Digital Cargo

e-freight*

- ↗ e-SDDG “dangerous goods declaration” → 3 e-pilots
- ↗ e-AWB 360 – single process in 37 airports (31 airlines)
- ↗ Cargo XML → e-Customs
 - ↗ MoU with UNCTAD on ASYCUDA
 - ↗ World Customs Organization: Cargo Targeting System

** e-Freight aims to remove all paper processes from airfreight. Main focus is on the AWB → e-AWB*

State of e-AWB usage

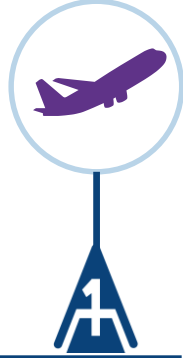

ONE Record: data standard

- Common semantic standard for air freight
- Targets end-to-end transport chain
 - Include *all* stakeholders
- Create virtual single shipment record
 - Avoid duplication and improve data quality
 - Pursue “documents as output” rather than input

ONE Record: API standard

- ONE Record API is the “USB cable” for air freight transport
- Allows for self-service access to freight data
- Create opportunities for transparency and easy of connectivity
- Connect with existing and new digital platforms

Digital Cargo

- ONE Record facilitates innovation
- Full and flexible integration with e-commerce platforms
- Global plug & play supply chains
- New partnerships and e-business ecosystems
