

# Cyber Aircraft Incident – Part 1

## Co-Chairs:

- Reid Sawyer (Marsh USA) and Steve Lloyd (JLT)

## Panelists:

- John Bayley (McLarens)
- Elmarie Marais (Go Crisis)
- Jette Varnals (AXA/XL)
- Theresa Gallagher (Global aerospace)
- Peng Lim (Kennedys)
- Rob Lawson (Clyde and Co.)
- Edward Spencer (HFW)
- Bart Banino (Condon and Forsyth NY)
- Bruce Carman (Hive Aero)

# Scenario Part 1

## INCIDENT TAKES PLACE

Aircraft crashes in UK.

International flight/strict and (effectively) unlimited pax liability.

Passenger manifest multinational including multiple US citizens and therefore various jurisdictions.

US aircraft manufacturer.

Early speculation of Avionics /software issue /malfunction.

Speculation turns to firm reports of avionics/software issues plus intelligence reports that this could be a malicious (terrorist act) via an employee/contractor introducing malware during aircraft maintenance.

This is followed soon after by a terror organization claiming responsibility and declaring that this malware will affect multiple aircraft worldwide.

# Scenario Part 1 (Cont'd)

Speculation turns to firm reports of avionics/software issues plus intelligence reports that this could be a malicious (terrorist act) via an employee/contractor introducing malware during aircraft maintenance.

This is followed soon after by a terror organization claiming responsibility and declaring that this malware will affect multiple aircraft worldwide.

# Scenario Part 2

(i) No further incidents have occurred so a broad discussions for all the panel on multiple issue and considerations occur :

- PR – how this is all managed especially as the narrative develops and changes in terms of the cause of loss and the wider implications . (What the airline has to do next to limit the damage (alert all authorities, airlines, manufactures etc.)
- PR and interaction with the authorities/intelligence services etc.
- Assume formal grounding/recall/make good?). Coverage discussions vis a vis the airline loss going from AR to war as well as what coverage exists for grounding and products. Clearly many of these costs will be uninsured. But all software is made safe and no further losses.

(ii) another incident occurs with all speculation and evidence pointing to a 2nd attack.

