Miami-Dade Aviation Department

Organizational Identity: Vision, Mission, Values

Economic Powerhouse · Industry Leader · International Brand

Where we are going

MDAD VISION

Economic Powerhouse · Industry Leader · International Brand

"MIA will grow from a recognized hemispheric hub to a global airport of choice that offers customers a world-class experience and an expanded route network with direct passenger and cargo access to all world regions."

How we will get there

MDAD MISSION

Economic Powerhouse · Industry Leader · International Brand

"MDAD provides a modern, safe, and efficient world-class international gateway that delivers best in class customer service, significant economic benefits to our community and rewarding professional development opportunities to our employees."

Our guiding principles that dictate our behavior and action

MDAD Core Values

Economic Powerhouse · Industry Leader · International Brand

PROFESSIONALISM
INNOVATION
Customer Service
RESPECT
Teamwork
INTEGRITY

MDAD Core Values Statement
The MDAD Core Values are the guiding principles that dictate our behavior and action. They are the foundation of our organizational identity and the key to our success. We are committed to these values and will hold ourselves and our employees accountable to them. We will continue to work together to ensure that we are living these values every day.

MIA BY THE NUMBERS

Economic Powerhouse · Industry Leader · International Brand

1 MIA's ranking among U.S. airports for int'l freight

1 MIA's ranking among U.S airports in total carriers - only U.S. airport to offer passenger and cargo service on 106 different carriers

3 MIA's ranking among U.S. airports for int'l passengers

31.5 MIA's economic impact measured in billions of dollars

37.5 Number of direct jobs at MIA measured in thousands

40 Percentage of Florida's total international trade value handled through MIA

57.3 Value of MIA's imports and exports in billions of dollars

44.6 MIA's passenger total measured in millions – 7th consecutive record year

65 Percentage of int'l visitors to FL who travel through MIA

96 Percentage of Miami visitors who arrive by air

271 Number of direct and indirect jobs supported by MIA measured in thousands

GLOBAL ROUTE NETWORK

Economic Powerhouse · Industry Leader · International Brand

169 Passenger Destinations
107 Freight Destinations

MIA 2017 – NEW AIRLINES & ROUTES

Economic Powerhouse · Industry Leader · International Brand

Qatar Airways Cargo – South America / Europe / Middle East

February, 2017

Volaris – Mexico DF / Guadalajara

February, 2017

First Air – Mount Hope, Ontario Canada

February, 2017

WOW Air – Reykjavik, Iceland

April, 2017

Avianca Brazil – Sao Paulo, Brazil

June, 2017

American Airlines – Omaha, Nebraska

July 2017

TACA Peru (New All-Cargo service) – South America

August 2017

Aer Lingus – Dublin, Ireland

September, 2017

SAS – Stockholm, Sweden

October 2017

Frontier – Buffalo, New York
Islip, New York
Milwaukee, Minnesota
Providence, Rhode Island
Trenton, New Jersey

Fourth Quarter 2017

Amazon Prime Air

October 2017

EL AL – Tel Aviv, Israel

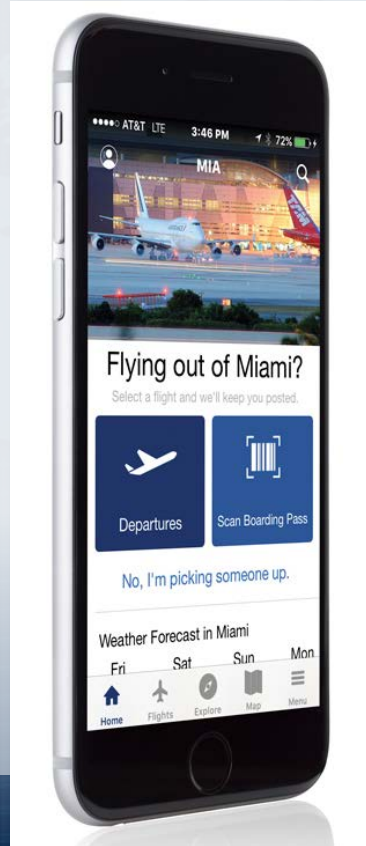

November, 2017

MIA – TECHNOLOGY: (Passenger Experience)

MIA – AWARDS & ACCOLADES

Economic Powerhouse · Industry Leader · International Brand

Freighters World Awards - Best Freighter Hub 2017

2017 Future Travel Experience (FTE) - Best Immigration Initiative

*J.D. Power 2017 N.A. Airport Satisfaction Survey –
Best Food, Beverage & Retail Airport in North America*

