Security is everyone’s responsibility

Apply the SeMS Manual to foster all-encompassing security processes & culture in your organization.

Developed with our industry partners, SeMS focuses on essential aspects of security management, including accountabilities, responsibility assignment, risk assessment and improved communication.

The goal of this updated material is to assist entities in building effective aviation security measures through a standardized structure.

In this new edition:

- New chapter on capacity calculations to manage & optimize security checkpoints
- A Threat & Risk Audit Matrix (TRAM) interactive software package demo
- A threat assessment form
- New section on operational risk assessment
- General updates, including categories of aviation security occurrences as well as the SeMS checklist
