

THE IMPORTANCE OF AIR TRANSPORT TO SPAIN

The air transport sector makes a major contribution to Spain's economy

There are different ways of measuring air transport's impact on an economy. We look at three: the jobs and spending generated by airlines and their supply chain, the flows of trade, tourism and investment resulting from users of all airlines serving the country, and the city pair connections that make these flows possible. All provide a different but illuminating perspective on the importance of air transport.

The air transport sector supports...

Airlines, airport operators, airport on-site enterprises (restaurants and retail), aircraft manufacturers, and air navigation service providers employ 269,000 people in Spain. In addition, by buying goods and services from local suppliers the sector supported another 163,000 jobs. On top of this, the sector is estimated to support a further 98,000 jobs through the wages it pays its employees, some or

all of which are subsequently spent on consumer goods and services. Foreign tourists arriving by air to Spain, who spend their money in the local economy, are estimated to support an additional 1.2 million jobs. In total 1.7 million jobs are supported by air transport and tourists arriving by air.

...and spending

The air transport industry, including airlines and its supply chain, are estimated to support

US \$35.1 billion of GDP in Spain. Spending by foreign tourists supports a further US \$78.1 billion of the country's GDP, totaling to US \$113.2 billion. In total, 9.2 percent of the country's GDP is supported by inputs to the air transport sector and foreign tourists arriving by air.

For forecasts of the industry's GDP and jobs contribution over the next 20 years see page 4

Air transport facilitates flows of goods, investment and people

Note: Data relate to all modes of transport / Source: UNWTO, UNCTAD and World Bank²

The most important benefits from air transport go to passengers and shippers and the spillover impacts on their businesses. The value to passengers, shippers

and the economy can be seen from the spending of foreign tourists and the value of exports (though note these figures include all modes of transport). A key

economic flow, stimulated by good air transport connections, is foreign direct investment, creating productive assets that will generate a long-term flow of GDP.

Air transport connects Spain to cities around the world

Air transport generates benefits to consumers and the wider economy by providing speedy connections between cities. These virtual bridges in the air enable the economic flows of goods, investments, people and ideas that are the fundamental drivers of economic growth.

Map of Spain's air connectivity, by its largest markets (segment basis)⁴

IATA's measure of how well a country is connected to economically important cities around the world is shown above. The map shows Spain's connectivity

at a regional level and how it has evolved. Spain's connections to Asia-Pacific have grown the fastest, admittedly from a low base, over the last five years.

Number of international city pairs direct service in the top ten countries by passenger numbers in the world

- 28 United States
- 7 People's Republic of China
- 1 Japan
- 319 United Kingdom
- 1 India
- 0 Indonesia
- Spain
- 254 Germany
- 5 Brazil
- 148 France

⁴ The air connectivity scores reported are total destination weighted seats per 1000 people. IATA developed the Air Connectivity Indicator calculated based on the total route capacity (in terms of seats available) weighted by the destination airport's relative capacity (calculated as the ratio of seats available at that airport relative to the capacity at the airport with most available seats) divided by the population size of the country with a 0.15% of connectivity threshold in 2013.

Ease of travel, cost competitiveness, and trade facilitation are vitally important

If air transport's unique contribution is the bridges it creates between cities, then the flows of goods, people, investment and ideas that stimulate economic development must flow unimpeded to maximise their contribution to consumers and the wider economy. Here we measure how freely goods and people flow across borders.

Passenger facilitation and cost competitiveness

Spain's passenger facilitation (4.5/10) scores above the European average (4.1/10). On the World Economic Forum's Travel & Tourism Competitiveness Index, the country ranks 73rd for visa openness and 44th out of 136 countries for cost competitiveness. In all these scores and ranks, higher is better.

Measures of air cargo trade facilitation

Spain's facilitation of air cargo through its customs' and borders' regulations ranks 33rd out of 124 countries in terms of the Air Trade Facilitation Index (ATFI) and 17th out of 135 countries in terms of the eFreight Friendliness Index (EFFI) globally⁸. The Enabling Trade Index (ETI)⁹ ranks Spain 15th out of 136 countries globally for the facilitation of the free flow of goods over borders and to its destination.

Forecast scenarios for passenger traffic, jobs and GDP footprint¹⁰

Air transport market in Spain is forecast under the "current trends" scenario to grow by 49% in the next 20 years. This would result in an additional 59.4 million passenger journeys by 2037. If met, this increased demand would support approximately US \$168.6 billion of GDP and around 2.2 million jobs.

	PASSENGERS	US \$ GDP	JOBS
2017	121.6 m	\$113.2 bn	1.71 m
2037	Current Trends	\$168.6 bn	2.2 m
	Upside	\$179.1 bn	2.3 m
	Downside	\$147.1 bn	1.91 m

⁵ Passenger facilitation, one of the Air Transport Regulatory Competitiveness Indicators developed by IATA in 2018, looks at the ease of people moving around the globe and how the governments facilitate this process. It assesses the performance of economies on implementation of open skies agreements, advance passenger information and automatic border control systems and visa requirements.
⁶ Entry visa requirements for a tourism visit from worldwide source markets (10 = no visa required for visitors from all source markets, 0 = traditional visa required for visitors from every source market). Source: WEF, Travel & Tourism Competitiveness Report 2017.
⁷ Based on ticket taxes, airport charges and VAT (10=low cost, 0=high cost). Source: WEF, Travel & Tourism Competitiveness Report 2017.
⁸ The IATA Air Trade Facilitation Index (ATFI) measures the extent to which a country facilitates air cargo through its customs and borders processes and regulations. The IATA E-freight Friendliness Index (EFFI) assesses the actual penetration of electronic transactions and documents in air cargo shipments (Value of Air Cargo 2016 report).
⁹ The Enabling Trade Index (ETI), developed by the World Economic Forum, assesses the performance of 136 economies on domestic and foreign market access; border administration; transport and digital infrastructure; transport services; and operating environment. The ETI is featured in The Global Enabling Trade Report 2016.
¹⁰ Passengers are counted as departures, including connections. The passenger forecasts are based on the IATA 20-year passenger forecast (October 2018). Data on GDP and jobs 2017 are from Oxford Economics. GDP and jobs forecasts are from IATA Economics.