ACI-NA - Airports Council International-North America Inclusion Champion

AAAE - American Association of Airport Executives' Airport Innovation Award

*USA Today 10 Best Readers' Choice Awards
Best Airport for Shopping*

American City Business Journals – Top 10 best-run airport in America

ACI-NA – Environmental Achievement Award for Sustainability Project

Value of Data and the Internet of Things

Economic Powerhouse · Industry Leader · International Brand

All things that can be connected will be connected

Leveraging the Internet of Things

Economic Powerhouse · Industry Leader · International Brand

- **Improve** customer service
- **Grow** revenues
- **Streamline** operational efficiency

Data Driven Challenges

Economic Powerhouse · Industry Leader · International Brand

- Customer Expectations
- Technology
- Lack of Holistic Approach
- Legal and Regulatory Compliance
- Fear of Cyber Attack

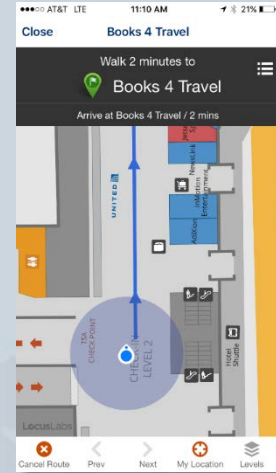

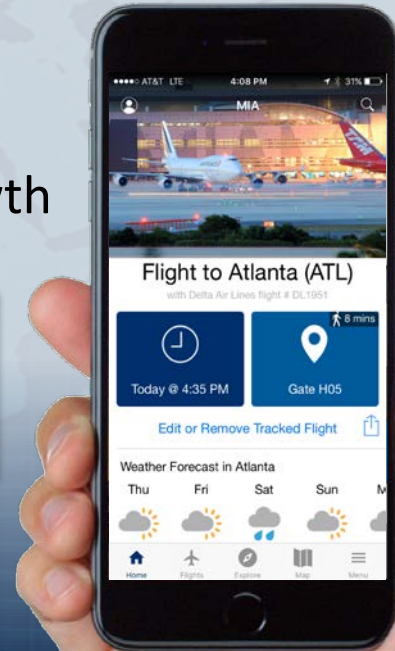

Data Sharing Benefits All Stakeholders

Economic Powerhouse · Industry Leader · International Brand

- Gain a 360-degree view of the customer experience
- Correlate customer value to experience
- Create journeys designed to drive value growth

ECONOMIC POWERHOUSE • INDUSTRY LEADER • INTERNATIONAL BRAND

THANK YOU!

