

Peter Esteie, Head of Ground Operations & Airport Safety, Airbus

Graduate of the Technical University in Delft, the Netherlands, with a degree in Aircraft Maintenance Management. Started my career in Airbus Customer Services Engineering, and moved in 1997 to the A3XX (later A380) programme, taking up a variety of positions covering systems maintenance, cargo and freighter systems and airport operations. With the A380 programme nearing the end of the development phase, I changed to take up a position in Airbus Engineering Airport Operations, heading the department for Ground Operations of all Airbus aircraft.

I'm also looking after the Airbus Technology Roadmap for Airport Ground Systems and Infrastructure, steering our RnT projects in line with our strategy.
