3.	<i>Issues Fixed and Released in Production for Period of Reference</i>	5

1. Period of Reference

The incident fixes deployed on SIS production environment detailed in this Release Note document were performed on May 10th, 2018

2. Dates of releases

The Maintenance Release covered in this document was deployed on May 10th, 2018

Issues Fixed and Released in Production for Period of Reference

Deployed in Release Number	SalesForce Issue Number	SalesForce Priority	Revised Issue Summary	Release Note Communication
1.12.0	08974453	Minor	OUTGOING INVOICE MAY 2018 P1	<p>Area: ISWEB</p> <p>Issue: ISIDEC/ISXML file process was taking more than expected time. The issue has started occurring after Release 1.12 deployment. On investigation it was found that the files were taking more time during validation process. The issue has occurred due to a code change for NII security fix. Under this fix we converted String variable to SecureString wherever we store sensitive information like database password etc. After this fix, system parameter values also started passing through SecureString. Since the system parameter value contains large set of bytes and was getting fetched multiple times by validation process to validate the single file, the process started taking more time.</p> <p>The issue was that Validation Process was fetching system parameter value multiple times while processing a single file.</p> <p>Corrective Action:</p> <p>Validation Process code has been changed to fetch system parameter only once for a file</p>
