The air transport sector makes a major contribution to Mexico’s economy

There are different ways of measuring air transport’s impact on an economy. We look at three: the jobs and spending generated by airlines and their supply chain, the flows of trade, tourism and investment resulting from users of all airlines serving the country, and the city pair connections that make these flows possible. All provide a different but illuminating perspective on the importance of air transport.

For forecasts of the industry’s GDP and jobs contribution over the next 20 years see page 4.
Air transport facilitates flows of goods, investment and people

The importance of air transport to Mexico

Air transport facilitates flows of goods, investment and people and the economy can be seen from the spending of foreign tourists and the value of exports (though note these figures include all modes of transport). A key economic flow, stimulated by good air transport connections, is foreign direct investment, creating productive assets that will generate a long-term flow of GDP.

4. Netherlands
5. Spain

North America is the largest market for passenger flows to and from Mexico, followed by Latin America and Europe. 60.4 million passengers arrived from North America (91.2 percent of the total), 3.2 million passengers arrived to Mexico from Latin America (4.8 percent) and 2.3 passengers arrived from Europe (3.4 percent).

Air transport connects Mexico to cities around the world

Air transport generates benefits to consumers and the wider economy by providing speedy connections between cities. These virtual bridges in the air enable the economic flows of goods, investments, people and ideas that are the fundamental drivers of economic growth.

Map of Mexico’s air connectivity, by its largest markets (segment basis)

IATA’s measure of how well a country is connected to economically important cities around the world is shown above. The map shows Mexico’s connectivity at a regional level and how it has evolved. Mexico’s connections to Latin America have grown the fastest over the last five years.

* The air connectivity scores reported are total destination weighted seats per 1000 people. IATA developed the Air Connectivity Indicator calculated based on the total route capacity (in terms of seats available) weighted by the destination airport’s relative capacity (calculated as the ratio of seats available at that airport relative to the capacity at the airport with most available seats) divided by the population size of the country with a 0.15% of connectivity threshold in 2013.
The importance of air transport to Mexico | 4

Ease of travel, cost competitiveness, and trade facilitation are vitally important

If air transport’s unique contribution is the bridges it creates between cities, then the flows of goods, people, investment and ideas that stimulate economic development must flow unimpeded to maximise their contribution to consumers and the wider economy. Here we measure how freely goods and people flow across borders.

Passenger facilitation and cost competitiveness

Mexico’s passenger facilitation (4/10) scores slightly below the Latin American average (4.1/10). On the World Economic Forum’s Travel & Tourism Competitiveness Index, the country ranks 105th for visa openness and 89th out of 136 countries for cost competitiveness. In all these scores and ranks, higher is better.

Measures of air cargo trade facilitation

Mexico’s facilitation of air cargo through its customs and borders regulations ranks 74th out of 124 countries in terms of the Air Trade Facilitation Index (ATFI) and 47th out of 135 countries in terms of the eFreight Friendliness Index (EFFI) globally. The Enabling Trade Index (ETI) ranks Mexico 51st out of 136 countries globally for the facilitation of the free flow of goods over borders and to its destination.

Forecast scenarios for passenger traffic, jobs and GDP footprint

Air transport market in Mexico is forecast under the “current trends” scenario to grow by 104% in the next 20 years. This would result in an additional 69.7 million passenger journeys by 2037. If met, this increased demand would support approximately US $76.1 billion of GDP and almost 2.3 million jobs.
