Security is everyone’s responsibility.

Apply the SeMS Manual to foster all-encompassing security processes & culture in your organization.

Developed with our industry partners, SeMS focuses on essential aspects of security management, including accountabilities, responsibility assignment, risk assessment and improved communication.

The goal of this brand new guidance material is to assist entities in building effective aviation security measures through a standardized structure.

The SeMS Manual replaces the Security Manual. For an overview of where content has been relocated or kept within the new SeMS Manual, please visit our website.

In this new edition:

- A brand new form to harmonize security reporting supported by AVSEC specialists
- Airline case studies on SeMS implementation
- Revised and improved risk assessment methodology
- Security objectives and security key performance indicators (KPIs)
- Renewed guidance on landside security
