Pharma logistics spans over production, distribution, and final delivery to healthcare facilities and pharmacies

Pharma logistics expansion driven by growing demand

Higher complexity is leading to
need for outsourced
E2E services

~5

EUR bn over next 5 years

Increasing demand for
specialty pharma needs to
be distributed

~9

EUR bn over next 5 years

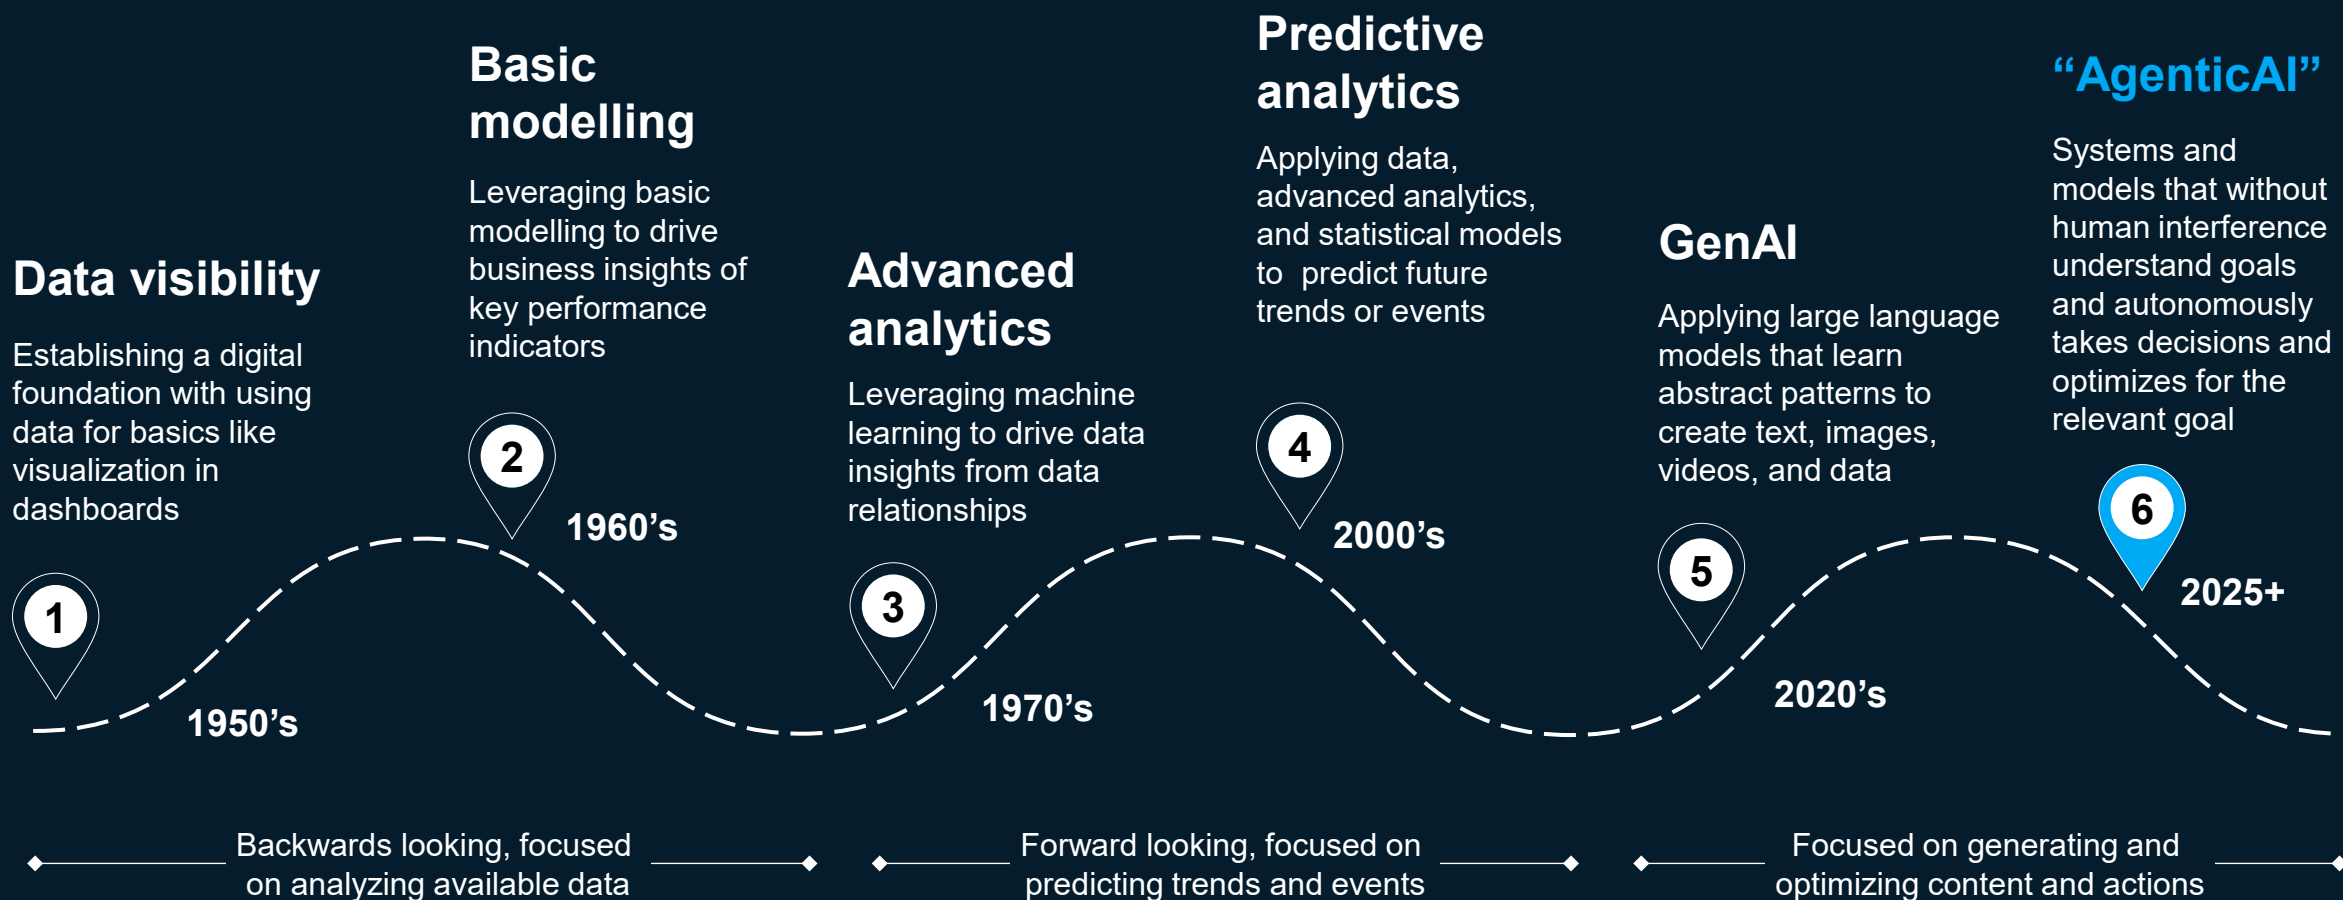

Regionalization will lead to
increased land
freight demand

~6

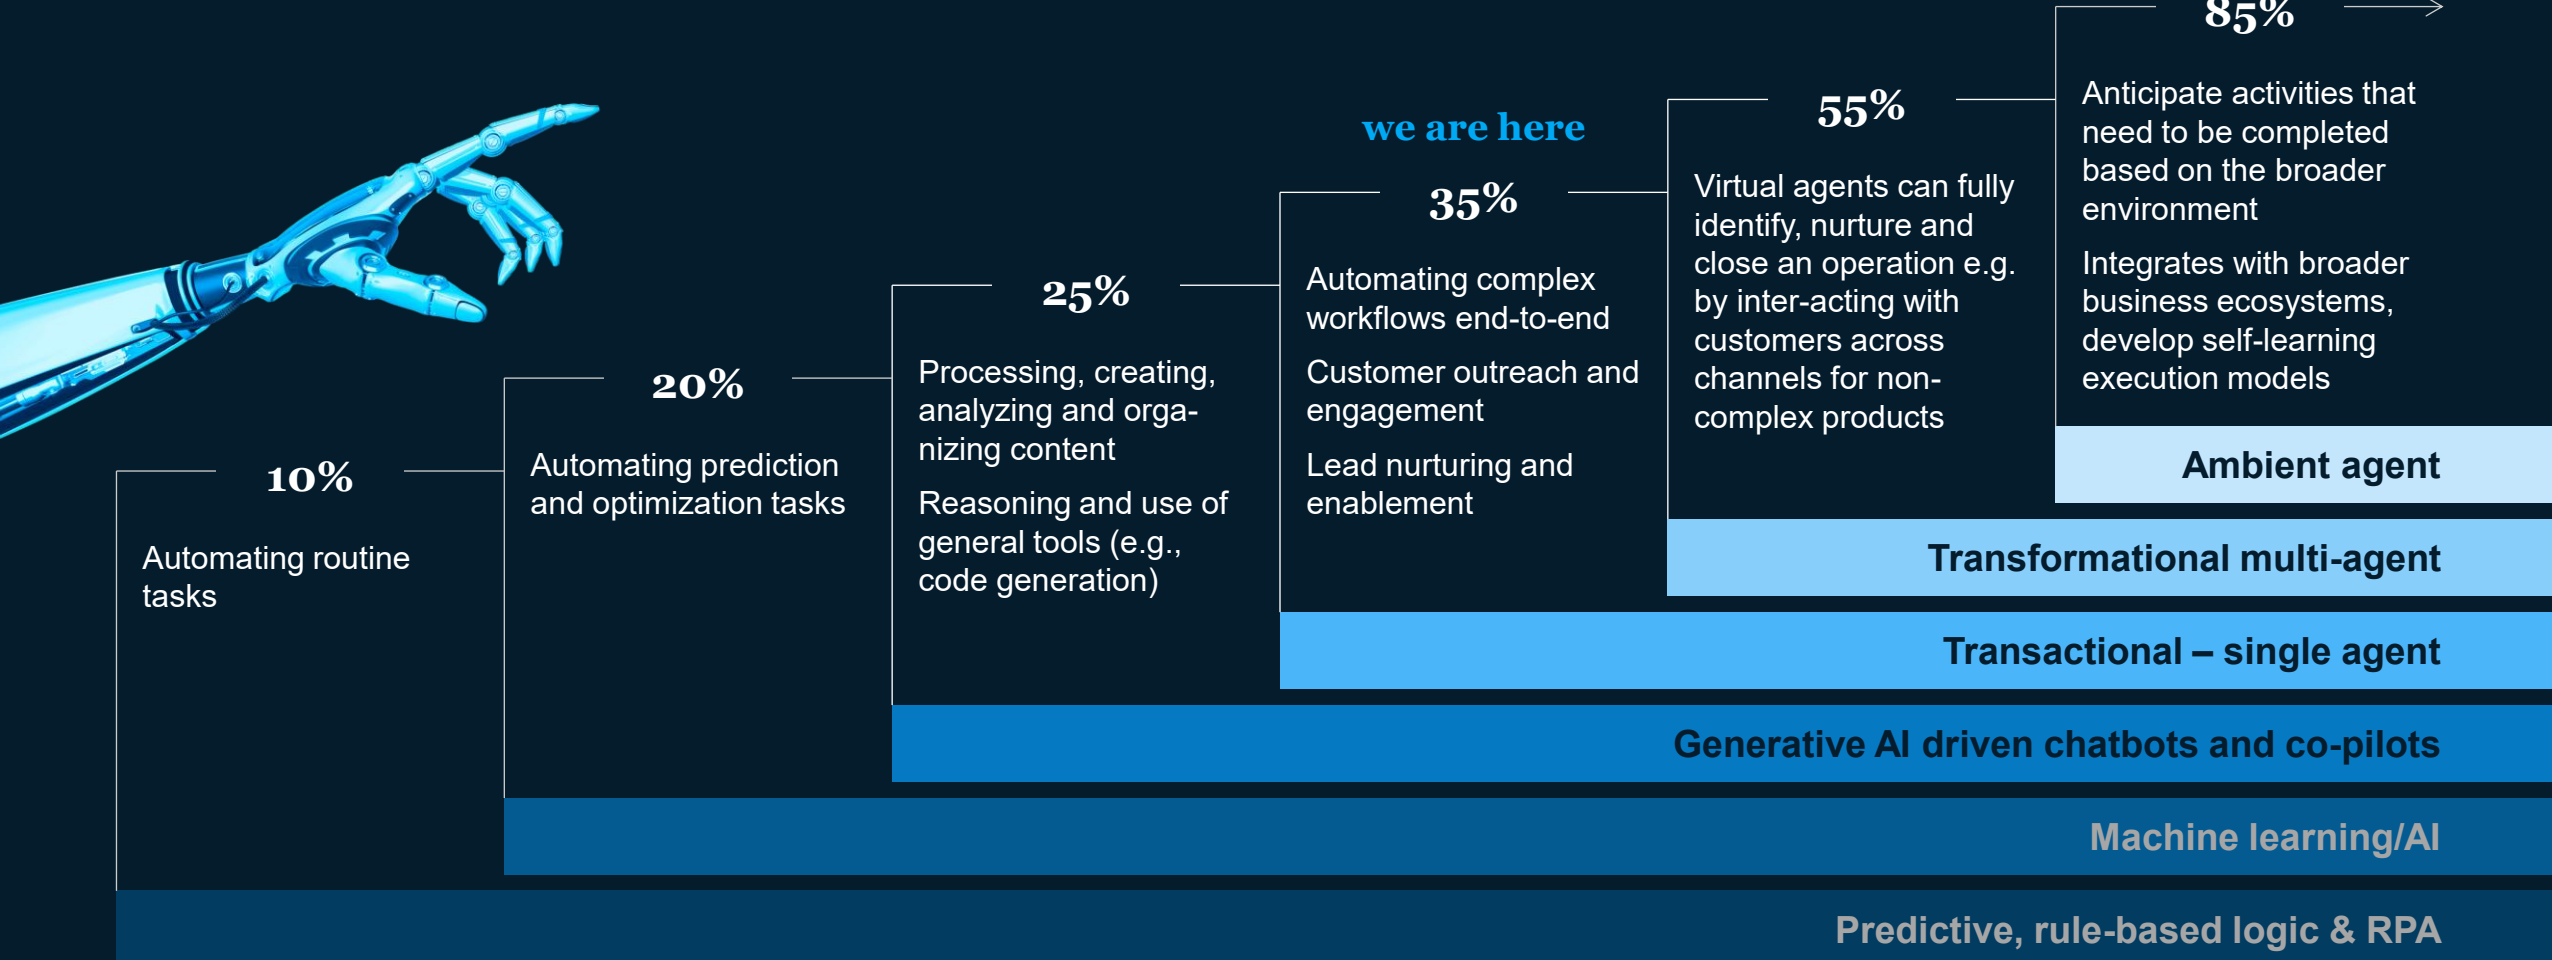

EUR bn over next 5 years

AgenticAI boosts productivity in pharma logistics

