The air transport sector makes a major contribution to the economy of Bangladesh

There are different ways of measuring air transport’s impact on an economy. We look at three: the jobs and spending generated by airlines and their supply chain, the flows of trade, tourism and investment resulting from users of all airlines serving the country, and the city pair connections that make these flows possible. All provide a different but illuminating perspective on the importance of air transport.

Airlines, airport operators, airport on-site enterprises (restaurants and retail), aircraft manufacturers, and air navigation service providers employ 17,000 people in Bangladesh. In addition, by buying goods and services from local suppliers the sector supported another 30,000 jobs. On top of this, the sector is estimated to support a further 17,000 jobs through the wages it pays its employees, some or all of which are subsequently spent on consumer goods and services. Foreign tourists arriving by air to Bangladesh, who spend their money in the local economy, are estimated to support an additional 65,000 jobs. In total 129,000 jobs are supported by air transport and tourists arriving by air.

...and spending

The air transport industry, including airlines and its supply chain, are estimated to support US $449 million of GDP in Bangladesh. Spending by foreign tourists supports a further US $320 million of the country’s GDP, totaling US $769 million. In total, 0.3 percent of the country’s GDP is supported by inputs to the air transport sector and foreign tourists arriving by air.

For forecasts of the industry’s GDP and jobs contribution over the next 20 years see page 4
Air transport facilitates flows of goods, investment and people

The importance of air transport to Bangladesh | 2

Air transport facilitates flows of goods, investment and people and the economy can be seen from the spending of foreign tourists and the value of exports (though note these figures include all modes of transport). A key economic flow, stimulated by good air transport connections, is foreign direct investment, creating productive assets that will generate a long-term flow of GDP.

Top five international tourist arrivals (all modes of transport) by country of residence

1. India
2. Japan
3. United States
4. United Kingdom
5. Australia

Top five busiest direct flights arrivals

1. India
2. United Arab Emirates
3. Malaysia
4. Saudi Arabia
5. Singapore

Top five busiest air cargo routes

1. Qatar
2. United Arab Emirates
3. Saudi Arabia
4. Azerbaijan
5. People’s Republic of China

Annual passenger flows by region (origin-destination, '000s)

Asia-Pacific is the largest market for passenger flows to Bangladesh, followed by the Middle East and Europe. 4.2 million passengers arrived in Bangladesh from Asia-Pacific (61.3 percent of total), 2.1 million passengers arrived from the Middle East (30.3 percent of the total) and 357 thousand passengers arrived from Europe (5.2 percent).

Air transport connects Bangladesh to cities around the world

Air transport generates benefits to consumers and the wider economy by providing speedy connections between cities. These virtual bridges in the air enable the economic flows of goods, investments, people and ideas that are the fundamental drivers of economic growth.

Map of Bangladesh’s air connectivity, by its largest markets (segment basis)

IATA’s measure of how well a country is connected to economically important cities around the world is shown above. The map shows Bangladesh’s connectivity by key regions of the world and its evolution. Bangladesh’s connections to the Middle East have grown the fastest over the five past years.

Number of international city pairs direct service in the top ten countries by passenger numbers in the world

Ease of travel, visa openness, and trade facilitation are vitally important

If air transport’s unique contribution is the bridges it creates between cities, then the flows of goods, people, investment and ideas that stimulate economic development must flow unimpeded to maximise their contribution to consumers and the wider economy. Here we measure how freely goods and people flow across borders.

Passenger facilitation and visa openness

Bangladesh’s passenger facilitation (2.3/10) scores below the average of Asia-Pacific (4.4/10). On the World Economic Forum’s Travel & Tourism Competitiveness Index, the country ranks 53rd out of 140 countries for visa openness. In all these scores, higher is better.

Measures of air cargo trade facilitation

Bangladesh’s facilitation of air cargo through its regulations ranks 117th out of 124 countries in terms of the Air Trade Facilitation Index (ATFI) and last in terms of the eFreight Friendliness Index (EFFI) globally.

Forecast scenarios for passenger traffic, jobs and GDP footprint

Air transport in Bangladesh is forecast to grow by 168% in the next 20 years under the “current trends” scenario. This would result in an additional 12.1 million passenger departures by 2038. If met, this increased demand would support approximately US $2.1 billion of GDP and around 140,000 jobs.

At the time this report was published, the Government of Bangladesh had issued retroactive Value Added Tax (VAT) assessments on airlines operating international air transport services to/from the country. These retroactive VAT assessments, dating back to 2009 and in contradiction with accepted taxation policies, cannot be reclaimed or credited and will result in a significant financial expense to airlines. To the extent this retroactive tax treatment is upheld, this will negatively impact the overall results of our analysis and lead to a reduction in overall economic benefit from air transport to the economy of Bangladesh in terms of lower GDP, jobs and investment.

1 Source: Oxford Economics (all currency is in the United States dollars at 2018 prices).
2 FDI (Foreign Direct Investment) and exports data relates to 2018, foreign tourist expenditure data relates to 2017.
3 Arrivals of non-resident tourists at national borders or in all types of accommodation establishments, by country of residence, 2014.
4 The air connectivity scores reported are total destination weighted seats per 1000 people. IATA developed the Air Connectivity Indicator calculated based on the total route capacity (in terms of seats) available at an airport weighted by the destination airport’s relative capacity (calculated as the ratio of seats available at that airport relative to the capacity at the airport with most available seats) divided by the population size of the country with a 0.15% of connectivity threshold in 2013.
5 A threshold of at least one flight per week is applied.
6 Passenger facilitation, one of the Air Transport Regulatory Competitiveness Indicators developed by IATA in 2019, looks at the ease of people moving around the globe and how the governments facilitate this process. It assesses the performance of economies on implementation of open skies agreements, advance passenger information and automatic border control systems and visa requirements.
7 Entry visa requirements for a tourism visit from worldwide source markets (10 = no visa required for visitors from all source markets, 0 = traditional visa required for visitors from every source market). Source: WEF, Travel & Tourism Competitiveness Report 2019.
8 The IATA Air Trade Facilitation index (ATFI) measures the extent to which a country facilitates air cargo through its customs and borders processes and regulations. The IATA E-freight Friendliness Index (EFFI) assesses the actual penetration of electronic transactions and documents in air cargo shipments (IATA 2019).
9 Passengers are counted as departures, including connections. The passenger forecasts are based on the IATA 20-year passenger forecast (April 2019). Data on GDP and jobs 2018 are from Oxford Economics. GDP and jobs forecasts are from IATA Economics.

All data relate to 2018 or most recent unless stated otherwise.