# **Update ISAGO/IOSA**

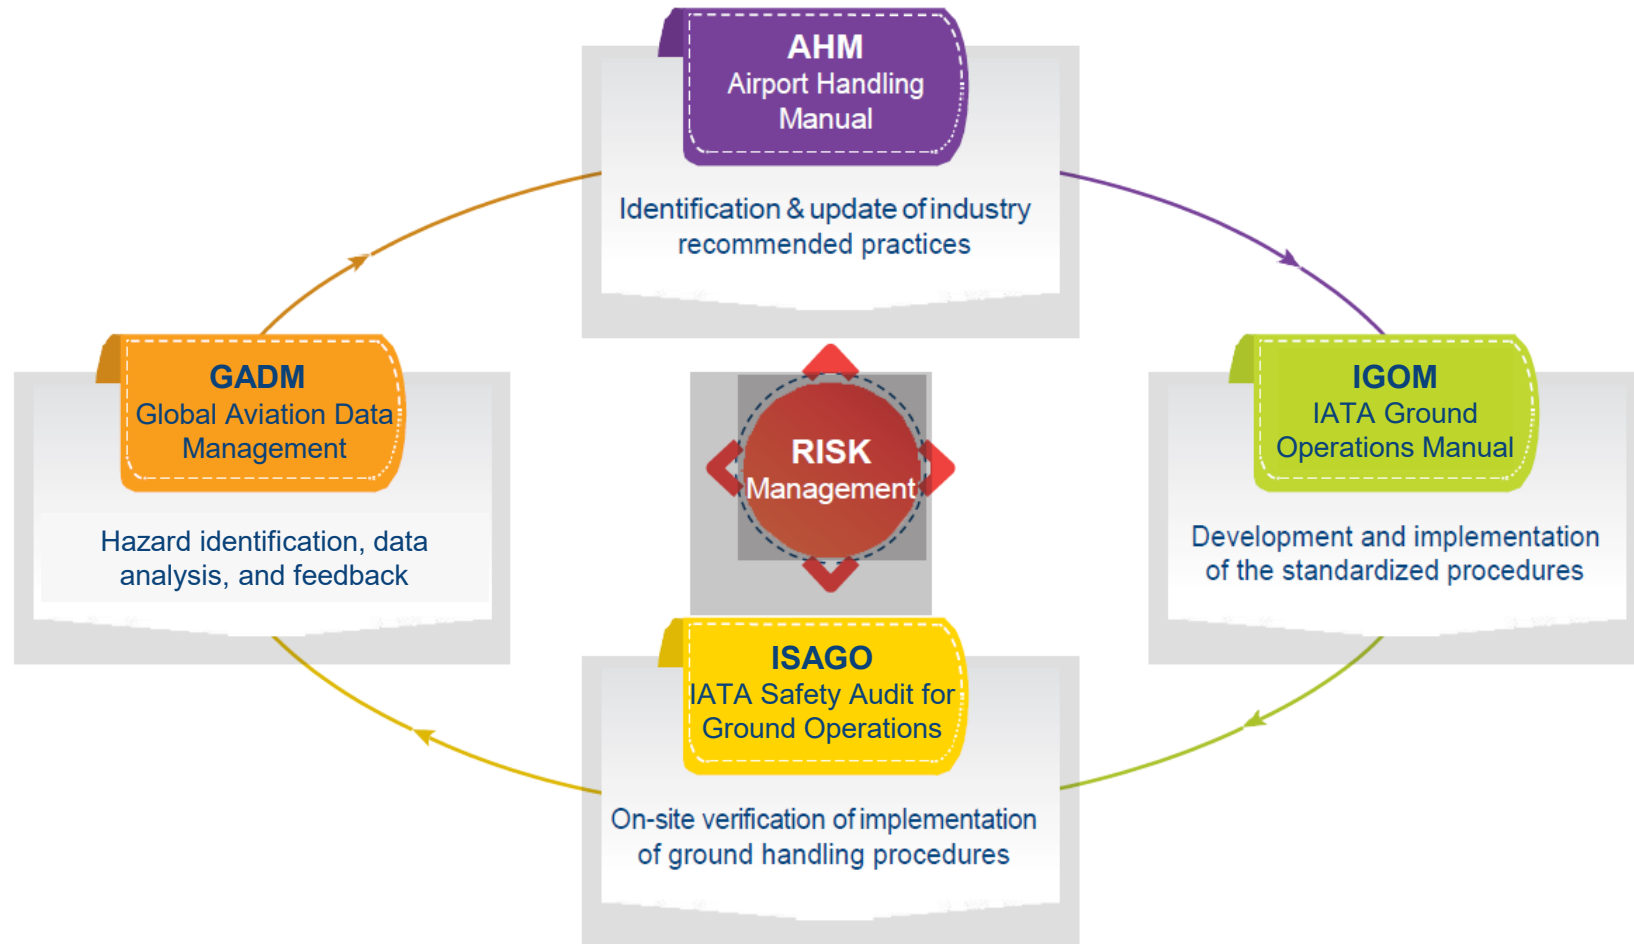

**Catalin Cotrut**  
**Director Audit Programs**  
**Safety & Flight Operations**

# IATA SAFETY AUDIT FOR GROUND OPERATIONS

# IATA Integrated Solution for Ground Operations

Risk management is the key to connecting the critical components in ground operations

# Management of Safety

- 2016-2019 ISAGO strategy to implement full SMS
- All SMS provisions now standards
- Compliant with ICAO SMS for air & aerodrome operators
- ISAGO audits assess SMS implementation
- ISAGO assessment in airline risk management

# Management Systems

- ISAGO Headquarters audits assess corporate management & oversight of ground operations at all stations
- Includes corporate management of development and implementation of processes & procedures
- ISAGO Station audits assess implementation and compliance with corporate processes & procedures

