Connecting things with RFID

Jos de Kleine
Manager Logistic Development

Seattle 15/11/2016
We were constantly facing three questions:

1. What (process, product)?
2. How (to do)?
3. Where (are my assets)?
Shop Logistic Agent Transport Supplier, Customer Present Operation level

Suppliers, Customers

RFID (Where and What)
Location and detailed information

J. de Kleine Manager
KLM logistic development
IATA 2016 Seattle
What have we accomplished so far?

- In a joint effort, Nefab and KLM have developed a Web-based Aviation Packaging Information System (APIS)
- 50% of reduction in the costs of packaging
- Better insight in the expenses made for the other 50% of the costs
- Standardization in packaging and its process
- Direct information available for the users (how to pack a certain item) KPI’s set with the supplier NEFAB
- We can track and trace the location of equipment and are in the process of preparing our products and processes with RFID
- Everything is measurable
- We are expanding global for the supply chain
- We are introducing RFID in several other products.
Standardization / legislation

- Rule makers (FAA/ JAA etc.)
- OEM/OAM (Boeing, Airbus, Honeywell, etc.)
- Airlines
- Third parties, vendors, GS1, Spec2000

Central question

How much rules do we need

More Rules equals more cost
Thank you