Flightglobal

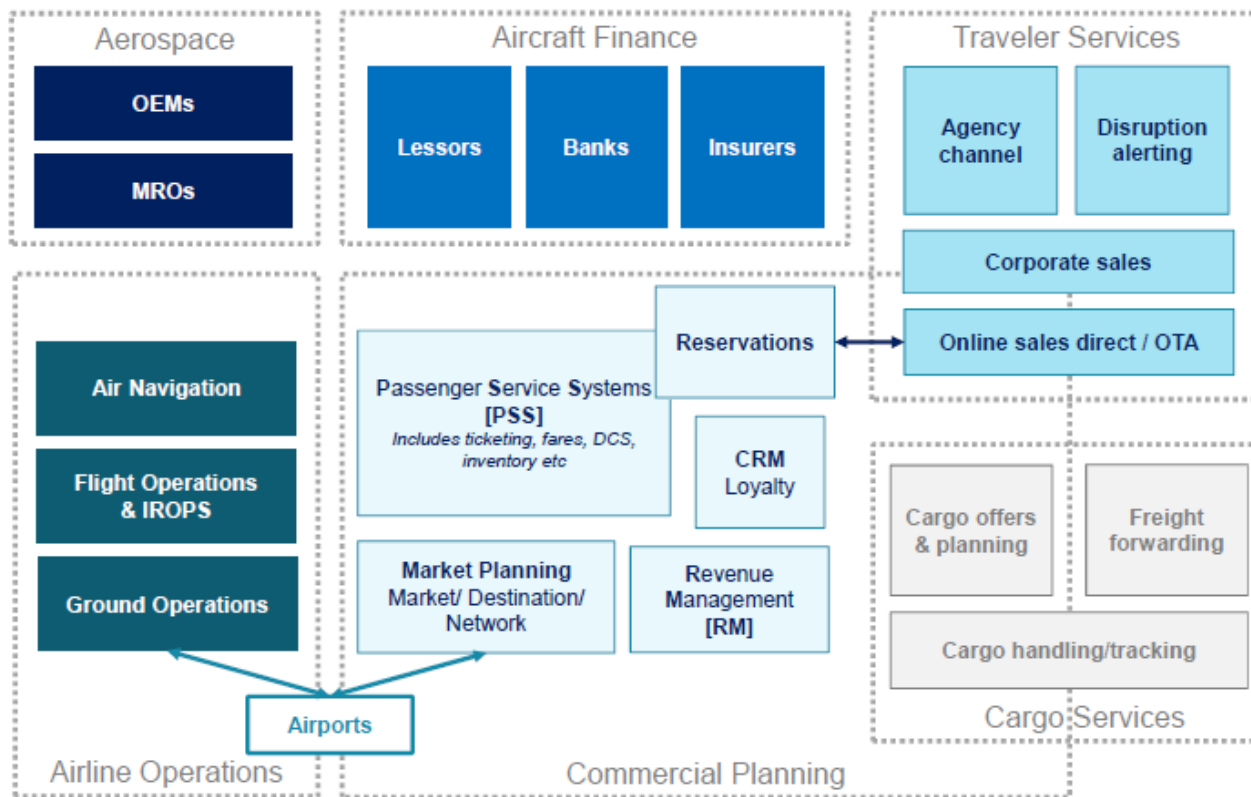

Why is FlightGlobal talking about data?

FlightGlobal is part of RELX Group

Aviation generates lots of data, much of it locked in siloes

Airlines face particular “Big Data” challenges

- Often highly siloed organizations
- Must conform to multiple and very different regulatory regimes (e.g., antitrust, flight operations, maintenance, privacy...)
- Legacy IT investments in many cases
- Wide geographic scope of operations

Data & analytics challenges are probably greater for an airline than most other companies of equal size

What is the value of Big Data?

- Transactions
 - Good: revenue
 - Bad: fraud, parts failures, etc.
- Lead time to manage transactions
 - Add lead time by monitoring behavior (whether customer clickstream data or engine EGT behavior)
 - Behavior data can be anywhere from 10x-1000x transaction data