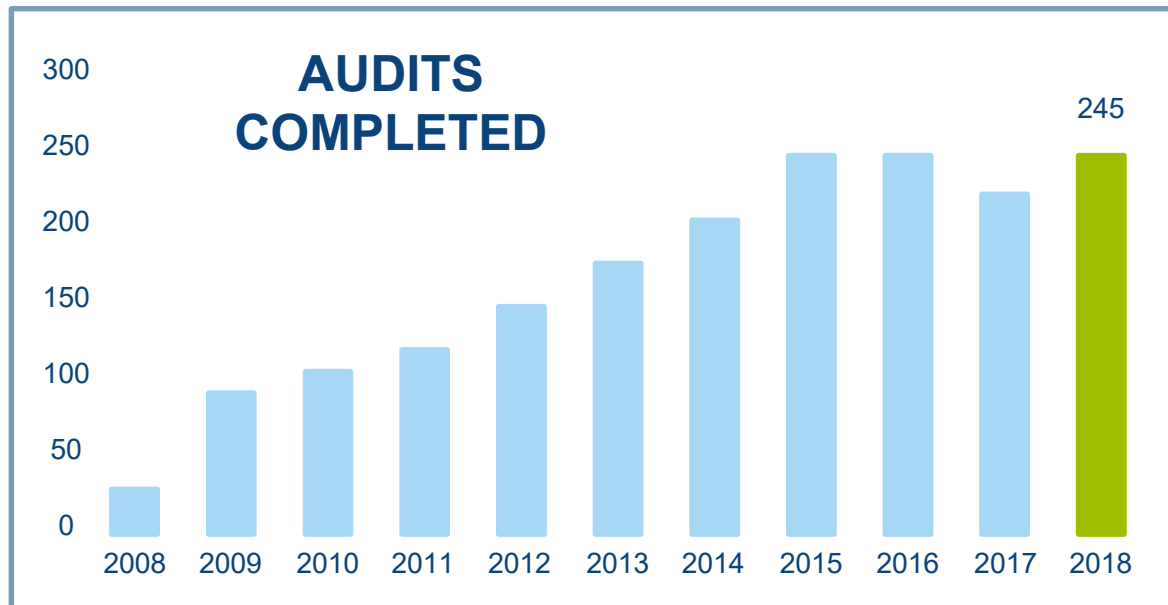

# Standardization

- ISAGO standards founded on industry best practices
  - IGOM, AHM and IATA cargo best practices/regulations incorporated
  - Updated annually
- Complementary to IOSA standards for ground & cargo operations

# ISAGO – New Model first year facts and figures

47 CoPA members  
56 Candidate Auditors

# ISAGO Registration – Current Status

➤ 184 GSPs ISAGO Registered

➤ operating at 311 stations at

➤ 212 airports worldwide

# New ISAGO Registry

The screenshot displays the ISAGO Registry interface. On the left is a world map with yellow and green markers indicating registered airports. Two pop-up windows are overlaid on the map:

- CDG Pop-up:**
  - Image: Aerial view of the CDG airport terminal.
  - GSP1:** ISAGO Registration Expiry : 21 Nov 2019. Services provided: CRM, LOD, PNB, HDL, AGM.
  - GSP2:** ISAGO Registration Expiry : 18 Sep 2019. Services provided: CRM, LOD, PNB, HDL, AGM.
- BLR Pop-up:**
  - Image: Aerial view of the BLR airport terminal with an aircraft on the tarmac.
  - HQ Expiry Date:** 04 Dec 2020
  - Station Expiry Date:** 17 Apr 2021
  - Services provided:** CRM, CGM.

