

# THE IMPORTANCE OF AIR TRANSPORT TO ETHIOPIA

## The air transport sector makes a major contribution to Ethiopia's economy

There are different ways of measuring air transport's impact on an economy. We look at three: the jobs and spending generated by airlines and their supply chain, the flows of trade, tourism and investment resulting from users of all airlines serving the country, and the city pair connections that make these flows possible. All provide a different but illuminating perspective on the importance of air transport.

### The air transport sector supports...

Airlines, airport operators, airport on-site enterprises (restaurants and retail), aircraft manufacturers, and air navigation service providers employ 19,000 people in Ethiopia. In addition, by buying goods and services from local suppliers the sector supported another 179,000 jobs. On top of this, the sector is estimated to support a further 80,000 jobs through the wages it pays its employees, some or

all of which are subsequently spent on consumer goods and services. Foreign tourists arriving by air to Ethiopia, who spend their money in the local economy, are estimated to support an additional 815,000 jobs. In total 1.1 million jobs are supported by air transport and tourists arriving by air.

### ...and spending

The air transport industry, including airlines and its supply chain, are estimated to support

US \$1.54 billion of GDP in Ethiopia. Spending by foreign tourists supports a further US \$2.61 billion of the country's GDP, totaling to US \$4.15 billion. In total, 5.7 percent of the country's GDP is supported by inputs to the air transport sector and foreign tourists arriving by air.

*For forecasts of the industry's GDP and jobs contribution over the next 20 years see page 4*

# Air transport facilitates flows of goods, investment and people

Note: Data relate to all modes of transport. FDI figure represents inward stock.

The most important benefits from air transport go to passengers and shippers and the spillover impacts on their businesses. The value to passengers, shippers

and the economy can be seen from the spending of foreign tourists and the value of exports (though note these figures include all modes of transport). A key

economic flow, stimulated by good air transport connections, is foreign direct investment, creating productive assets that will generate a long-term flow of GDP.