AgenticAI for adaptive task-oriented automation

xx% Estimated automation potential in logistics

Agentic AI is causing a paradigm shift from “Giving Tools to practitioners” to “Building an Agentic Workforce”

Proficient practitioner

Practitioners perform the work “manually”

1X

Raw productivity potential

Practitioner using (GenAI) Tools

Practitioners use GenAI tools and incorporate outputs into their tasks

1.2X

Raw productivity potential

Practitioner using Agent Assistants

Practitioners or events invoke Agents which create outputs or perform a task e2e

2X

Raw productivity potential

Practitioners supervising an Agentic Digital Factory

Practitioners build and supervise a virtual organization of agents. If needed, humans finalize outputs

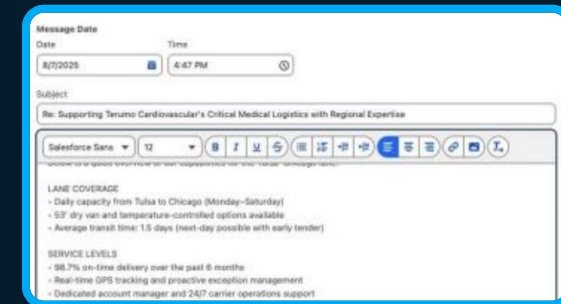

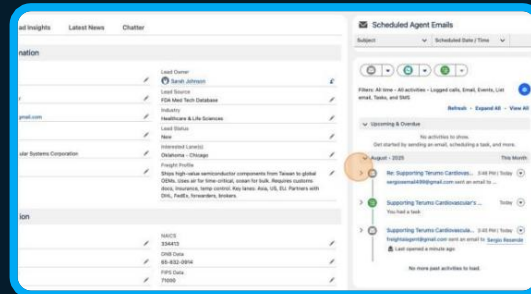

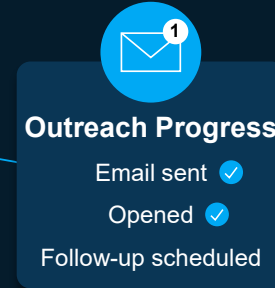

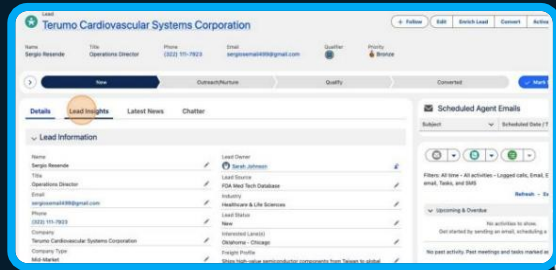

20X

Raw productivity potential

1 human supervising 15-20 agents

Example - the **Onboarding Agent** simplifies customer setup and boosts early engagement to scale adoption

Tailored onboarding journeys, automated welcome emails, milestone tracking

- 1 AI flags newly closed accounts, prioritizing those ready for onboarding
- 2 Reviews an AI-built onboarding plan, tailored to the customer's goals, industry, and usage potential
- 3 AI sends personalized welcome emails and setup instructions, prompting first actions from the customer
- 4 Milestones are tracked automatically, with AI nudging customers to complete key steps on time
- 5 AI surfaces early engagement insights to step in proactively and accelerate adoption