# ISAGO 2019

- Similar expectations to 2018
- About 300 audits (over 50 new locations)
- Board of Governors request to explore potential mandate of ISAGO for IATA member airlines

# ISAGO – next steps

## ➤ ISAGO Strategy

- Program promotion and growth

- Standardization, auditing consistency and focus on Auditor performance

- Program's success measure

## ➤ Digital transformation

- Move towards assessing SMS effectiveness

# ISAGO – GSP Insurance Cover

- Review completed
  - Aviation third party risks
  - ISAGO liabilities
- Incorporation of insurance pro forma in Audit Agreement

# IATA OPERATIONAL SAFETY AUDIT

# Statistics - IOSA Registered Airlines

13 May 2019

# IATA Operational Safety Audit (IOSA)

430

Total IOSA  
Registered  
Airlines

0.98

Global Accident  
Rate in 2018 for  
IOSA Operators

*Accidents per million sectors*

32%

Non-IATA  
Members on  
IOSA Registry

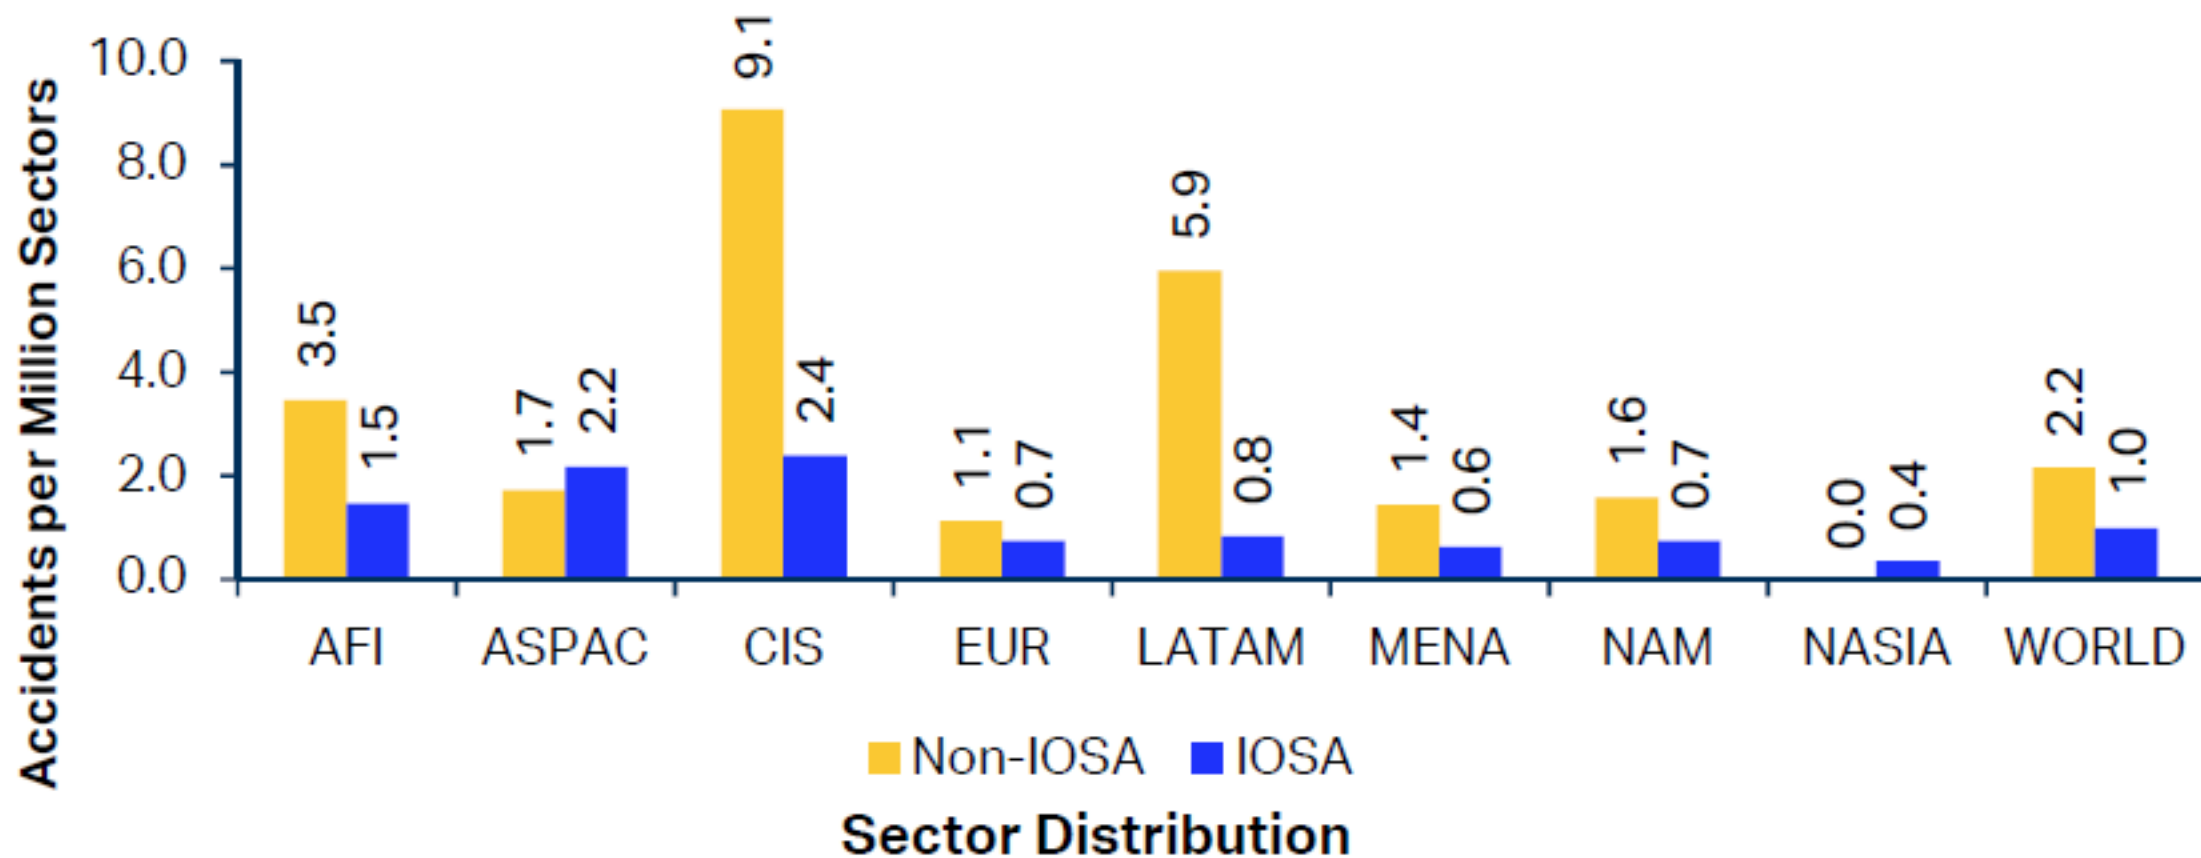

0.09

Global Fatal  
Accident Rate in  
2018 for IOSA  
Operators

*Accidents per million sectors*

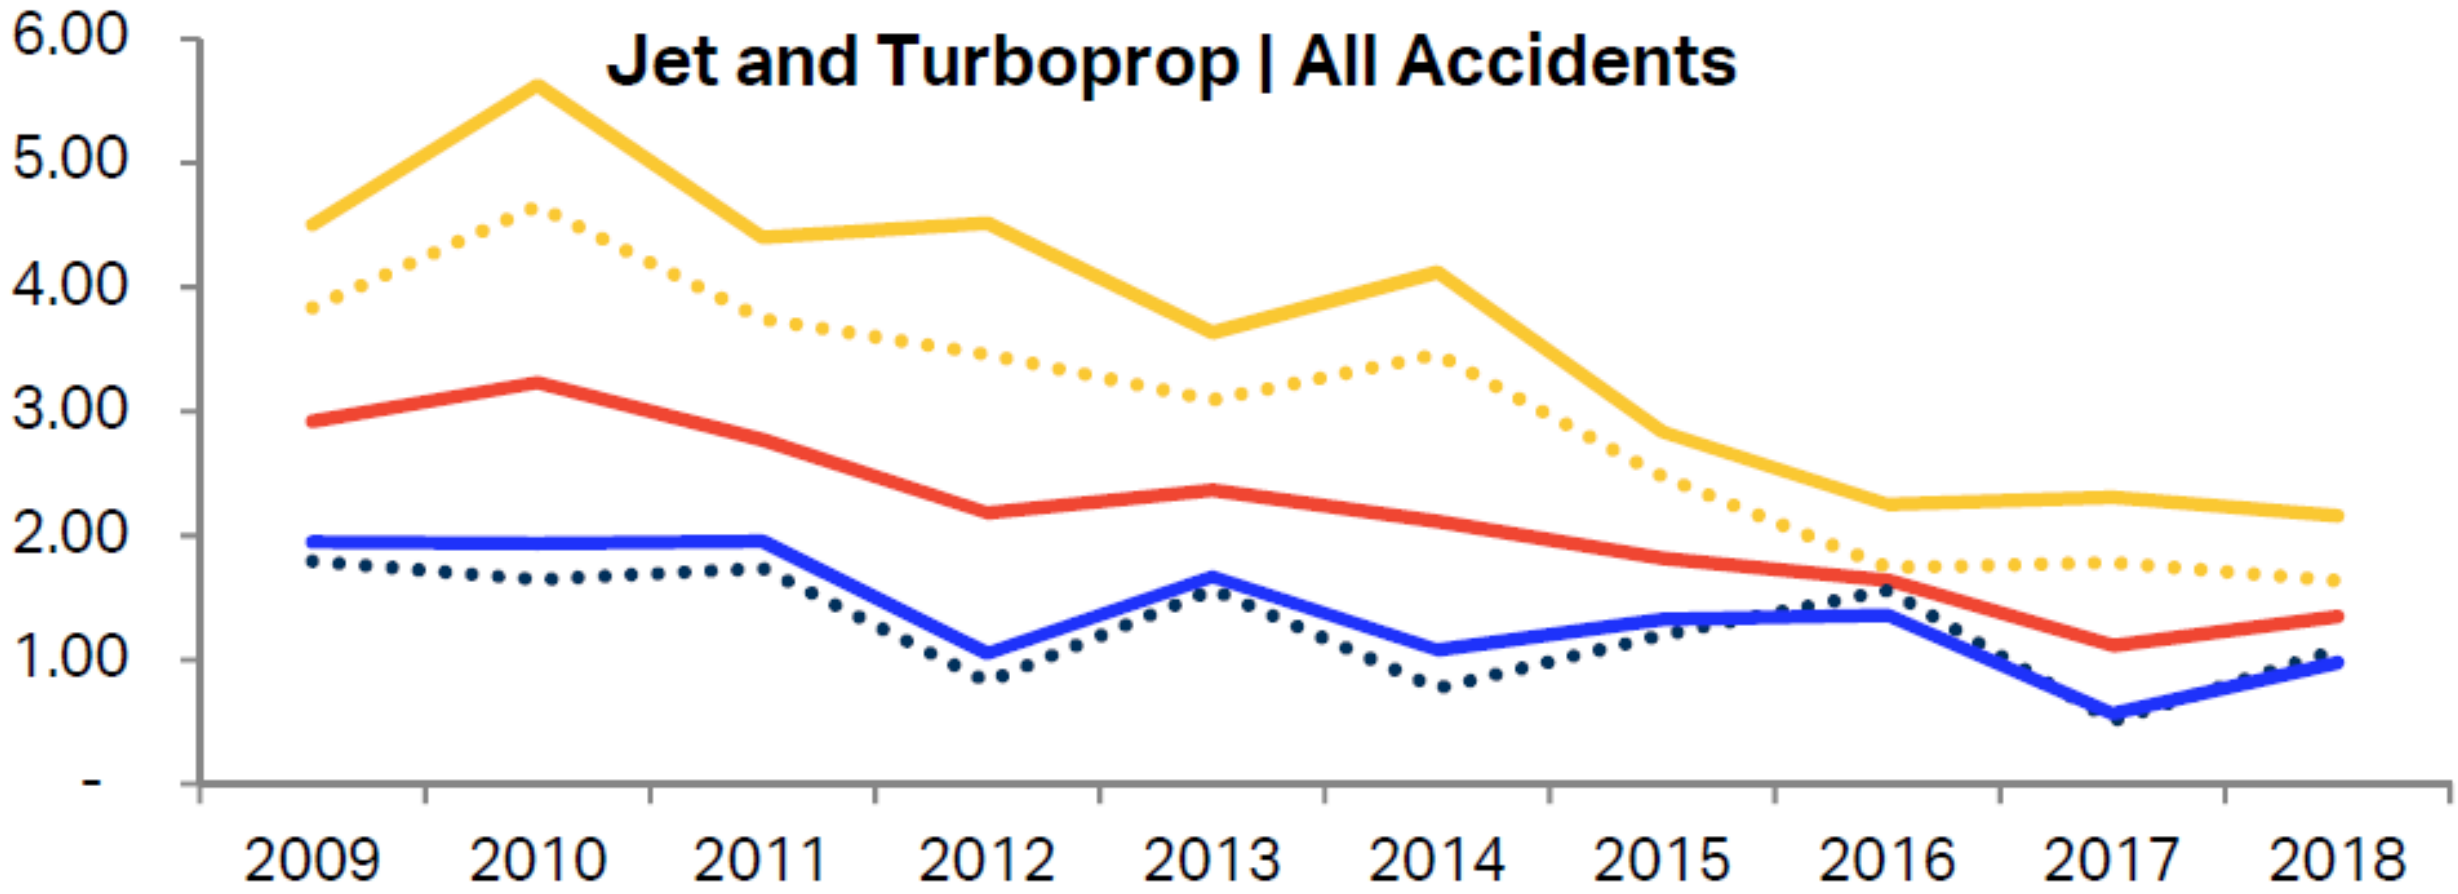

# 2018

Accidents per Million Sectors

# Jet and Turboprop | All Accidents

— Industry    ..... IATA    ..... Non-IATA    — IOSA    — Non-IOSA

# IOSA Audit and Avr. Number of Findings

No. Audits