### Top five international tourist arrivals (all modes of transport) by country of residence<sup>3</sup>

1. United States
2. People's Republic of China
3. United Kingdom
4. Germany
5. Italy

### Top five busiest direct flights arrivals

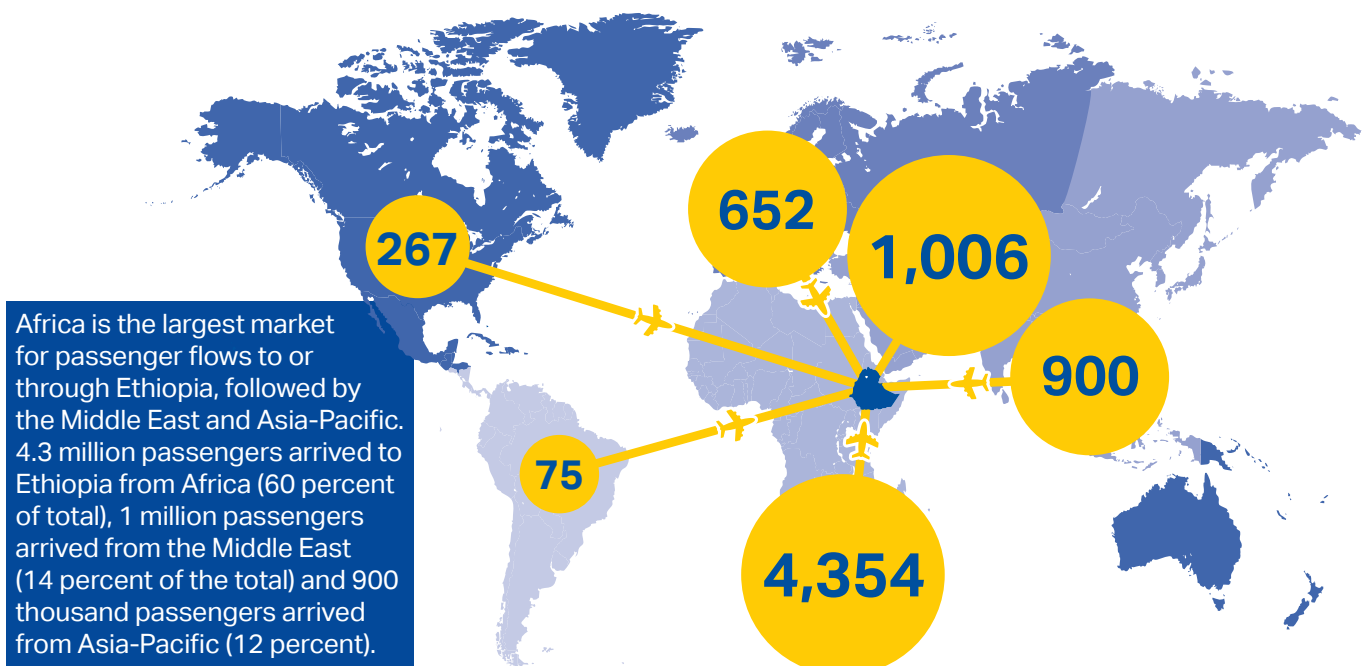

1. Kenya
2. United Arab Emirates
3. Saudi Arabia
4. India
5. People's Republic of China

### Top five busiest air cargo routes

1. Belgium
2. People's Republic of China
3. India
4. United Arab Emirates
5. Hong Kong (SAR), China

## Annual passenger flows by region (origin-destination and connecting arrivals, '000s)

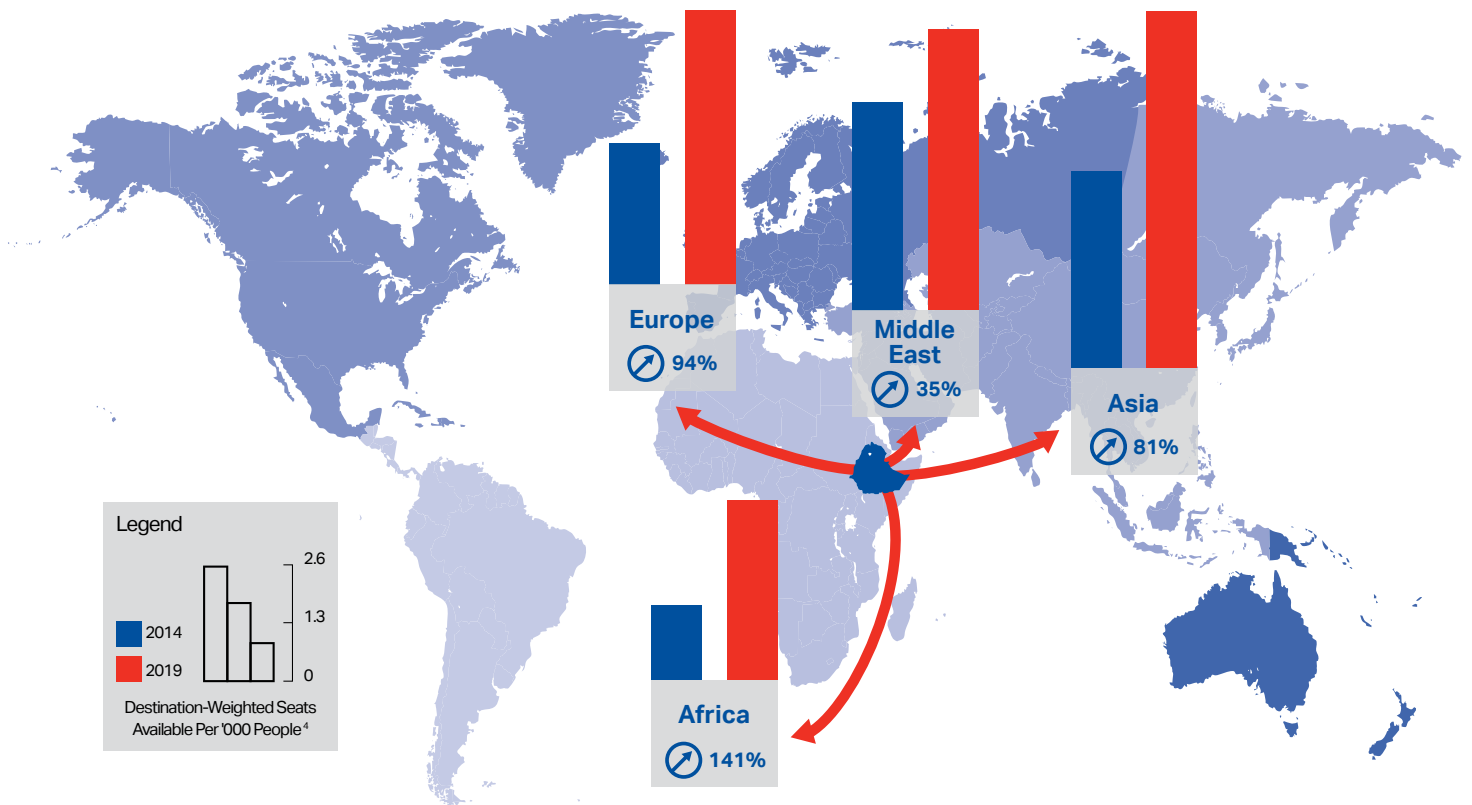

Africa is the largest market for passenger flows to or through Ethiopia, followed by the Middle East and Asia-Pacific. 4.3 million passengers arrived to Ethiopia from Africa (60 percent of total), 1 million passengers arrived from the Middle East (14 percent of the total) and 900 thousand passengers arrived from Asia-Pacific (12 percent).

# Air transport connects Ethiopia to cities around the world

Air transport generates benefits to consumers and the wider economy by providing speedy connections between cities. These virtual bridges in the air enable the economic flows of goods, investments, people and ideas that are the fundamental drivers of economic growth.

Map of Ethiopia's air connectivity, by its largest markets (segment basis)<sup>4</sup>

IATA's measure of how well a country is connected to economically important cities around the world is shown above. The map shows Ethiopia's

connectivity at a regional level and how it has evolved. Ethiopia's connections to Africa have grown the fastest over the last five years.

## Number of international city pairs direct service in the top ten countries by passenger numbers in the world

- 0 United States
- 4 People's Republic of China
- 0 Japan
- 1 United Kingdom
- 2 India
- 0 Indonesia
- 1 Spain
- 1 Germany
- 1 Brazil
- 1 France

<sup>4</sup> The air connectivity scores reported are total destination weighted seats per 1000 people. IATA developed the Air Connectivity Indicator calculated based on the total route capacity (in terms of seats available) weighted by the destination airport's relative capacity (calculated as the ratio of seats available at that airport relative to the capacity at the airport with most available seats) divided by the population size of the country with a 0.15% of connectivity threshold in 2013.