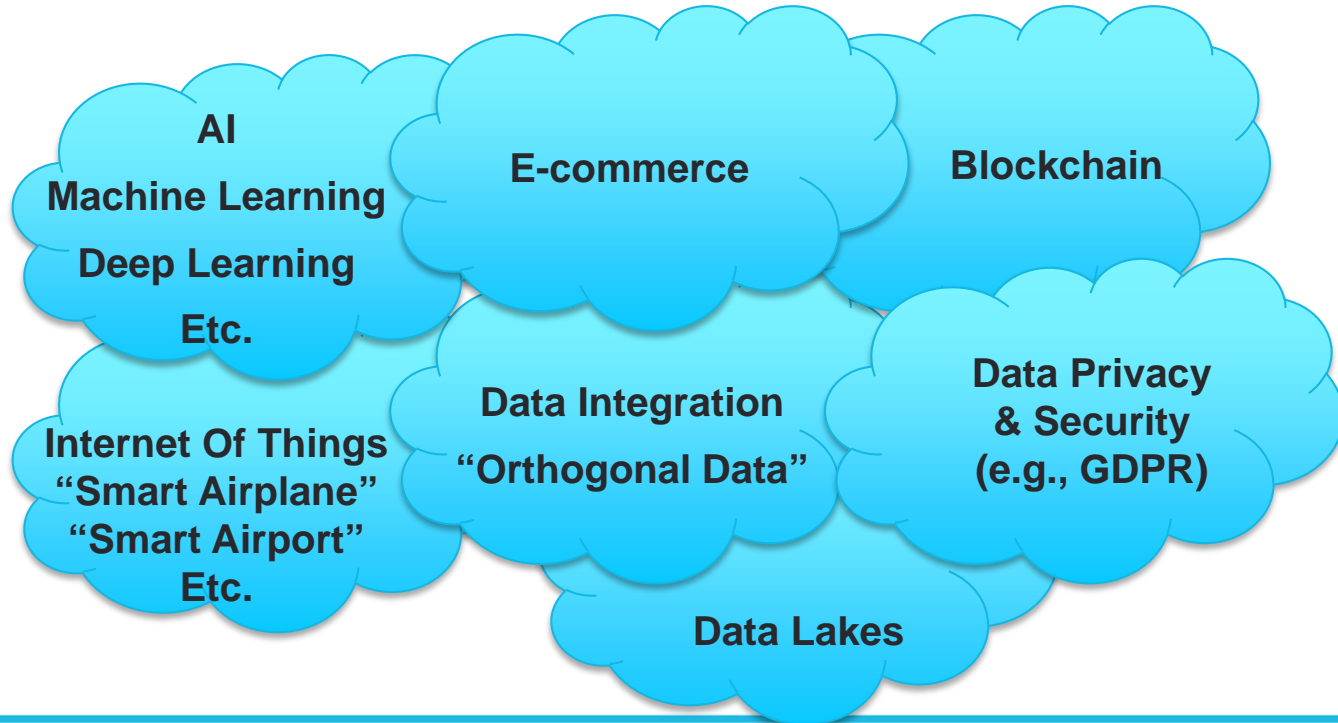

**It's relatively easy and cheap to start collecting
Big Data... and quite another to leverage it**

Key trends are hiding in a fog of buzzwords

Some Personal Favorites...

How did “BI” buzzword work out for airlines?

Promise

- Single version of truth accepted across the organization
- Capture data at the level of detail generated by the business (no aggregation)
- Make relevant data available to improve thousands of small decisions as well big ones

Current reality

- People still argue about the numbers and underlying allocations
- Increasingly done, but not leveraged
- Hard to break down internal barriers to data sharing
- “Data lakes” can turn into “data swamps” without careful governance

Most important trends change “real life”

How the possible becomes reality

- Technical Feasibility (“works in the lab”)
 - Proven but not yet commercially viable
- Financial Feasibility (“works in a spreadsheet”)
 - Commercially viable if market responds as hoped
- Human Feasibility (“works in real life”)
 - Regulators approve
 - Humans accept (and change behavior to use new technology!)

So what are the most important trends?

My picks for top 3 data/analytics trends driving change in next five years:

- Sensors everywhere
- Rise of data analytics
- True data integration / data fusion

Sensors everywhere

- Proliferation of sensors is unleashing a data flood – for example:
 - Near-real time tracking of bags, freight and passengers
 - In-flight reporting of aircraft and engine condition
- No lack of use cases, and much value still to be captured with better and faster answers to key questions
 - What's going on right now?
 - What exactly caused an event/problem in the past?
 - What should we do?

Rise of data analytics

- Data analytics has been talked about for years, but it turns out to be much easier said than done
- Often hard to justify near-term expense for hard-to-quantify future benefit...
- ...But now many businesses realize they can't afford to ignore data analytics so investments are being made
 - Financial capital in systems and especially people with right skills
 - Political capital to break down internal barriers and drive change

True data integration / fusion

- The promise of integrating disparate datasets to create high-value insights is widely acknowledged
- Finally becoming a reality thanks to real investment in data analytics
- Example: FlightGlobal is meshing flight status data and fleet data to:
 - calculate exact seats by cabin
 - identify which “hard product” (seats/IFE/etc.)
 - track hours and cycles on engine types
 - estimate flight-specific cargo capacity
 - ... and more

So what data should exist, but does not?

Selected Examples

	Existing	Emerging	Dreaming
Passenger	<ul style="list-style-type: none">• Booking & ticketing	<ul style="list-style-type: none">• Personalized offers	<ul style="list-style-type: none">• Firm link between shopping and buying
Cargo	<ul style="list-style-type: none">• A2A cargo tons and revenue	<ul style="list-style-type: none">• Tons and revenue by transport product (e.g., temp.-sensitive)	<ul style="list-style-type: none">• True O&D data (shipper to consignee)
Operations	<ul style="list-style-type: none">• Historical flight delays and reasons	<ul style="list-style-type: none">• Robust forecasts of flight-specific delays	<ul style="list-style-type: none">• Delay/cancel forecasts that can be used in schedule design

Market will not pay or wait for perfection

When dreaming about data that should exist, consider:

- Exactly which information would most improve the decision at hand?
- What level of precision is required to make the right decision most of the time?
- How fast/timely does the information have to be?

What do we often overlook?