Avr. Findings for ALL

Initial Avr. Findings

Renewal Avr. Findings

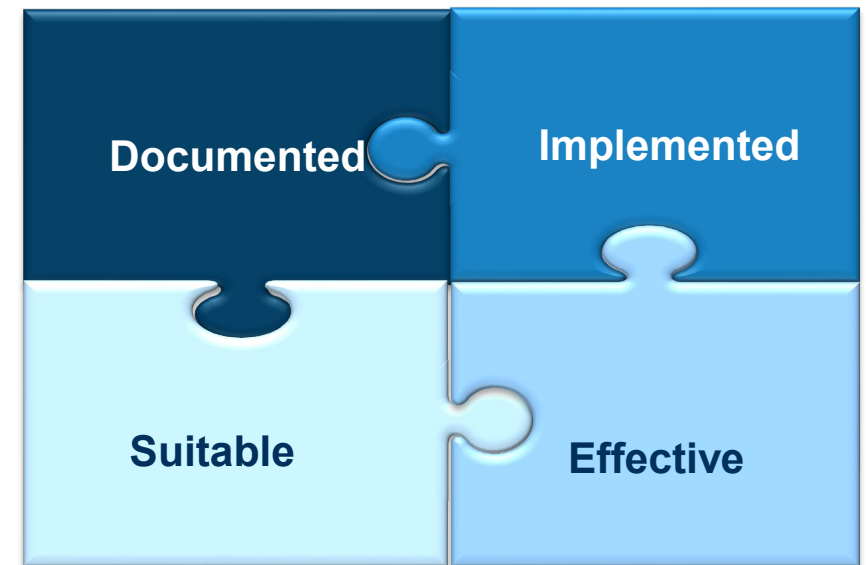

# IOSA reducing redundant industry audits

# IOSA 2019

- Continue Digital Transformation – Focus on Data Analytics
- Implementation of “Auditing the Effectiveness”
  - Flight Data Analysis
  - Risk Assessment and Mitigation
  - Monitoring of Wet-Lease, Code-share, etc.

**Thank you**