# Ease of travel, cost competitiveness, and trade facilitation are vitally important

If air transport's unique contribution is the bridges it creates between cities, then the flows of goods, people, investment and ideas that stimulate economic development must flow unimpeded to maximise their contribution to consumers and the wider economy. Here we measure how freely goods and people flow across borders.

## Passenger facilitation and cost competitiveness

On the World Economic Forum's Travel & Tourism Competitiveness Index, Ethiopia ranks 44<sup>th</sup> for visa openness and 55<sup>th</sup> out of 136 countries for cost competitiveness. In all these scores and ranks, higher is better.

## Measures of air cargo trade facilitation

Ethiopia's facilitation of air cargo through its customs' and borders' regulations ranks 86<sup>th</sup> out of 124 countries in terms of the Air Trade Facilitation Index (ATFI) and 42<sup>nd</sup> out of 135 countries in terms of the eFreight Friendliness Index (EFFI) globally<sup>8</sup>. The Enabling Trade Index (ETI)<sup>9</sup> ranks Ethiopia 117<sup>th</sup> out of 136 countries globally for the facilitation of the free flow of goods over borders and to its destination.

\* Since 2019, Ethiopia has relaxed its visa requirements by introducing the e-visa and visa on arrival policy. This policy has the potential to positively affect the visa requirement score.

# Forecast scenarios for passenger traffic, jobs and GDP footprint<sup>10</sup>

Air transport market in Ethiopia is forecast under the "current trends" scenario to grow by 226% in the next 20 years. This would result in an additional 16.3 million passenger journeys by 2037. If met, this increased demand would support approximately US \$13.5 billion of GDP and almost 2 million jobs.

	PASSENGERS	US \$ GDP	JOBS
<b>2017</b>	<b>7.2 m</b>	<b>\$4.2 bn</b>	<b>1.1 m</b>
<b>2037</b>	Current Trends	\$13.5 bn	2 m
	Upside	\$14.9 bn	2.2 m
	Downside	\$11.6 bn	1.7 m