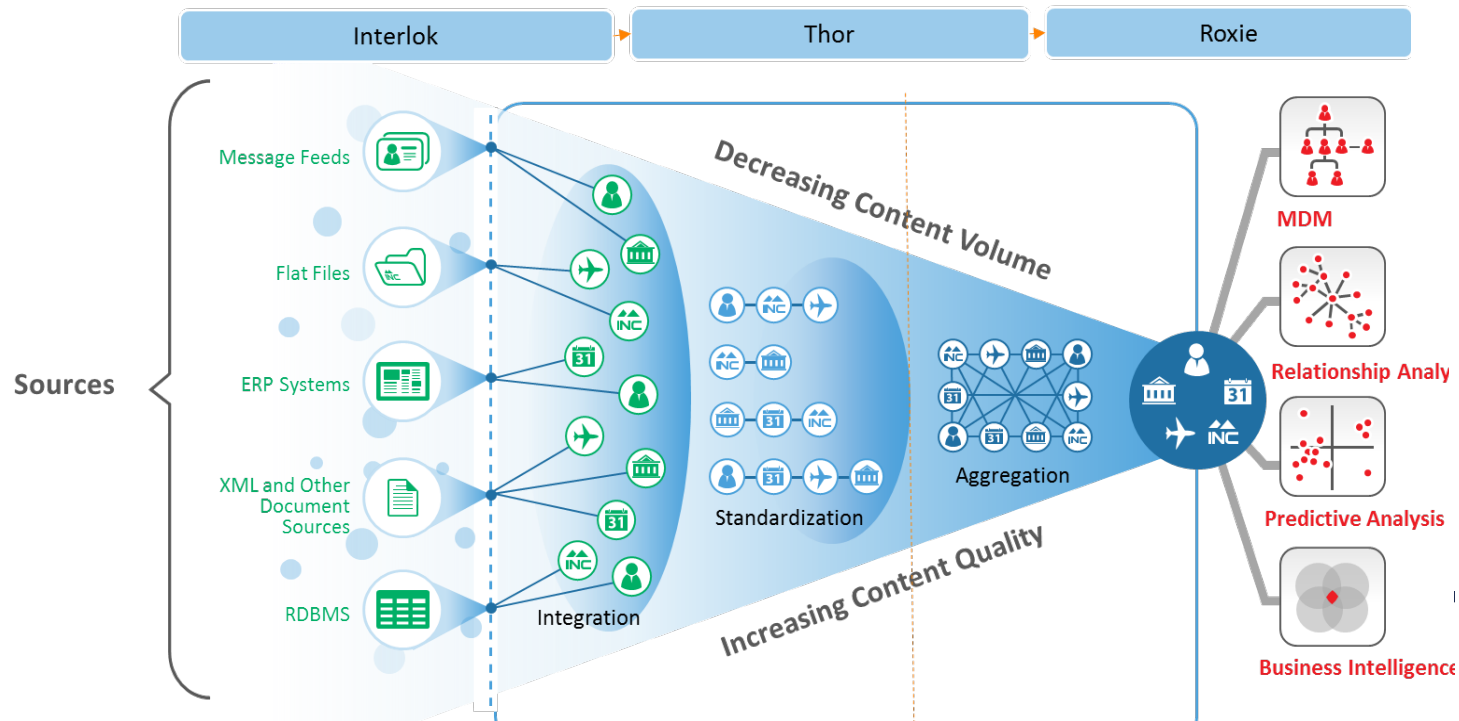

- **Critical importance of “data cleaning”**
 - Humans are still involved in much data collection which means much potential for error
 - Inconsistent data definitions impede meaningful analysis
- **Human ability to cope with data flood**
 - Despite excitement about AI/ML/DL, humans are still central to every significant decision
 - Available data can overwhelm human analysts – “can’t see forest for the trees” is not unusual
- **Need for business translators as well as data scientists**
 - Business translators combine data savvy with business and functional expertise

Real value is in joining together disparate data

Overview of Adaptris STRIKE Technology

Take-aways

- There is a lot of data
- Real value lies in joining up disparate datasets
- Don't forget the poor humans who have to make sense of the data flood!

Networking Coffee Break

LUVLines

The Employee Magazine | June 2017

Operational Reliability:

Running an Efficient and Reliable Operation

Crew Change, Dual Door Deplaning, Flight Close Standardization, and Last Off-First On

How the Operational Agility Team is working to improve operational reliability

Crew Change

How we execute crew changes is a critical part of the turn. Data told us we have opportunity to improve.

Operation: Flight Close

The process for closing a flight (last scan to door close) is highly variable. This variation impacts our On Time Performance.

Provisioning Process

Provisioning our aircraft is important to ensure Customers have what they want on each flight. We are working to eliminate transportation waste identified in this process.

ENSURE FRONT-LINE EMPLOYEES ARE INVOLVED

“It’s powerful having folks from different workgroups being able to talk in a neutral environment about the process.”

As a Flight Attendant, I never realized how detailed Ops’ responsibilities were in getting each flight pushed.

“After the kickoff I knew this project was a big deal!”

IN SUMMARY

Leverage and integrate all data available to you

Create data where you don't have data

Let the data be your guide for improvement

Engage People to round out the story
