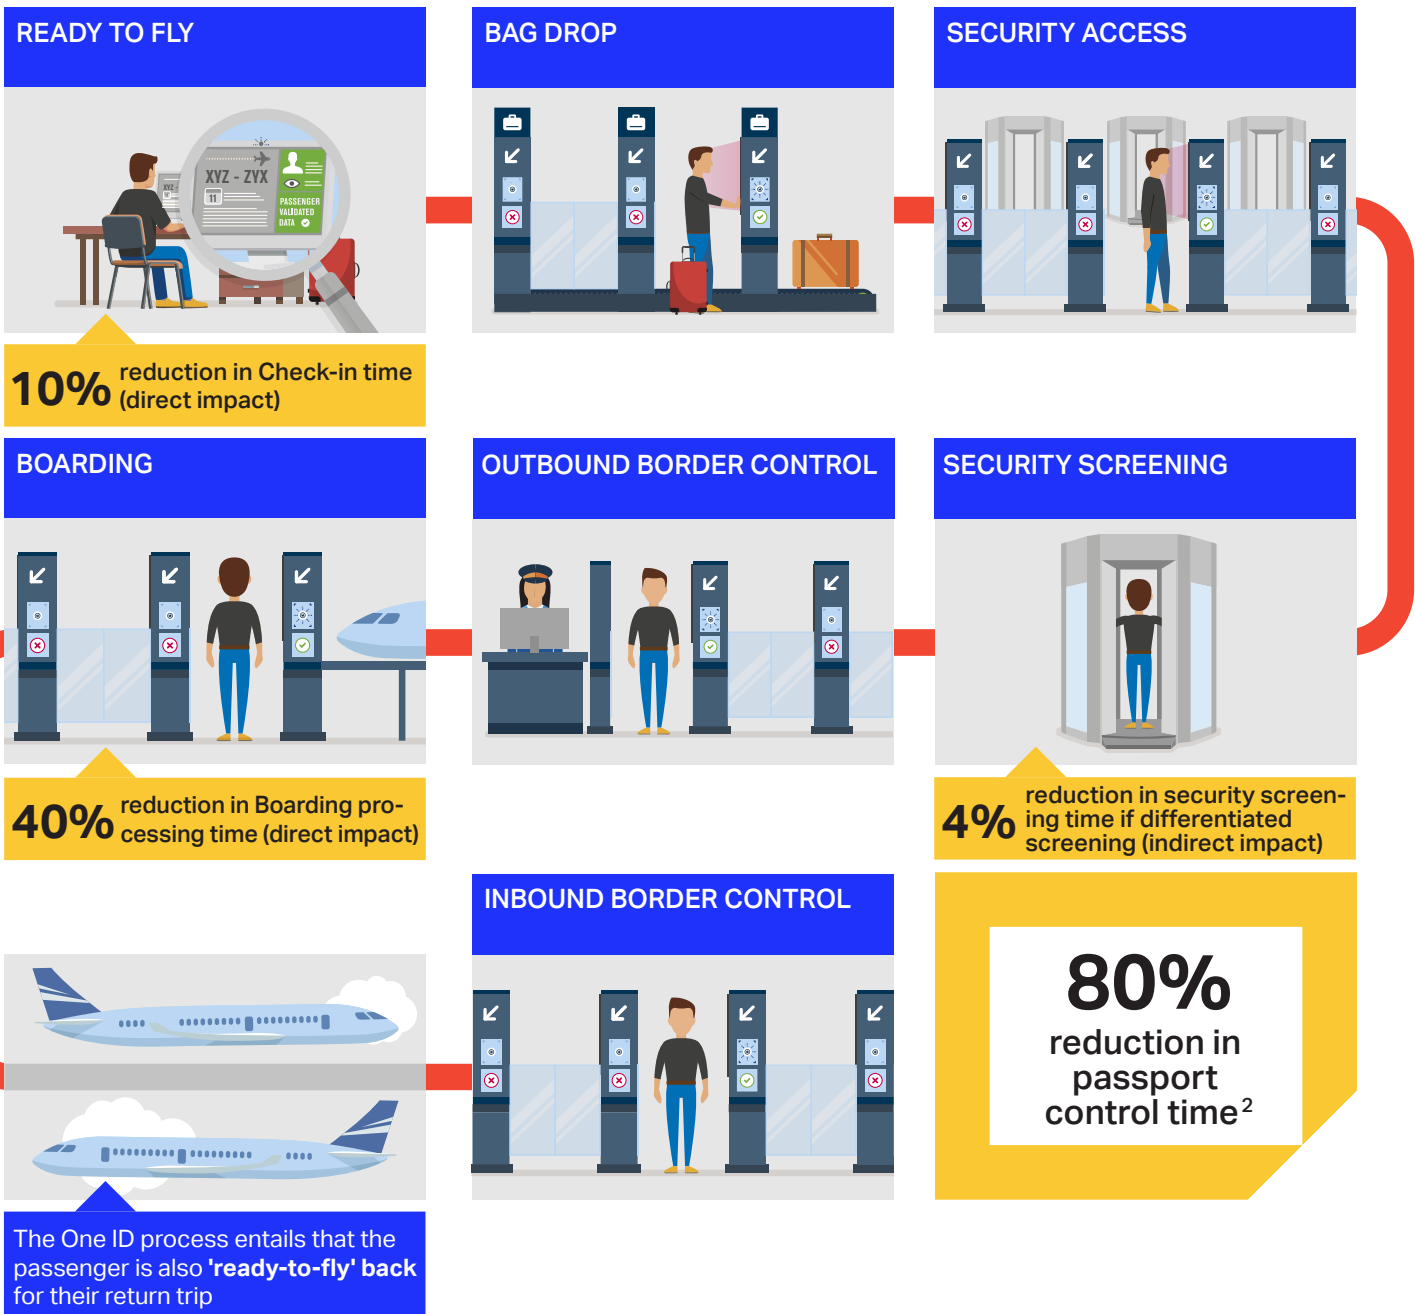

The number of air travelers is expected to double to 8.2 billion by 2037<sup>1</sup>. IATA's One ID brings us together to establish a common vision and roadmap for a seamless, efficient, and secure identity management solution, that will address the existing and future pressures shared across airlines, airports, and governments.

Here is how One ID's leveraging of technology and cross-stakeholder collaboration can vastly improve passengers' journeys and experiences.

Upon passenger's consent, their data is collected, admissibility is validated, and their identity is confirmed. The **passenger data set can then be shared, used, and amended by all stakeholders** across the end-to-end journey (departure, transfer, arrival, and return trip) on an authorized and need to know basis.

**At every touchpoint, the passenger is biometrically recognized and their identity is validated** – No need to present identity documents and boarding pass!

**From each touchpoint, the passenger's data set will be populated with actionable information** (in reference to the Identity Management Platform concept).

\* All the percentages used above (unless stated otherwise) come from the IATA NEXTT Cost Benefit Analysis and these are estimations based on industry-wide possible gains and reductions.

<sup>1</sup> IATA (2018) *IATA Forecast Predicts 8.2 billion Air Travelers in 2037*. Available at <https://www.iata.org/pressroom/pr/Pages/2018-10-24-02.aspx>

<sup>2</sup> Passport control time is estimated to reduce by 80% for inbound and outbound passenger journeys.
