The air transport sector makes a major contribution to Germany’s economy

There are different ways of measuring air transport’s impact on an economy. We look at three: the jobs and spending generated by airlines and their supply chain, the flows of trade, tourism and investment resulting from users of all airlines serving the country, and the city pair connections that make these flows possible. All provide a different but illuminating perspective on the importance of air transport.

The air transport sector supports...

Airlines, airport operators, airport on-site enterprises (restaurants and retail), aircraft manufacturers, and air navigation service providers employ 315,000 people in Germany. In addition, by buying goods and services from local suppliers the sector supported another 337,000 jobs. On top of this, the sector is estimated to support a further 189,000 jobs through the wages it pays its employees, some or all of which are subsequently spent on consumer goods and services. Foreign tourists arriving by air to Germany, who spend their money in the local economy, are estimated to support an additional 299,000 jobs. In total 1.1 million jobs are supported by air transport and tourists arriving by air.

...and spending

The air transport industry, including airlines and its supply chain, are estimated to support US $68 billion of GDP in Germany. Spending by foreign tourists supports a further US $18 billion of the country’s GDP, totaling to US $86 billion. In total, 2.5 percent of the country’s GDP is supported by inputs to the air transport sector and foreign tourists arriving by air.
Air transport facilitates flows of goods, investment and people

The importance of air transport to Germany | 2

Air transport facilitates flows of goods, investment and people and the economy can be seen from the spending of foreign tourists and the value of exports (though note these figures include all modes of transport). A key economic flow, stimulated by good air transport connections, is foreign direct investment, creating productive assets that will generate a long-term flow of GDP.

The most important benefits from air transport go to passengers and shippers and the spillover impacts on their businesses. The value to passengers, shippers and the economy can be seen from the spending of foreign tourists and the value of exports (though note these figures include all modes of transport). A key economic flow, stimulated by good air transport connections, is foreign direct investment, creating productive assets that will generate a long-term flow of GDP.

Annual passenger flows by region (origin-destination, ’000s)

Europe is the largest market for passenger flows to and from Germany, followed by Asia-Pacific and North America. 79.6 million passengers arrived from Europe (81.6 percent of the total), 6.2 million passengers arrived to Germany from Asia-Pacific (6.4 percent) and 4.5 million passengers arrived from North America (4.6 percent).

Arrivals of non-resident tourists at national borders or in all types of accommodation establishments, by country of residence.
Air transport connects Germany to cities around the world

Air transport generates benefits to consumers and the wider economy by providing speedy connections between cities. These virtual bridges in the air enable the economic flows of goods, investments, people and ideas that are the fundamental drivers of economic growth.

IATA’s measure of how well a country is connected to economically important cities around the world is shown above. The map shows Germany’s connectivity at a regional level and how it has evolved. Germany’s connections to the Middle East have grown the fastest over the last five years.

Number of international city pairs direct service in the top ten countries by passenger numbers in the world

- United States: 60
- People’s Republic of China: 12
- Japan: 6
- United Kingdom: 6
- India: 7
- Indonesia: 7
- Spain: 6
- Germany: 5
- Brazil: 6
- France: 87

Source: IATA, Aviation Benefits Beyond Borders 2018 report

*The air connectivity scores reported are total destination weighted seats per 1000 people. IATA developed the Air Connectivity Indicator calculated based on the total route capacity (in terms of seats available) weighted by the destination airport’s relative capacity (calculated as the ratio of seats available at that airport relative to the capacity at the airport with most available seats) divided by the population size of the country with a 0.15% of connectivity threshold in 2013.
Ease of travel, cost competitiveness, and trade facilitation are vitally important

If air transport’s unique contribution is the bridges it creates between cities, then the flows of goods, people, investment and ideas that stimulate economic development must flow unimpeded to maximise their contribution to consumers and the wider economy. Here we measure how freely goods and people flow across borders.

Passenger facilitation and cost competitiveness

Germany’s passenger facilitation (4.8/10) scores above the European average (4.1/10). On the World Economic Forum’s Travel & Tourism Competitiveness Index, the country ranks 73rd for visa openness and 90th out of 136 countries for cost competitiveness. In all these scores and ranks, higher is better.

Air transport market in Germany is forecast under the “current trends” scenario to grow by 49% in the next 20 years. This would result in an additional 57.3 million passenger journeys by 2037. If met, this increased demand would support approximately US $128 billion of GDP and almost 1.4 million jobs.

Measures of air cargo trade facilitation

Germany’s facilitation of air cargo through its customs’ and borders’ regulations ranks 17th out of 124 countries in terms of the Air Trade Facilitation Index (ATFI) and 16th out of 135 countries in terms of the eFreight Friendliness Index (EFFI) globally. The Enabling Trade Index (ETI) ranks Germany 9th out of 136 countries globally for the facilitation of the free flow of goods over borders and to its destination.

Forecast scenarios for passenger traffic, jobs and GDP footprint

Air transport market in Germany is forecast under the “current trends” scenario to grow by 49% in the next 20 years. This would result in an additional 57.3 million passenger journeys by 2037. If met, this increased demand would support approximately US $128 billion of GDP and almost 1.4 million jobs.
