

THE IMPORTANCE OF AIR TRANSPORT TO CHINESE TAIPEI

The air transport sector makes a major contribution to Chinese Taipei's economy

There are different ways of measuring air transport's impact on an economy. We look at three: the jobs and spending generated by airlines and their supply chain, the flows of trade, tourism and investment resulting from users of all airlines serving the economy, and the city pair connections that make these flows possible. All provide a different but illuminating perspective on the importance of air transport.

The air transport sector supports jobs...

Airlines, airport operators, airport on-site enterprises (restaurants and retail), aircraft manufacturers, and air navigation service providers employ 82,000 people in Chinese Taipei. In addition, by buying goods and services from local suppliers the sector supported another 59,000 jobs. On top of this, the sector is estimated to support a further 26,000 jobs through the wages it pays its employees, some or all of

which are subsequently spent on consumer goods and services. Foreign tourists arriving by air to Chinese Taipei, who spend their money in the local economy, are estimated to support an additional 311,000 jobs. In total 478,000 jobs are supported by air transport and tourists arriving by air.

...and spending

The air transport industry, including airlines and its supply chain, are estimated to support

US \$9 billion of GDP in Chinese Taipei. Spending by foreign tourists supports a further US \$12.4 billion of the GDP, totaling to US \$21.3 billion. In total, 4 percent of the GDP is supported by inputs to the air transport sector and foreign tourists arriving by air.

For forecasts of the industry's GDP and jobs contribution over the next 20 years see page 4

Air transport facilitates flows of goods, investment and people

Note: Data relate to all modes of transport / Source: UNWTO, UNCTAD and World Bank²

The most important benefits from air transport go to passengers and shippers and the spillover impacts on their businesses. The value to passengers, shippers and the economy can be seen from the spending of foreign tourists and the value of exports (though note these figures include all modes of transport). A key economic flow, stimulated by good air transport connections, is foreign direct investment, creating productive assets that will generate a long-term flow of GDP.

Air transport connects Chinese Taipei to cities around the world

Air transport generates benefits to consumers and the wider economy by providing speedy connections between cities. These virtual bridges in the air enable the economic flows of goods, investments, people and ideas that are the fundamental drivers of economic growth.

Map of Chinese Taipei's air connectivity, by its largest markets (segment basis) 4

IATA's measure of how well an economy is connected to economically important cities around the world is shown above. The map shows Chinese

Taipei's connectivity at a regional level and how it has evolved. Chinese Taipei's connections to Europe have grown the fastest over the last five years.

Ease of travel, cost competitiveness, and trade facilitation are vitally important

If air transport's unique contribution is the bridges it creates between cities, then the flows of goods, people, investment and ideas that stimulate economic development must flow unimpeded to maximise their contribution to consumers and the wider economy. Here we measure how freely goods and people flow across borders.

Passenger facilitation and cost competitiveness

Chinese Taipei's passenger facilitation (6.4/10) scores above the average of Asia-Pacific (4.7/10). On the World Economic Forum's Travel & Tourism Competitiveness Index, the Chinese Taipei ranks 37th for visa openness and 34th out of 136 economies for cost competitiveness. In all these scores and ranks, higher is better.

Measures of air cargo trade facilitation

Chinese Taipei's facilitation of air cargo through its customs' and borders' regulations ranks 39th out of 124 economies in terms of the Air Trade Facilitation Index (ATFI) and 18th out of 135 economies in terms of the eFreight Friendliness Index (EFFI) globally⁸. The Enabling Trade Index (ETI)⁹ ranks Chinese Taipei 35th out of 136 economies globally for the facilitation of the free flow of goods over borders and to its destination.

Forecast scenarios for passenger traffic, jobs and GDP footprint 10

Air transport market in Chinese Taipei is forecast under the "current trends" scenario to grow by 85% in the next 20 years. This would result in an additional 29.2 million passenger journeys by 2037. If met, this increased demand would support approximately US \$39.4 billion of GDP and around 552,800 jobs.

		PASSENGERS	03 \$ GDF	3053
2017		34.5 m	\$21.3 bn	478,163
2037	Current Trends	63.7 m	\$39.4 bn	552,811
	Upside	99 m	\$61.3 bn	868,600
	Downside	50.6 m	\$31.3 bn	436,570

- 5 Passenger facilitation, one of the Air Transport Regulatory Competitiveness Indicators developed by IATA in 2018, looks at the ease of people moving around the globe and how the governments facilitate this process. It assesses the performance of economies on implementation of open skies agreements, advance passenger information and automatic border control systems and visa requirements.
